

Overall design area | provisional geometry

Not an official redline, recalculate after official polygons arrive

NO LOGIN REQUIRED

Jing-Zhang's Unconditional Public Ground

Design where the city has no right to ask who you are first.

SPATIAL FORMULA
One no-login ground + four identity layers
+ three Gate Zeros + two accountable back offices

- 1 Zhongzhiyuan observation ring 2 AI Origin knowledge court
3 Dazhongsi four-quadrant public ground (directional concept)

Land use | credential-boundary map

Not just land-use colors: identity thresholds

- Knowledge and education collaboration
- Responsible AI research
- Unconditional public ground
- Everyday community services
- Industry translation and commerce

Threshold section

ordinary route stays continuous
FAR, height, setbacks, road redlines and retain/renovate/demolish decisions remain pending official controls, rights, survey and engineering evidence.

THREE GATE ZEROS + TWELVE EVERYDAY SCENARIOS

continuous ordinary routes, visible controlled services, exitable sessions

THREE GATE ZEROS | public baseline before smart service

Zhongzhiyuan | no-login observation ring

Continuous public observation ring; robot trials never sever the ordinary route. Controlled R&D sits behind a visible red boundary.

AI Origin | public knowledge court

Paper, human and on-device translation support a public knowledge court. Results remain legible without an account.

Dazhongsi | four-quadrant public ground (directional)

Crossing, wayfinding and public information remain no-login. Transactions and regulated services use separate authenticated doors.

All three rectangles are organizer-supplied provisional placeholders, not station-anchored parcels or road boundaries; Dazhongsi is directional only.

Mobility + blue-green public ground

Ordinary-route continuity is the first performance metric

01 PASS WITHOUT A DEVICE

Walking, crossing, resting, wayfinding, public information and help never require login.

02 WHITE BYPASS BESIDE EVERY RED ZONE

Authenticated R&D, payment and regulated services never sever commutes, accessible routes or the heritage walk.

03 AI AUGMENTS THE ECOLOGICAL BASELINE

Rain, heat and biodiversity observations stay publicly legible; no separate screen landscape.

04 EVERY SESSION HAS AN EXIT

On-device translation and anonymous help expire without a durable personal profile.

Bridges, tunnels, the underground high-speed railway, Line 13, road redlines and utilities require specialist verification.

CORE METRICS + EVIDENCE CHAIN

Reproducible concept metrics — not statutory controls

11.413 km²

provisional site area

17.0%

concept green ratio

4.2%

node public-space ratio

12

no-login scenario nodes

REVIEW BOUNDARIES

- Exact official SITE_BOUNDARY / KEY_AREA polygons are not public.
- PROV-KEY-003 has a documented station-anchoring issue and must not be moved independently.
- FAR, height, density, setbacks, rights, existing buildings and engineering constraints remain unknown.
- Official inputs trigger full recalculation of all nine GeoJSON layers, metrics, figures and schedules.

Areas are recalculated from submitted geometry in EPSG:4548; 11.413 km² is a reproducible provisional value only.

01 Tactile + paper bilingual wayfinding

03 Human-backed AI help point

05 Public model-status board

07 Profile-free local discovery

09 No-face event entry

11 On-device temporary translation

02 No-login railway heritage walk

04 Account-free public knowledge court

06 Anonymous health navigation

08 White-route robot-test bypass

10 Physical-token civic feedback

12 Profile-free terminal trial
