

One Axis · Three Hubs · Four Epochs · Multiple Nodes

Using the 9 km Jing-Zhang Railway Heritage Park spine as a timeline from Railway 1909 → Zhongguancun 1980s → Internet 2000s → AI 2026+, the plan organizes three key areas (Dazhongsì, Zhongzhiyuan, Beijing AI Origin Community) and ~12 flexible open-source nodes. Provisional boundary shown; not an official redline; recompute once official data arrives.

Key area	Area	Positioning	Epoch	Core moves
	72 ha	Smart economy & intl. exchange	AI 2026+	TOD integration, 4-quadrant links, vertical mix
	192.1 ha	Full-stack innovation garden	Internet→AI	Qinghe low-carbon park, computing hub, safety lab
	104.3 ha	Near-campus conversion & talent	ZGC→Internet	Campus-park-community, knowledge plaza, open source

AI-native Urban Form and 4+1 New Infrastructure

- Building-algorithm fusion: facades integrate sensors, displays and responsive devices.
- Public space as test ground: autonomous driving, delivery robots and monitoring run in real environments, with notice and opt-out.
- Data-driven iteration: crowd, energy and activity data form an operate-sense-adjust loop.
- Low-carbon infrastructure: distributed energy, edge computing and smart grids integrated with buildings.

Layer	Infrastructure	Layout	AI scenario link
	Sensors, edge computing	Nodes every 500 m	Real-time environment data
	Edge AI stations	Ground floor of facilities	On-device AI inference
	Low-latency 5G, LoRa	Full coverage, enhanced cores	Autonomous driving / interaction
	Solar road, microgrid, wireless charging & public space	Green energy & public space	Green energy supply
	CityOS digital twin	Cloud platform	Dispatch/monitor/warn/scenario mgmt
