

Centennial Jing-Zhang Heritage Corridor

A 9-kilometer main spine along the Jing-Zhang Railway Heritage Park, overlaid with three corridors, three key areas and two wings. It binds centennial Jing-Zhang heritage, the metropolitan AI living experience belt and the AI integration innovation belt to a re-usable spatial structure, operational AI scenarios and a sustainable commemoration system.

[阅读中文版本](#)

Centennial Jing-Zhang Heritage Corridor

A 9-kilometer main spine along the Jing-Zhang Railway Heritage Park, complemented by three corridors, three key areas and two wings. It binds centennial Jing-Zhang heritage, the metropolitan AI living experience belt and the AI integration innovation belt to a re-usable spatial structure, operational AI scenarios and a sustainable commemoration system.

Design Evidence and Source Inventory

This formal package is anchored on the **Prequalification Notice for the Centennial Jing-Zhang AI Innovation Belt Urban Design International Solicitation** issued by the Beijing Municipal Bureau of Planning and Natural Resources, Haidian Branch

[来源](#)

The maintainer-curated agent-facing task book `brief/site-package/agent_taskbook.json` defines the agent tasks

[来源](#)

Reading material, judgments and references come from `brief/site-package/`, `data/source_registry.json`, `data/processed/agent_fact_pack.md`, `brief/site-package/standards/references/` and `docs/terminology-glossary.md`. The provisional boundary is taken from `brief/site-package/geometry/provisional_boundaries.geojson` and is explicitly labelled `provisional_constraint`.

`data/source_registry.json` registers five sources as `usable_for_formal="yes"` (the notice, the agent task book, MOHURD urban design measures, MOHURD control detailed planning regulation, and the MNR land-use classification guide), one source as `provisional_only` (provisional boundaries), and the rest as background or navigation only

[来源](#)

The package never promotes provisional material into official boundary, statutory control or formal scoring evidence; the missing official inputs are listed in `assumptions.json`.

The submission uses `package_type="professional_design_package"`, `package_state="ready_for_review"` and `bilingual_contract_version="1"`. The primary Chinese narrative `proposal.md` and the English counterpart `proposal.en.md` align section by section, claim by claim, metric by metric, evidence by evidence and figure by figure. The v2 reference tokens (`[source:...]`, `[standard:...]`, `[depth:...]`, `[data:...]`, `[metric:...]`) appear at least once in every required section; at most three tokens are chained per sentence, and every sentence remains readable after tokens are removed.

Three-Level Scope Framework

The package operates at the three scope levels defined by the notice:

- **CRA — Coordinated Research Area (43.6 km²)**: AI innovation ecosystem, strategic positioning, future city form.
- **ODA — Overall Design Area (11.4 km²)**: urban renewal around the Jing-Zhang Railway Heritage Park, 1-2 km city and industry belt, transport and municipal support, city character and the Jing-Zhang Heritage Park vitality belt.
- **KDA — Key Detailed-design Area (368.4 ha)**: Zhongzhiyuan, Beijing AI Origin Community and Dazhongsi, three required detailed-design areas.

Each level is mapped to proposal sections, GeoJSON layers, metrics, drawings, HTML pages and self-check entries inside `compliance_matrix.json`.

The package is named **Centennial Jing-Zhang Heritage Corridor / 百年京张文化走廊** with the tagline **From the first Chinese-built railway to the first AI-native neighborhood**. The logo concept layers a 1 435 mm railway gauge and neural-network nodes to combine the railway heritage and the AI ecosystem; final vector design is reserved to the maintainer [assumption:A-BRAND-006].

The spatial concept is **Three Corridors, Three Areas, Two Wings** (3-3-2). Three corridors — Jing-Zhang Main Spine Slow-Mobility Innovation Corridor, AI Scenario Lab Corridor and Intelligent Consumption Experience Corridor — stitch the three key areas together. Two wings — Zhongguancun Technology Services Wing and Xiaoyue River Scenario Enablement Wing — extend the innovation and operation reach. Spatial nodes are tracked in `spatial.json` and corroborated by `land_use.geojson` and `roads.geojson`

[空间数据](#)

[空间数据](#)

[深度](#)

Level	Question	Answer	Evidence anchor
CRA	Innovation ecosystem and future city form	Five-stage chain: university origination → open-source collaboration → enterprise translation → public experience → international broadcasting	spatial.json / compliance_matrix.json
ODA	Renewal, land use, transport, character	4 land-use polygons + 5 public-space polygons + 4 green-space polygons + 5 corridors	空间数据 ... 空间数据
KDA	Three key detailed designs	Each area has a position, spatial moves, AI scenarios and implementation dependencies	空间数据 ... 空间数据

Because official `SITE_BOUNDARY` and the three `KEY_AREA` polygons are not yet published, the package uses provisional geometry. After the official polygon release, the package must recompute `site_boundary.geojson`, `key_areas.geojson`, `land_use.geojson`, `roads.geojson`, `green_space.geojson`, `public_space.geojson`, `buildings.geojson`, `phasing.geojson` and `metrics.json`. The current compliance state is "provisional intake: readable, queryable, reproducible, replaceable".

Coordinated Research Area — Innovation Ecosystem and Future City Form

The CRA focuses on building a world-class AI innovation ecosystem. We trace the innovation chain through Beijing-Haidian universities, leading enterprises, incubators, unicorns and open-source communities, and organise it as **university origination → open-source collaboration → enterprise translation → public experience → international broadcasting**

[来源](#)

[标准](#)

Each stage maps to a spatial anchor:

- University origination — Zhongzhiyuan (PROV-KEY-001)
- Open-source collaboration — Beijing AI Origin Community (PROV-KEY-002)
- Enterprise translation — Dazhongsi (PROV-KEY-003)
- Public experience — Jing-Zhang main spine
- International broadcasting — AI pilgrimage landmark candidates (PUBLIC-002 / PUBLIC-003 / PUBLIC-001)

The brand identity uses the maintainer's recommended terminology

[来源](#)

the visual identity is a 1 435 mm railway gauge overlaid with neural-network nodes. Logos, fonts and partner marks at the participant sketch stage do not constitute final brand decisions [assumption:A-BRAND-006].

Eight comparable cases inform the package: Station F (open-source incubator + public living room), Block 71 / One-North (university-to-capital pipeline), Kendall Square (basic research + application), Kista (ICT cluster + talent), Yokohama MM21 (public living room + international exhibition), Zhongguancun Science City (enterprise + university + public), Haidian AI Origin (Tsinghua, PKU, Beihang, BUPT close-to-school collaboration), and the Greater Bay Area digital economy (data elements + international cooperation). Each case provides one transferable mechanism

[来源](#)

Future city form is operationalised as two superimposed experience paths: the **AI Living Experience Belt** along the main spine (continuous open space and everyday services between communities, campuses and stations) and the **AI Integration Innovation Belt** along the corridors (compute, data, models, enterprises and developer communities).

Overall Design Area — Renewal at Regulatory-Detailed-Planning Depth

The ODA package reaches control-detailed-planning depth. Four land-use polygons fully cover the provisional boundary (LU-001 AI R&D 23.43%, LU-002 Park Green 22.69%, LU-003 Industrial/Commercial Service 29.49%, LU-004 Community Service 24.38%); adjacent polygons share their boundary coordinates

[空间数据](#)

[深度](#)

Building footprint of 1 738 678.815 m² is recomputed from `buildings.geojson`; green and public-space ratios are recomputed from `green_space.geojson` and `public_space.geojson` (green_ratio = 0.3036, public_space_ratio = 0.054008)

[指标](#)

[指标](#)

The renewal project list JZ-01 to JZ-06 maps one-to-one to the three phases in `phasing.geojson`:

- JZ-01 Jing-Zhang Main Spine slow-mobility gap stitching
- JZ-02 Zhongzhiyuan Qinghe Innovation Edge
- JZ-03 AI Origin near-school translation street
- JZ-04 Dazhongsi four-quadrant pedestrian continuity
- JZ-05 AI public-service + edge-compute node
- JZ-06 Global AI Activity Week public route

[空间数据](#)

[深度](#)

Regulatory-depth conclusions are explicitly classified as **known control / design suggestion / pending confirmation**. `floor_area_ratio` and `building_height_max_m` are marked `status: unknown` with recompute prerequisites. Road redlines, ownership, municipal capacity, fire safety and heritage boundaries all remain in `assumptions.json` [assumption:A-CONTROLS-001]

[标准](#)

Three Key Areas Detailed Design

The three key areas follow the notice order and the provisional polygons.

- **Zhongzhiyuan AI Independent Innovation Acceleration Area (PROV-KEY-001, approx. 192.1 ha)** — a garden-style independent innovation block. Focus: national AI platform, full-stack autonomy, standards and governance, low-carbon innovation. Spatial moves: Qinghe riverside interface, low-carbon corridor, national AI platform cluster

[空间数据](#)

[深度](#)

- **Beijing AI Origin Community (PROV-KEY-002, approx. 104.3 ha)** — a campus-adjacent translation and talent community. Focus: campus / park / block stitching, open-source hall, talent services, lifestyle. BLDG-001 / BLDG-002 / PUBLIC-002 / PUBLIC-003 anchor the open-source living room and developer community

[空间数据](#)

- **Dazhongsi AI Industry Cluster (PROV-KEY-003, approx. 72.0 ha)** — an urban intelligent economy and international exchange block. Focus: leading enterprises, agents, smart terminals, data-element salon, four-quadrant pedestrian continuity around Dazhongsi Station [assumption:A-RAIL-TRANSIT-004]. BLDG-003 international roadshow living room, BLDG-005 smart-terminal experience pavilion, PUBLIC-004 four-quadrant living room and ROAD-005 pedestrian ring form the Dazhongsi core skeleton

[空间数据](#)

重点区域 · 三处详细设计片区

Three key areas index

Key Area	Position	Spatial move	AI scenarios and operations
Zhongzhiyuan (north)	Full-stack independent innovation garden block	Qinghe riverside + low-carbon corridor + national AI platform cluster	National platform showcase, standards sandbox, low-carbon compute
AI Origin Community (mid)	Campus-adjacent open-source + talent community	Campus stitch, open-source hall, developer living room	Open-source release hall, AI governance plaza, translation street
Dazhongsi (south)	Intelligent economy + international exchange block	Four-quadrant pedestrian ring around Dazhongsi Station, smart-terminal experience pavilion	International roadshow living room, data-element salon, robot delivery

Each area has a parallel narrative in [proposal.en.md](#) and an isolated switch card in [visual/index.html](#).

Innovation Ecosystem, Personas and AI+ Scenarios

Personas (5)

Persona	Need	Spatial response	Privacy / review
Open-source developer	Publish, collaborate, test, community reputation	Open-source hall, AI Governance Plaza, night co-working node	Aggregate statistics only; no personal trajectory
Early-stage team	Low-cost office, compute entry, product test	Zhongzhiyuan shared test ground, edge-compute kiosk	Compute and data need explicit consent
Leading enterprise visitor	Showcase, business, international reception, talent recruitment	Dazhongsi international roadshow living room, station integration	Enterprise marks and cases need cleared rights
Local resident	Commute, leisure, community service, low-disturbance renewal	Jing-Zhang main spine slow mobility, community service, night grading	No commercial recommendation on residents
Faculty and student	Translation, cross-campus collaboration, daily slow mobility	Campus / park stitch, AI education experience node	Campus data and academic imagery need clearance

Scenario Cards (≥10, including 3 AI Industry Test/Validation Scenarios)

#	Scenario Card	Spatial Anchor	Key Operation
01	Open-source release hall	AI Origin BLDG-002 / PUBLIC-002	Faculty, open-source community, early-stage release 空间数据
02	AI governance sandbox (TVS)	Zhongzhiyuan + AI Origin	Standards setting, trustworthy evaluation, model red-team; ethics review required [assumption:A-AI-TESTING-005]
03	AI slow-mobility diagnosis	Main spine ROAD-001 / public_space.geojson	Explainable public data identifies slow-mobility gaps; no personal trajectory 空间数据
04	Edge-compute kiosk (TVS)	Service nodes along the belt	Edge inference + low-carbon energy; small-scale pilot before expansion 空间数据
05	Dazhongsi international roadshow living room	Dazhongsi BLDG-003 / PUBLIC-004	Agents / smart-terminals / content consumption showcase 空间数据
06	Qinghe low-carbon innovation corridor	Zhongzhiyuan Qinghe edge GREEN-004	Stormwater, walking, AI showcase 空间数据
07	Near-school translation street	AI Origin	Incubator / showcase / legal / IP / investment
08	Data-element salon (TVS)	Dazhongsi	Open datasets, compliant licensing, audit; pilot operator only [assumption:A-AI-TESTING-005]
09	AI lifestyle prototype street	Community / commercial cross-street	AI + healthcare, education, legal, lifestyle at small block scale
10	Global AI Activity Week route	Belt-wide public-space system	Annual "JZ-AI Week" combining developer festival, scenario open-day, roadshows 深度

AI Pilgrimage Landmark Candidates (≥3)

- **AI Governance Plaza (PUBLIC-002)** — mid-AI Origin, showcases standards setting, trustworthy evaluation and safety governance.
- **Open-source Contribution Wall (PUBLIC-003)** — records agent and developer contributions, paired with JZ-AI Week.
- **Agent Contribution Pillars (PUBLIC-001)** — the Tsingyuan end node of the main spine, a "century-origin → AI-endpoint" memorial structure.

Land Use, Building Scale and Retain / Renovate / Demolish

Land use follows MNR land-use classification (codes 0802 / 1401 / 05 / 0702)

[标准](#)

Four land-use polygons cover the provisional boundary without gaps or overlaps. Building footprint of 1 738 678.815 m² is recomputed from six sample footprints; it is a concept illustration, not a parcel-level retain / renovate / demolish conclusion

[空间数据](#)

[深度](#)

The Jing-Zhang Railway blue-line and the Tsingyuan Station buffer are explicitly expressed in [constraints.geojson](#) (CONST-001 / CONST-002); any renovation must follow the cultural-relics authority review [assumption:A-HERITAGE-003]

[空间数据](#)

Retain / renovate / demolish conclusions remain concept suggestions pending official regulatory plan, ownership, heritage and engineering input.

Transport, Rail, Municipal and Public-Service Facilities

Five corridors (ROAD-001 main spine slow-mobility, ROAD-002 scenario lab, ROAD-003 intelligent consumption, ROAD-004 east-west blue-green stitch, ROAD-005 Dazhongsi four-quadrant ring) cover three areas and two wings

[空间数据](#)

[空间数据](#)

Key nodes include Dazhongsi four-quadrant (CONST-003) and North Fifth Ring under-bridge (CONST-004). Municipal and new-infrastructure strategy is captured by scenario cards 03, 04, 08 as concept suggestions; concrete energy, compute, flood-control and fire-safety indices remain [unknown](#) pending official input [assumption:A-AI-TESTING-005]

[深度](#)

Blue-Green Space, Public Space and City Character

Blue-green space is expressed by four `green_space.geojson` polygons (GREEN-001 main spine continuous belt, GREEN-002 Qinghe-Xiaoyue River interface, GREEN-003 Dazhongsi entrance pocket, GREEN-004 Zhongzhiyuan Qinghe low-carbon corridor). Public space is expressed by five `public_space.geojson` polygons (PUBLIC-001 central activity interface, PUBLIC-002 AI Governance Plaza, PUBLIC-003 open-source contribution wall, PUBLIC-004 Dazhongsi four-quadrant living room, PUBLIC-005 Zhongzhiyuan low-carbon innovation living room)

空间数据

深度

City character integrates Jing-Zhang railway heritage, Zhongguancun innovation culture and AI new culture. Wayfinding and logo concepts use the gauge-and-network symbol; all fonts, imagery, portraits and partner marks at the participant sketch stage do not constitute final brand decisions [assumption:A-BRAND-006]. Building height and massing remain `building_height_max_m`: unknown and require official regulatory-plan attachment

指标

Renewal Project List, Implementation Policy and Phasing

JZ-01 to JZ-06 are recorded in the proposal and the renewal-projects module of `visual/index.html`. The three `phasing.geojson` polygons cover the near-term (AI Origin main spine 2026-2027), mid-term (Dazhongsi international roadshow living room 2027-2028) and long-term (Zhongzhiyuan national AI platform cluster 2028-2030)

空间数据

深度

The annual event system is designed as **JZ-AI Week**: developer festival, scenario open-day, contest roadshow, urban experience route and public art festival. Developer community operation is anchored on an open-source collaboration committee + annual contribution wall + monthly public evaluation. International dissemination links the Zhongguancun Forum, the Haidian Science Week and overseas partner channels [assumption:A-PROVISIONAL-AREA-007].

Project	Phase	Lead (suggested)	Main dependency
JZ-01 Jing-Zhang main spine slow-mobility stitching	Near	Haidian District + sub-district	Road redline, under-bridge space, traffic organisation
JZ-02 Zhongzhiyuan Qinghe innovation edge	Long	Haidian + park platform	River blue-line, ecology, flood control
JZ-03 AI Origin near-school translation street	Near	Haidian + universities + Zhongguancun	Campus boundaries, ownership, ground-floor mix
JZ-04 Dazhongsi four-quadrant pedestrian ring	Mid	Haidian + Beijing Metro	Station integration, municipal pipes
JZ-05 AI public-service + edge-compute node	Mid	Haidian + platform company	Energy, compute, secure operation
JZ-06 Global AI Activity Week public route	Near	Zhongguancun + Haidian	Public-space permit, event safety, copyright

Metrics, Area Recompute and Compliance Matrix

The metrics system is partitioned into three groups. The first group — directly recomputed from geometry — includes `site_area_sqm = 11 412 825.386`, `green_ratio = 0.3036`, `public_space_ratio = 0.054008`, `land_use_total_area_sqm`, and the four `land_use_0xxx_ratio` entries (23.43% / 22.69% / 29.49% / 24.38%). The second group — requiring official regulatory-plan attachments — includes `floor_area_ratio` and `building_height_max_m` (both `status`: unknown with reasons). The third group — operational or industry KPIs — includes `scenario_card_count = 10`, `scenario_test_validation_count = 3`, `user_persona_count = 5`, `ai_pilgrimage_landmark_count = 3` and `key_area_count = 3`.

`compliance_matrix.json` covers 22 requirements (1.3 / 1.4 / 1.5 and agent.1-agent.6). `standard_matrix.json` covers five mandatory standards (PROJECT-OFFICIAL-ANNOUNCEMENT, PROJECT-AGENT-OPEN-CALL-TASKBOOK, MOHURD-URBAN-DESIGN-MEASURES, MOHURD-CONTROL-DETAILED-PLANNING, MNR-LAND-USE-CLASSIFICATION-GUIDE). `design_depth_matrix.json` covers 14 core depth items, all `status`: complete

Risk, Copyright and Compliance

Bilingual contract. The primary narrative is Chinese; the English counterpart `proposal.en.md` mirrors its section by section, claim by claim, metric by metric, evidence by evidence and figure by figure. HTML, A3/A0 and text-bearing figures use a `.zh / .en` naming convention. Terminology follows `docs/terminology-glossary.md`. The package declares `bilingual_contract_version="1"` and `proposal_format_version="2"`; sentences remain readable after v2 tokens are removed.

All spatial recommendations are written as **concept suggestion / reference scheme / open for professional elaboration**, never as formal planning or government approval. Known control (provisional boundary and notice text four-bounds), design suggestion (land use, scenarios, public space) and pending confirmation (official polygon, FAR, height, regulatory plan, heritage, ownership, municipal, fire) are separated into `metrics.json`, `assumptions.json` and `compliance_matrix.json`

深度

The risk matrix `risk.json` covers eight 1-5 items (data gap, privacy, heritage, implementation, policy, technology maturity, equity, branding). Copyright and font registration are recorded in `report/copyright_statement.md`. HTML and PDF are fully offline: no CDN, no remote tiles, no external scripts, no external fonts, no iframes, no forms, no API calls and no tracking.
