

01 Jing-Zhang Intelligence Spine

Three scopes

Research 43.6 km²
Overall design 11.4 km²
Key areas 368.4 ha

Three key areas

AI Origin Community
Zhongzhi Park
Dazhongsi AI Cluster

History to future

Centennial railway memory →
public AI learning and innovation belt

Reading note

All boundaries are provisional intake geometry; recalculate after official data.

02 City Ear / City Response

Public question input

Optional language interaction at seats, lamps, sorting points and service interfaces.

Energy to inference

Exercise micro-generation → storage → public language interaction; disclose loss and time-window assumptions.

Human review

Facts, privacy, bias and safety are discussed by people; output is not a planning decision.

Voluntary board

Nickname, anonymous or opt-out; no health data and no service gate.

03 Transformer Park

01 Token Square

A city question is split into model-readable tokens.

02–03 Position + Attention

Position Garden and Attention Corridor make relations observable.

04 Multi-head Deck

Safety, accessibility, lighting, activity and environment are parallel lenses.

05–06 Review + Generate

Human Review Desk → Next-token Theatre; every output remains a draft.

04 Blue-Green Walk and Public AI

Continuous route

Transformer Park loop connects public space, walking and learning.

Accessibility first

Entrances, ramps, rest, information and interaction require continuous access.

Node system

City Ear, token display, human review desk and output lounge.

Evidence note

Roads, green space and nodes are conceptual; engineering and heritage review required.

04 Delivery and Evidence

Evidence chain

Public question → spatial node → energy/token explanation
→ human review → open experiment agenda

Model metrics

Site 11.41 km²
Green ratio 12.3423%
Public space 7.3281%

Phasing

Start with reversible learning nodes, then test equipment after review.

Professional boundary

Privacy, accessibility, electrical, cyber, heritage and planning review required.
