

# NO LOGIN REQUIRED

Jing-Zhang's Unconditional Public Ground

Overall design area | provisional geometry  
Not an official redline, recalculate after official polygons arrive

# NO LOGIN REQUIRED

## Jing-Zhang's Unconditional Public Ground

Design where the city has no right to ask who you are first.

WHITE | anonymous public layer

GREEN | human, paper, on-device help

YELLOW | expiring one-time session

RED | lawfully authenticated service

SPATIAL FORMULA  
One no-login ground + four identity layers  
+ three Gate Zeros + two accountable back offices

1 Zhongzhiyuan observation ring   2 AI Origin knowledge court  
3 Dazhongsi four-quadrant public ground (directional concept)

Beside every smart entrance, keep an equally dignified, continuous and accessible ordinary route.

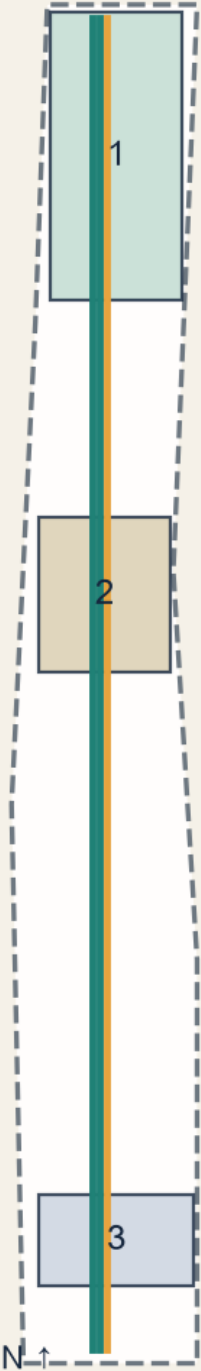

WHITE: anonymous public layer  
GREEN: human, paper and on-device help  
YELLOW: expiring one-time session  
RED: lawfully authenticated service

# 01 EVIDENCE + SCOPE

A reproducible starting point, not an official redline

Overall design area | provisional geometry

Not an official redline, recalculate after official polygons arrive

NO LOGIN REQUIRED

Jing-Zhang's Unconditional Public Ground

Design where the city has no right to ask who you are first.

WHITE | anonymous public layer

GREEN | human, paper, on-device help

YELLOW | expiring one-time session

RED | lawfully authenticated service

SPATIAL FORMULA

One no-login ground + four identity layers

+ three Gate Zeros + two accountable back offices

1 Zhongzhiyuan observation ring

2 AI Origin knowledge court

3 Dazhongsi four-quadrant public ground (directional concept)

THREE SCALES

43.6 km<sup>2</sup> coordinated research

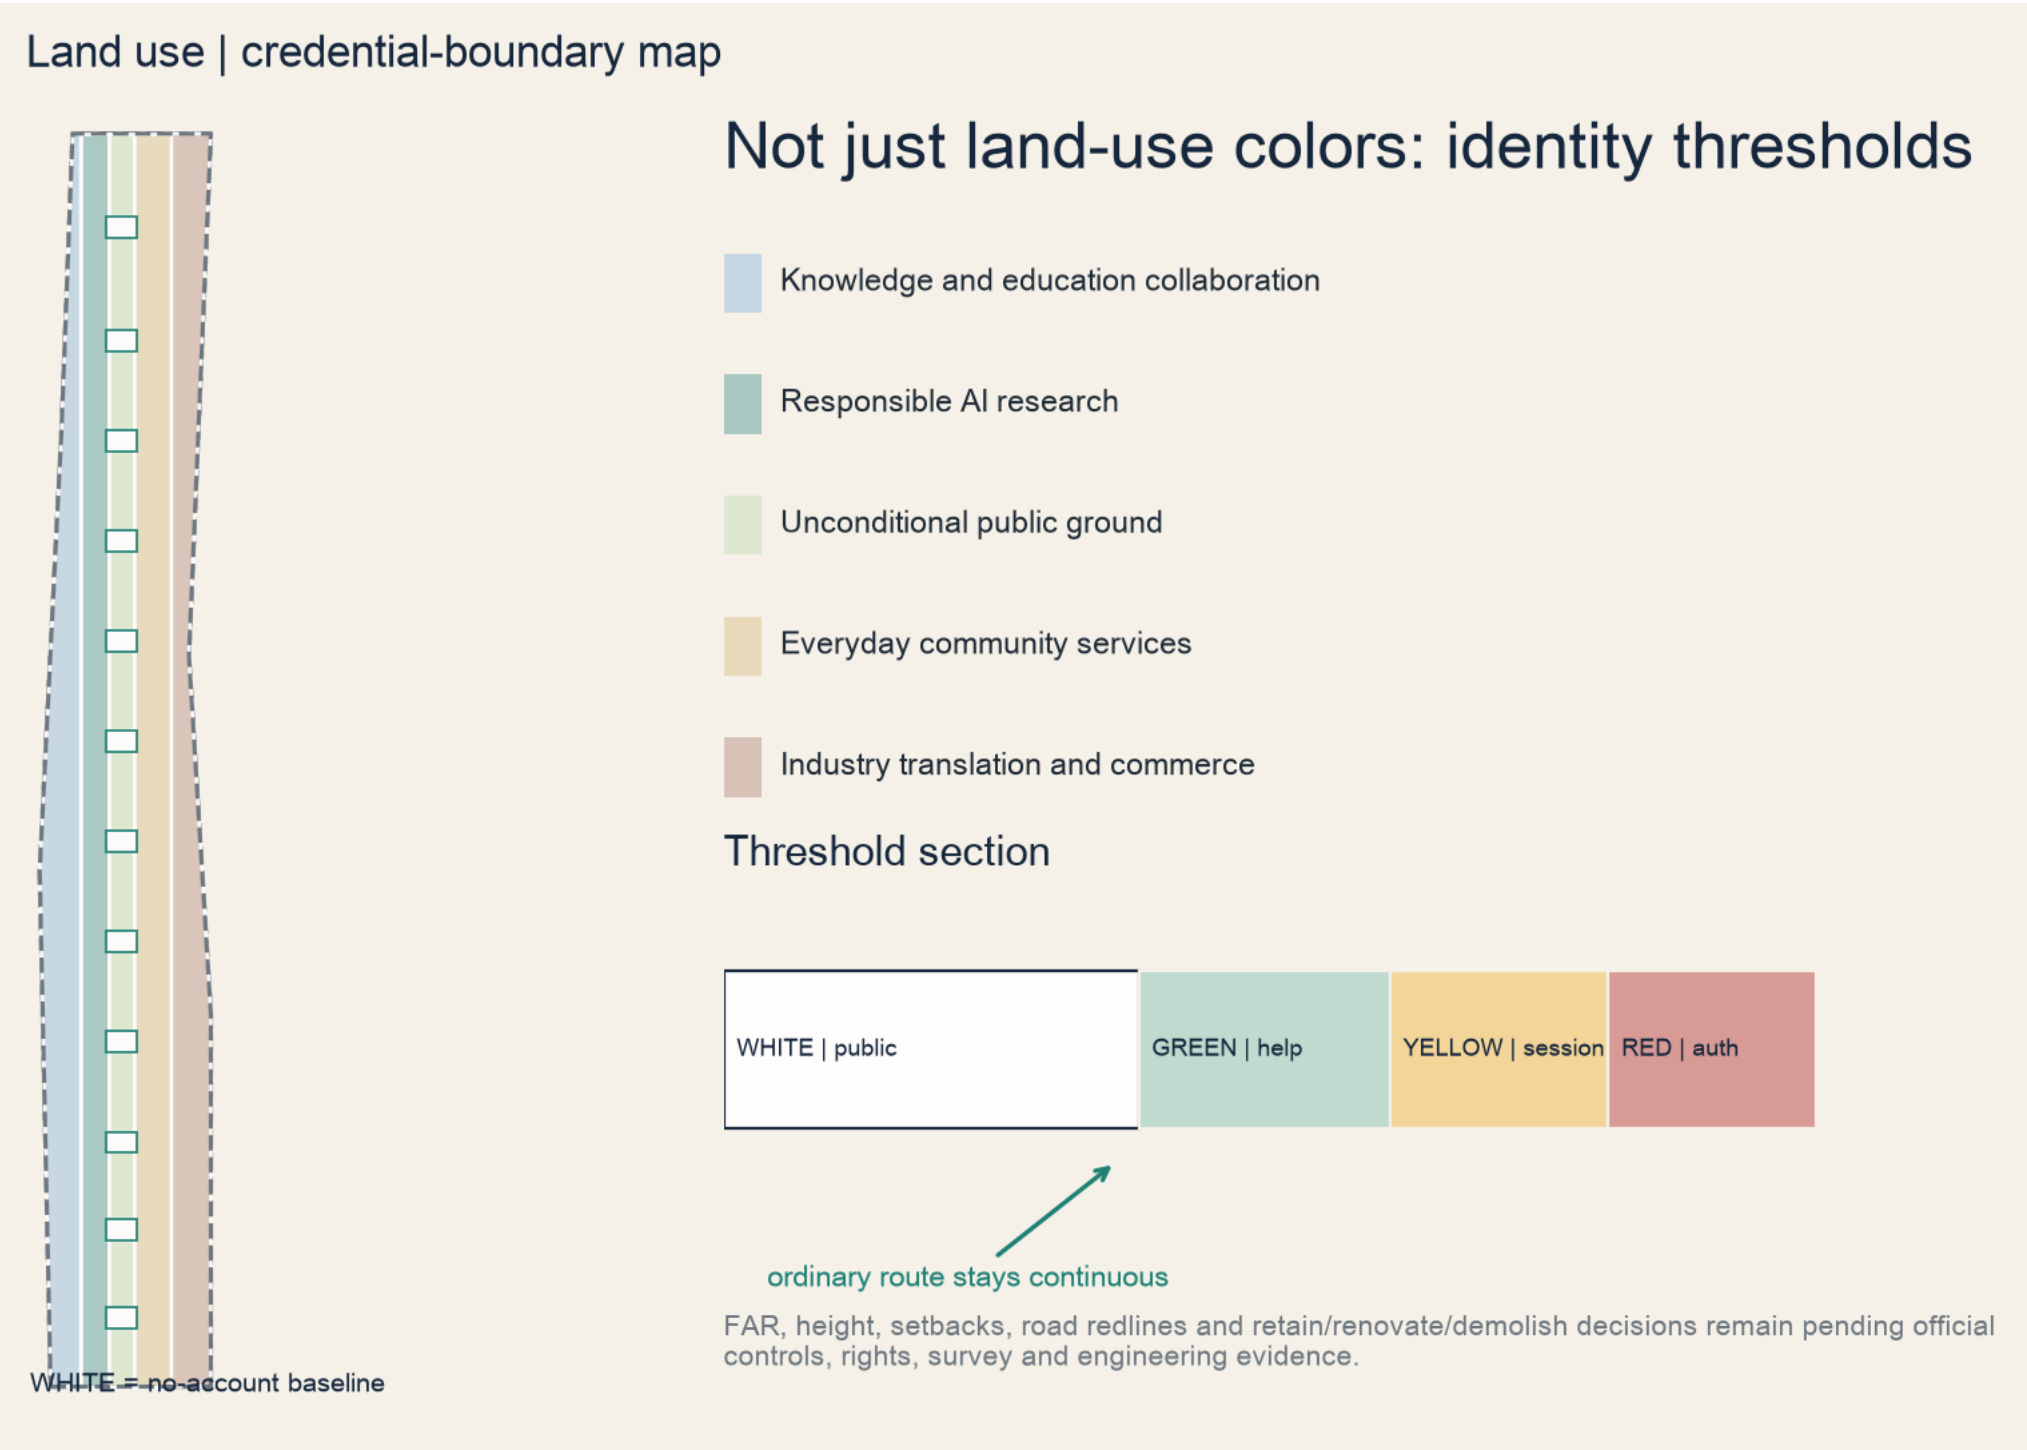

11.4 km<sup>2</sup> overall design

368.4 ha key-area design

Exact official polygons are unavailable. PROV-KEY-003 need s review and must not be moved independently.

# 02 IDENTITY INFRASTRUCTURE

One no-login ground + four identity layers

Identity thresholds create no new land rights. They show where public ground, optional help, temporary sessions and authenticated services become visible, bypassable and exitable. FAR, height, setbacks and demolition await professional work.

# 03 THREE GATE ZEROS

The ordinary public baseline comes first

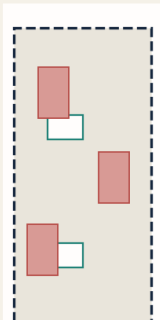

ZHONGZHIYUAN: no-login observation ring outside controlled labs.

AI ORIGIN: public knowledge court beyond the account.

DAZHONGSI: account-free four-quadrant public ground; directional concept.

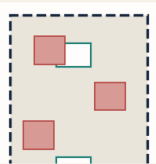

## THREE GATE ZEROS | public baseline before smart service

Zhongzhiyuan | no-login observation ring

Continuous public observation ring; robot trials never sever the ordinary route. Controlled R&D sits behind a visible red boundary.

AI Origin | public knowledge court

Paper, human and on-device translation support a public knowledge court. Results remain legible without an account.

Dazhongsi | four-quadrant public ground (directional)

Crossing, wayfinding and public information remain no-login. Transactions and regulated services use separate authenticated doors.

All three rectangles are organizer-supplied provisional placeholders, not station-anchored parcels or road boundaries; Dazhongsi is directional only.

# 04 TWELVE EVERYDAY SCENARIOS

Any passer-by can understand, choose and leave

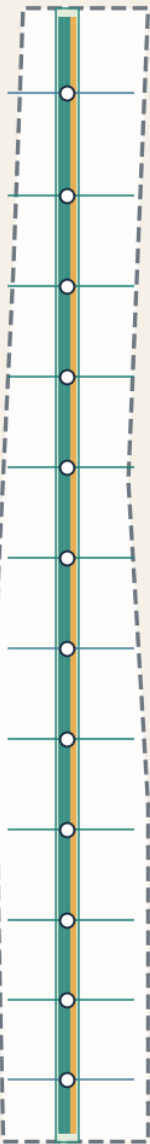

|                                                               |                                                          |                                                      |

# 05 MOBILITY + BLUE-GREEN

Ordinary-route continuity is the first performance metric

A white walking baseline, continuous cycle line and heritage o  
bservation route run longitudinally; twelve cross-links connect  
campuses, parks and communities. Bridges, underground rail  
and utilities require specialist checks.

Mobility + blue-green public ground

## Ordinary-route continuity is the first performance metric

**01 PASS WITHOUT A DEVICE**  
Walking, crossing, resting, wayfinding, public information  
and help never require login.

**02 WHITE BYPASS BESIDE EVERY RED ZONE**  
Authenticated R&D, payment and regulated services never  
sever commutes, accessible routes or the heritage walk.

**03 AI AUGMENTS THE ECOLOGICAL BASELINE**  
Rain, heat and biodiversity observations stay publicly  
legible; no separate screen landscape.

**04 EVERY SESSION HAS AN EXIT**  
On-device translation and anonymous help expire without a  
durable personal profile.

Bridges, tunnels, the underground high-speed railway, Line 13, road redlines and utilities require specialist verification.

# 06 METRICS + PHASING

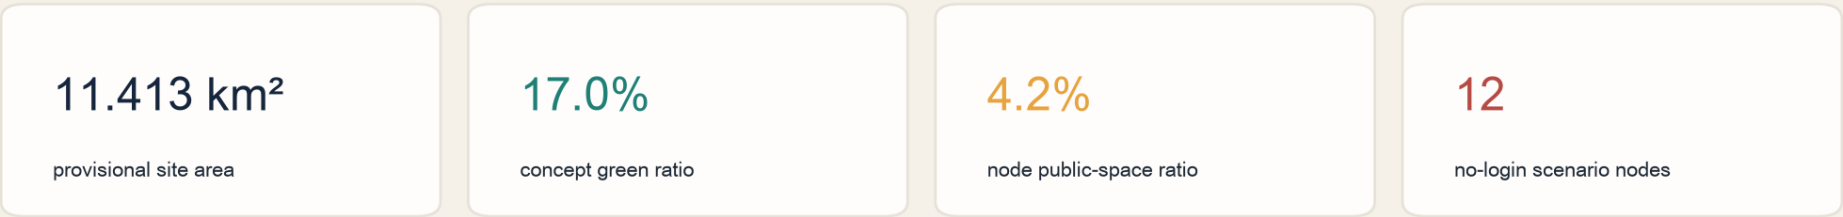

Concept metrics recalculate; statutory controls stay unknown

Provisional site area: 11.413 km²  
Concept green ratio: 17.0%  
Public-node ratio: 4.2%

Near term builds the no-login baseline; mid term trials scenarios and accountable back offices; long term extends after official boundary and engineering checks.

## CORE METRICS + EVIDENCE CHAIN

Reproducible concept metrics — not statutory controls

### REVIEW BOUNDARIES

- Exact official SITE\_BOUNDARY / KEY\_AREA polygons are not public.
- PROV-KEY-003 has a documented station-anchoring issue and must not be moved independently.
- FAR, height, density, setbacks, rights, existing buildings and engineering constraints remain unknown.
- Official inputs trigger full recalculation of all nine GeoJSON layers, metrics, figures and schedules.

Areas are recalculated from submitted geometry in EPSG:4548; 11.413 km² is a reproducible provisional value only.

# 07 RISK + PROMISE BOUNDARIES

Pilots do not predetermine statutory plans; official data trigger full recalculation

- The no-login promise covers public ground, basic wayfinding, basic participation and human alternatives only.
- R&D access, payment, medical, legal and other regulated services may authenticate, but require clear marking and an ordinary bypass.
- No facial recognition, cross-context durable identifiers or default personal profiling.
- When boundary, rights, buildings, heritage, rail, utilities or engineering evidence is missing, no deterministic control or investment claim is made.
- All graphics, text and code are original; cases provide mechanisms only, with no copied images or peer assets.
