

SUBSTRATE master plan

Six bands, vias, three macros

Dashed outline is a provisional constraint, not an official redline. Conceptual suggestion only.

Land use and renewal

Eighteen cells; FAR pending official data

Rewrite microcode, keep the die

Eighteen cells cover the provisional boundary: park/plaza in the center, living west, program east.

Retain / renovate / demolish

Keep the open park surface. Renovate via rooms. Remove only trial components. New mass must not cut the substrate.

Dashed outline is a provisional constraint, not an official redline. Conceptual suggestion only.

Three key areas

Compute / host / southbridge

Zhongzhiyuan

Compute core: trials east, public rooms at vias, daily life west. One token, one section.

Origin

Host interface: account-free daily track. Human window first, AI switch behind, exit receipt always on.

Dazhongsi

Southbridge: closable stalls, not an always-on mall. Freight stays on the fast clock.

- Compute
- Host
- Southbridge

Dual clocks and blue-green space

Slow clock stays account-free; fast clock exchanges only at vias

Slow clock

Walk, cycle, stay. Uses the park spine and via links. No account. The path remains after the model stops.

Fast clock

Rail, bus and delivery stay on the east concept line. No new at-grade expressway through living fabric.

Vias

Clocks exchange only at vias. A via is a staffed public room for asking, exiting, and returning a token.
