

JING-ZHANG NO OVERLOAD

A city that still serves everyone
at peaks, failures and offline
moments.

01 / URBAN PROTOCOL

ONE LOAD SPINE · THREE OVERFLOW COURTYARDS

An urban protocol that keeps public service available under stress

- 01 NORMAL
- 02 AMBER
- 03 HANDOVER
- 04 RECOVER

AI recommends; people decide. Critical service keeps staffed and offline access.

NORMAL → AMBER →
HANDOVER → RECOVER

Geometry is provisional.
Statutory controls, exact
boundaries, utilities, peak
capacity and recovery
targets require official
data and field tests.

02 / CAPACITY LAND USE

LAND USE AS A CAPACITY SYSTEM

Concept functions + Load Spine + three switchable public spaces

4 × CAPACITY ROLES

- Shared innovation
- Civic service
- Open space
- Support functions

Colours show conceptual roles, not statutory rezoning.

Conceptual functions;
not statutory rezoning.

Geometry is provisional.
Statutory controls, exact
boundaries, utilities, peak
capacity and recovery
targets require official
data and field tests.

03 / THREE KEY AREAS

THREE AREAS · THREE VALIDATION JOBS

One capacity protocol, distinct spatial roles

01

ZHONGZHIYUAN | STRESS-TEST YARD

Test before deployment: model, robot and edge failover

02

AI ORIGIN | MANUAL RELAY COMMONS

Digital, staffed and offline paths coexist

03

DAZHONGSI | PEAK SWITCH HALL

Visible queues, robot holding, event overflow

NORMAL → AMBER → HANDOVER → RECOVER

JING-ZHANG NO OVERLOAD · CONCEPTUAL / PROVISIONAL GEOMETRY

Stress test · Human relay · Peak switch

Geometry is provisional. Statutory controls, exact boundaries, utilities, peak capacity and recovery targets require official data and field tests.

04 / REDUNDANT NETWORK

REDUNDANT MOVEMENT & BLUE-GREEN OVERFLOW

One north-south spine, six east-west relays, twelve service nodes

- 1 Load Spine
- 6 Relay Paths
- 3 Overflow Courtyards
- 12 Service Scenes

Routes express redundancy, not approved road redlines.

1 spine · 6 relays · 3
courtyards · 12 scenes

Geometry is provisional.
Statutory controls, exact
boundaries, utilities, peak
capacity and recovery
targets require official
data and field tests.

05 / AI OPERATING MODEL

ONE LOAD SPINE · THREE OVERFLOW COURTYARDS

An urban protocol that keeps public service available under stress

- 01 NORMAL
- 02 AMBER
- 03 HANDOVER
- 04 RECOVER

AI recommends; people decide. Critical service keeps staffed and offline access.

AI recommends; people decide.

Geometry is provisional. Statutory controls, exact boundaries, utilities, peak capacity and recovery targets require official data and field tests.

06 / EVIDENCE & NEXT DATA

ONLY CLAIM WHAT CAN BE RECALCULATED

Spatial facts, proposal commitments and operational unknowns

11.41

km² provisional site

3

overflow courtyards

6

relay portals

12

service scenes

KNOWN ≠ APPROVED

- GeoJSON → EPSG:4548 → metrics.json
- Source → assumption → claim
- Proposal → drawing → offline visual
- Validator → self_check.json

PENDING: statutory FAR, height, peak capacity, recovery time

Known does not mean approved.

Geometry is provisional. Statutory controls, exact boundaries, utilities, peak capacity and recovery targets require official data and field tests.
