

Jing-Zhang Timekeeping Belt • Keeping Civic AI On Time

One spine, three stations, eight points, two wings • Time Check Protocol: services expire by default, renewal requires evidence • provisional boundary, conceptual only

Fig.01 Overall concept & structure

Jing-Zhang Timekeeping Belt • Overall Concept

One spine, three stations, eight time-check points, two wings — keeping civic AI on time

FIG-01 OVERVIEW

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.03 Three timekeeping stations

Fig.04 Mobility & blue-green

Three Timekeeping Stations • Key-Area Detailed Design

benchmark → pass → public record: three stations form one non-interchangeable timekeeping chain

FIG-03 KEY AREAS

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Slow-Mobility Network, Blue-Green System & Time-Check Points

One spine, six stitches, two wings • centrelines total 17,691.6 m • principles and data gates only — no traffic sizing claims

FIG-04 MOBILITY

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.02 Land-use partition

Complete Land-Use Partition & Spine Park Band

28 parcels seamlessly cover the provisional site • coverage 1.000000 • recomputed in EPSG:4548

FIG-02 LAND USE

Land-use composition (conceptual recalculation, not statutory) — all values subject to provisional boundary

All geometry uses a provisional rough boundary for concept illustration only — not an official redline or precise-area basis; full recalculation once official polygons arrive. Drawn deterministically from package GeoJSON + metrics.json | Conceptual proposal, not statutory §

Fig.05 Metrics & evidence chain

Core Metrics, Evidence Chain & Time Check Protocol

Narrative, layers, metrics and drawings cross-verify • tabletop drill 6/6, byte-reproducible

FIG-05 EVIDENCE

Time-check tabletop drill (deterministic)

D1 field completeness	4/4
D2 overdue degrade	4/4
D3 out-of-tol. degrade	PASS
D4 on-time renewal	PASS
D5 non-AI path continuity	4/4
D6 five-step retirement	5/5

Drill proves protocol structure & exit branches only; real deployment: not authorized / not run • role unassigned • baseline not built

Ten timetable fields: id • purpose • scope • minimum data • human role • non-AI path • baseline • window ≤180d • degrade plan • delay ledger | Gates T0-T5 | tabletop drill 6/6 (node visual/assets/run_timecheck_tabletop.js --check)

Statutory anchors: Barrier-Free Law Art.39 • GenAI Interim Measures Art.14/15 • Doc.2020-45 (background) | Landmarks: Kilometre Zero • Punctuality Ledger Gallery • Archive of Expired Services

Youhai020616 / jingzhang-timekeeping-belt • Claude Code × Youhai020616 • v1.0 • 2026-08 • provisional boundary illustrative only; full recalculation once official polygons arrive
