

AI Green Nerve Loop: Urban Design Proposal for the Centennial Jing-Zhang AI Innovation Belt

One belt · three cores · two wings · multiple nodes · open co-creation concept

A north-south AI culture greenway along the Jing-Zhang Railway Heritage Park connects the Zhongzhiyuan full-stack core, the Beijing AI Origin Community and the Dazhongsi AI Living Room, with the Zhongguancun Technology Services Wing and the Xiaoyue River Scenario Wing forming a collaboration loop. All boundaries are provisional constraints and require recalculation when official polygons are published.

AI Green Nerve Loop · Overall Concept Structure

Source: submitted geometry/*.geojson and metrics.json (recalculated in EPSG:4548); boundaries are provisional constraints, not official redlines.

01 Overall Concept and Spatial Structure

The three scope levels follow the announcement: Coordinated Research Area (c. 43.6 km²), Overall Design Area (c. 11.4 km²) and Key-Area Detailed Design Area (c. 368.4 ha). The spatial structure is 'green chain stringing nodes, station clusters and block stitching', expressed jointly by land-use, road, blue-green and phasing layers.

02 Detailed Design of Key Areas

Zhongzhiyuan AI Independent Innovation Acceleration Area

All three key areas are provisional constraints; recalculate and regenerate all drawings when official polygons are published.

Area	Positioning	Core spatial moves
Zhongzhiyuan	Garden full-stack innovation block	Qinghe frontage + platform + gateway
AI Origin Community	Campus-adjacent conversion and talent community	Incubation belt + release plaza + living loop
Dazhongsi	Urban smart-economy and exchange block	Four quadrants + living room + south gate

03 Mobility and Blue-Green Public Space

Mobility, Slow Network and Blue-Green Composite System

Source: submitted geometry/*.geojson and metrics.json (recalculated in EPSG:4548); boundaries are provisional constraints, not official redlines.

Core metrics recalculation and evidence chain

Metrics recalculated from geometry/*.geojson in EPSG:4548 and match metrics.json; control metrics (FAR etc.) remain unknown pending official regulatory conditions.

Core metrics: Overall Design Area c. 11.413 million m²; green ratio c. 12.5%; public space c. 3.8%; road c. 11.2% (conceptual widths); conceptual building footprint c. 728,000 m²; conceptual total floor area c. 5.765 million m²; 12 scenario cards, 3 testing scenarios, 5 personas, 6 global cases and 3 conceptual landmarks. Control metrics (FAR etc.) are pending official regulatory conditions.

Phasing: Phase 1 key areas and core Green Nerve c. 3.693 million m²; Phase 2 corridors and station stitching c. 4.480 million m²; Phase 3 remaining blocks c. 3.240 million m².

05 AI Scenarios, Operations and Implementation

Twelve scenario cards cover open-source release, governance sandbox, edge-computing stations, slow-mobility navigation, international roadshows, low-carbon corridors, conversion streets, data factors, daily-life services, event routes, governance simulation and education-healthcare experiences; S02, S08 and S11 are industry testing/validation scenarios. The annual calendar runs Open-Source Spring, Scenario Access Summer, Forum Autumn and Developer Carnival Winter; scenario access follows an application-review-sandbox-monitoring-retrospective loop. Ten conceptual projects are sequenced public-first, industry-second, blocks-third across three phases.

Source and status: this booklet is a presentation artifact; authoritative data live in `geometry/*.geojson`, `metrics.json` and the three matrices. Boundaries are provisional constraints, not official redlines; the proposal is a conceptual recommendation, not a government-approved conclusion.
