

Jing-Zhang Intelligence Spine: An AI Innovation Commons for Everyday Life

Three zones, two wings • One belt, three cores • Open scenarios • A civic commons

All figures and metrics in this booklet derive from submitted provisional geometry. This is a concept proposal: not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

With Jing-Zhang heritage park as the civic spine, the proposal links Zhongzhiyuan full-stack innovation, the AI Origin Community campus transfer, and the Dazhongsi international salon, together with the Zhongguancun tech-service wing and the Xiaoyuehe scenario wing, into a three-zone two-wing loop. Core promise: put people and the public interest into the AI city first — 10 scenario cards, 3 industrial test validations and 6 renewal projects, all under data minimization, clear notice, human review, opt-out and non-discrimination.

资料证据链与提交包关系图 / Evidence chain and package relationship

Renewal Projects and Operations Ledger

Project	Proposed responsible parties	Preconditions and deliverables	Maintenance, feedback and stop conditions
JZ-01 Slow-mobility gap stitching	Transport/park management, design team	Road redlines, under-bridge space, accessibility review; route and node concept drawings	Quarterly inspection, on-site feedback; no implementation without safety review
JZ-02 Qinghe innovation interface	River/park management, community, ecology team	Blue-line, flood and ecology conditions; reversible activities and waterfront concepts	Rainy-season review, ecology monitoring; withdrawn if flood control or ecology is affected
JZ-03 Campus transfer street	Property/campus/block bodies, service agencies	Ownership, ground-floor programs, fire safety; service catalogue and walking-interface proposals	Monthly merchant/resident feedback; no retrofit without permits
JZ-04 Dazhongsi station links	Station/road management, accessibility team	Station permit, signals, utilities; accessible routes and wayfinding prototypes	Peak observation, complaint closure; offline on misleading guidance or safety risk
JZ-05 AI service & edge nodes	Public-service operator, energy/safety team	Equipment, energy, network, data and fire review; removable service nodes	Public maintenance list; stop if human takeover fails or energy is abnormal
JZ-06 Annual public route	Community organizations, event organizers, space managers	Site permits, rights list, accessibility and safety plans; route and instructions	After-event retrospectives; not renewed if complaints or safety issues stay open

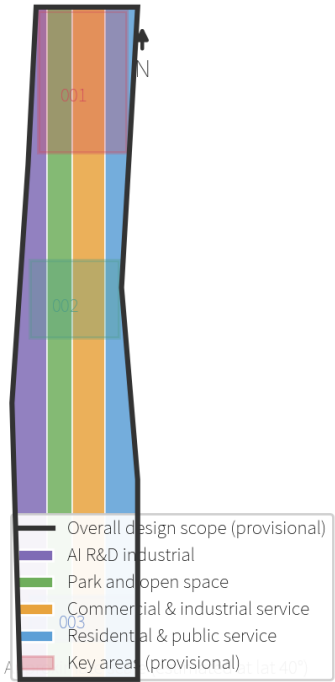

Three-Level Scope and Spatial Framework

All figures and metrics in this booklet derive from submitted provisional geometry. This is a concept proposal: not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

Level	Design question	Proposal response
Research scope 43.6 km ² (per announcement)	AI industrial ecosystem and future urban form	Innovation chain: universities -> open source -> enterprise -> public experience -> international outreach
Overall design scope 11.4 km ²	Renewal framework, industrial space, transport/municipal support, character control	Land use / buildings / roads / green / public space / phasing layers
Key areas 368.4 ha (three)	Programs, building scale, retain-renovate-remove, public space, transport	Zhongzhiyuan / AI Origin Community / Dazhongsi, separate layers and metrics

Drawn from submitted provisional geometry only; not an official redline or approval basis

Three-Level Scope and Spatial Framework

Research scope 43.6 km² (per announcement)
统筹研究 → 创新链与城市形态

Overall design scope 11.4 km²
总体设计 → 更新框架与设施承载

Key areas 368.4 ha
重点区域 → 功能业态与公共空间

Concept proposal • Provisional boundary • Not statutory planning • Recompute when official geometry is published

Key Areas and Design Tasks

All figures and metrics in this booklet derive from submitted provisional geometry. This is a concept proposal: not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

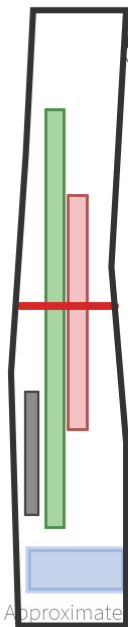

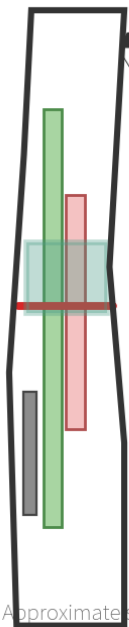

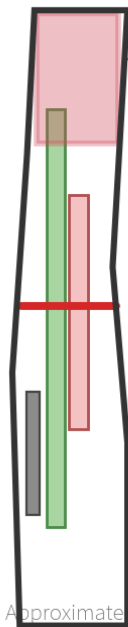

Key Area Index and Design Tasks

Submitted provisional geometry only; not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

Zhongzhiyuan AI acceleration area

Beijing AI Origin Community

Dazhongsi AI industry cluster

Submitted provisional geometry only; not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

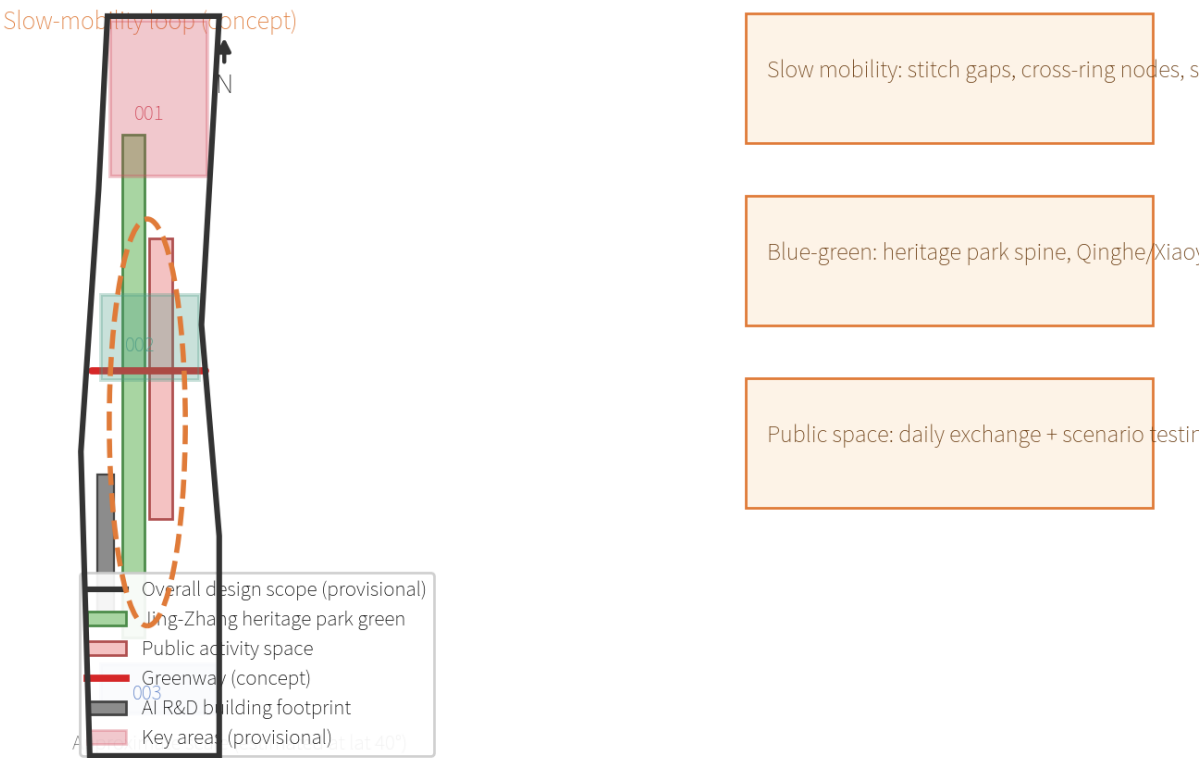

Garden-type full-stack innovation block: Qinghai center for industry display, low-carbon exchange

Workplace center for transfer and talent community: slow-mobility stitching, open-source collaboration

Urban intelligent-economy block: station-city integration, four-quadrant walking links

Drawn from submitted provisional geometry only; not an official redline or approval basis

Mobility, Blue-Green and Public Space System

Concept proposal • Provisional boundary • Not statutory planning • Recompute when official geometry is published

Scenario Cards and Industrial Validation

10 scenario cards (concept): slow-mobility navigation, accessibility assistance, open-source release, employment & startup services, low-carbon O&M,, public learning, cultural interpretation, health & sports, consumption assistance, event safety. Each card defines service users, spatial carrier, trigger conditions, data minimization, human review and opt-out path.

3 industrial validation scenarios: trusted AI public-service sandbox, edge-computing low-carbon synergy, station-city service coordination. All require professional, safety, data and operational authorization, with reversible pilots and stop conditions.

全球 AI 创新生态案例 / Global AI innovation ecosystem cases

Case	Verifiable facts	Lessons for Jing-Zhang	Source
Station F (Paris)	Former freight hall converted into the world's largest startup campus, ~34,000 m², with an AI program	Railway heritage into innovation public space; corporate-university incubation	stationf.co
Kendall Square (Cambridge)	One of the world's densest innovation districts around MIT; mixed research-housing-retail-museum approved	University-anchored mixed block; public hearings and community fund	news.mit.edu
MaRS (Toronto)	Former hospital heritage building converted into one of North America's largest urban innovation centres	Heritage reuse + public-institution anchoring	marsdd.com
Punggol Digital District (Singapore)	~50 ha smart district merging seamlessly with a university campus; district digital backbone + smart grid	District digital backbone and low-carbon energy coordination	jtc.gov.sg
King's Cross (London)	Railway lands regenerated into a knowledge quarter hosting Google DeepMind and the Alan Turing Institute	Railway-corridor regeneration and international AI cluster; joint public governance	ucl.ac.uk / kingscross.co.uk

区域协同（建议口径） / Regional coordination (proposals only)

Target	Resource interface	Activity channel	Outcome transfer
Beiwai and surrounding communities	Community service stations and shared public space	Open seats at four-season events, resident observers	Scenario feedback enters annual revision
Future Science City	Energy and low-carbon technology exchange	Proposed autumn-forum professional track	Mutual learning on edge-compute low-carbon synergy
Huairou Science City	Big-science-facility outreach content	Proposed joint winter public-technology exhibition	Outreach and public-learning content transfer
Beijing E-Town	Smart-terminal and robotics display cooperation	Proposed joint Open Source Spring showcase	Proposed scenario-opening catalogue exchange
Beijing-Tianjin-Hebei institutions	International-outreach and talent-channel sharing	Proposed international visitor route linkage	Forum outcomes deposited publicly

Public-participation feedback loop (concept): four channels - on-site desks, paper inquiries, online forms, anonymous boxes; no registration required; targets: acceptance within 5 working days, public reply within 30 days; quarterly aggregated statistics; annual revisions publish an adopted-feedback list; base metrics are complaint closure rate, response timeliness and opt-out success rate. All regional coordination items are proposals, not confirmed arrangements.

Metrics Recalculation and Evidence Chain

All figures and metrics in this booklet derive from submitted provisional geometry. This is a concept proposal: not an official redline, statutory control, approval basis, or government commitment. Recompute in full once official geometry is published.

Core Metrics Recalculation and Evidence Chain

指标 / Metric	值 / Value	状态 / Status	置信度 / Confidence
Site area (m²)	11,412,825.4	known	provisional
Building footprint (m²)	310,807.2	known	provisional
Green ratio	0.1	known	provisional
Public space ratio	0.1	known	provisional
FAR	unknown	unknown	unknown
Key area count	3	known	provisional

confidence=provisional: all values recomputed from provisional geometry; recompute on official boundary

Concept proposal • Provisional boundary • Not statutory planning • Recompute when official geometry is published

Risk, Rights and Recompute Commitment

This proposal claims no official approval, statutory control, final land ownership, final building volume or implementation guarantee. All missing-data items (official boundary, key areas, regulatory plan, roads, plots, buildings, utilities, heritage, public services) are recorded in assumptions.json and the self-check risk section; any conclusion lacking official conditions is downgraded to pending confirmation. Asset sources and licenses are listed in sources.json and report/copyright_statement.md.
