Concept: Three Feats of Individual Wisdom

1909 railway · 1980 registry · 2019→AI super-individuals — translated into a three-station belt for one-person companies

1909

prototype of PROVING

1980

prototype of the ORIGIN

2019

prototype of the DEAL

The Jing-Zhang Railway

The first trunk railway surveyed, designed and built by a Chinese team — one chief engineer, one Chinese crew, zero foreign dependency. Zhan himself credited 10,000+ workers: not one man's feat.

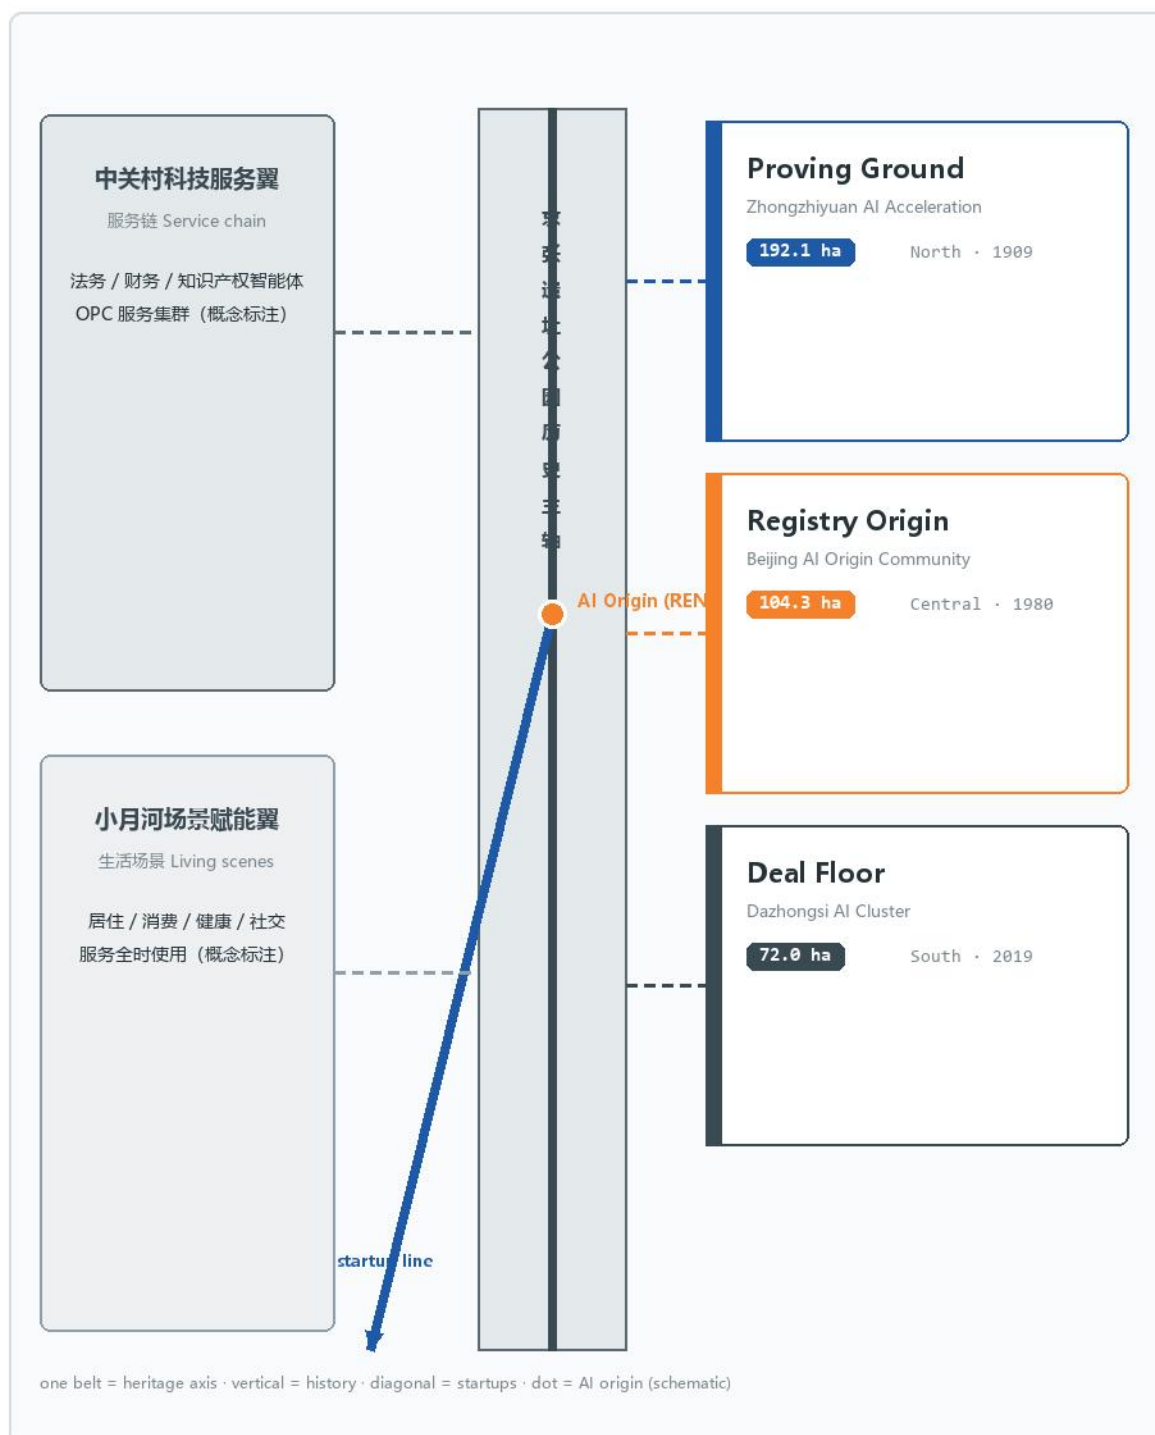

Chen Chunxian's service dept.

Chen Chunxian founded Zhongguancun's first private sci-tech institute with a ¥500 cheque — no state quota, no investment. Great things from the smallest possible organisation.

Jing-Zhang HSR · the AI age

World's first 350 km/h smart high-speed railway: Beijing–Zhangjiakou in 47 minutes, high-frequency meetings become routine; AI turns 'one person + a staff of agents' into a company.

The REN mark · one belt, three stations, two wings

One belt, three stations, two wings, one blue-green loop

- One belt: the Ruins Park heritage axis doubles as the OPC 'common room', stitching the ~9.7 km belt.
- Three stations: Registry Origin 104.3 · Proving Ground 192.1 · Deal Floor 72.0 (ha) = 368.4 ha key areas.
- Two wings: the Zhongguancun service wing carries the OPC service chain; the Xiaoyue wing, living scenes.
- One loop: blue-green slow traffic plus a low-speed robot logistics corridor (dashed = to be developed).
- REN mark: vertical = heritage axis, diagonal = startup line, dot = AI Origin; the 'REN' (person) of the switchback is the person of the OPC.

Note: station role reinterpretations, landmarks and event systems are concept proposals for professional teams — not government decisions or implementation commitments.

Key Areas: The Three Stations

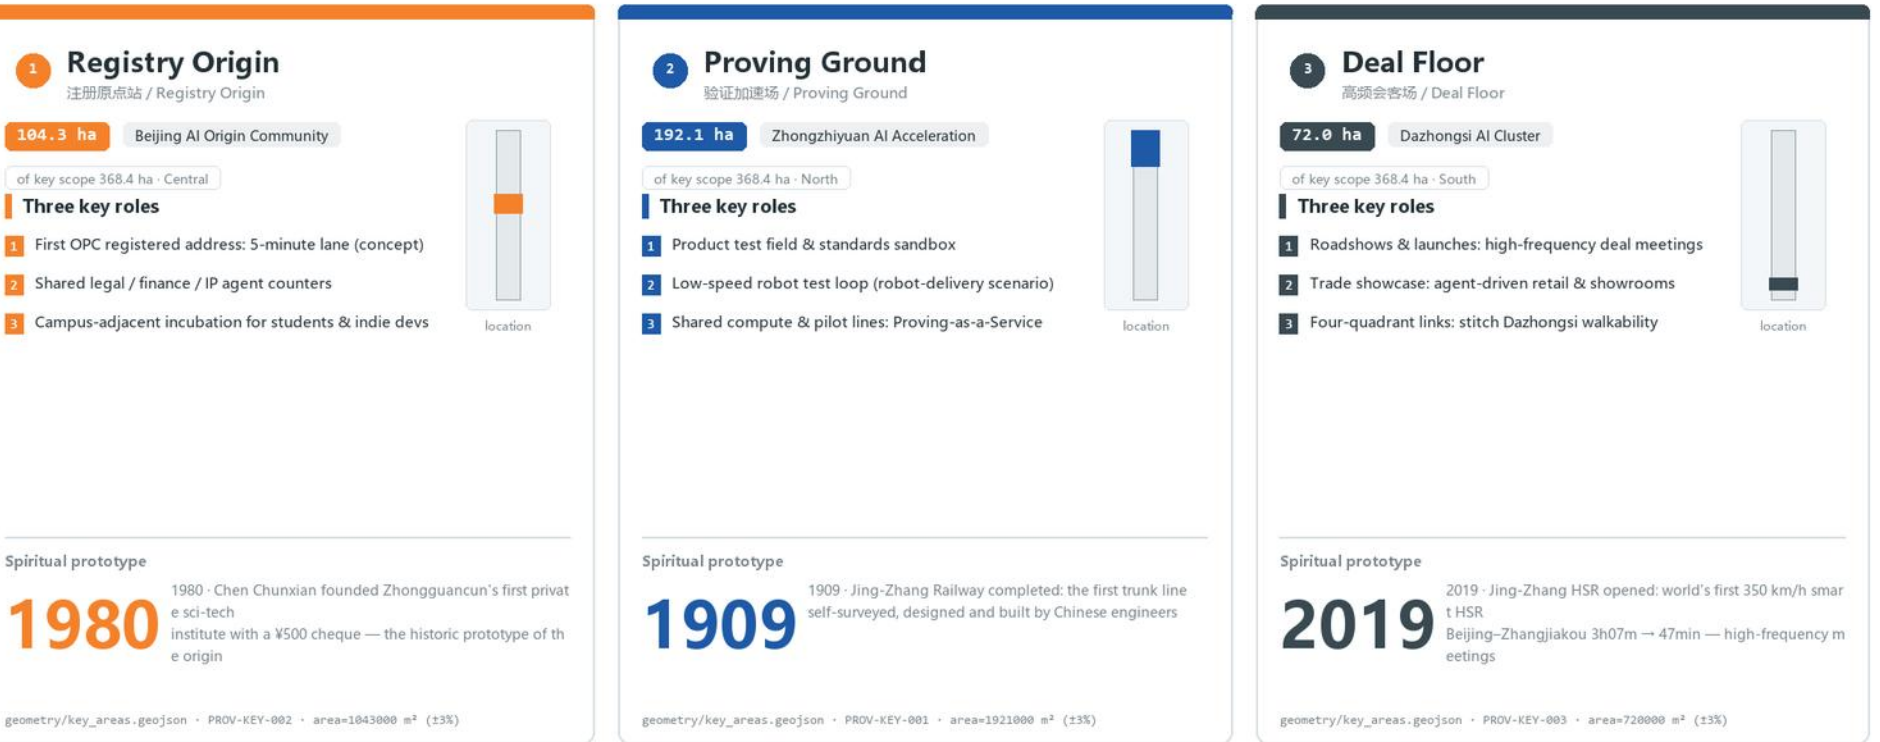

Key scope 368.4 ha = Registry Origin 104.3 + Proving Ground 192.1 + Deal Floor 72.0 (ha) · prototypes 1980 / 1909 / 2019

Five OPC space types along the life cycle: register → work → prove → launch → compute

P.04

Jing-Zhang One-Person Company Belt

1909 · 1980 · 2019 — a railway for one-person companies

Scenario System: A Day of an OPC Founder

Twelve scenario cards (SC-01...12, matching opc_node anchors in the public_space layer) · carrier, users and privacy boundary on every card

SC-0107:30

First registered address

carrier Origin · registry kiosk

privacy

Statutory business disclosure only; home addresses never public

SC-0209:00

Agent-staff standup

carrier Origin · work pods

privacy

On-device processing; pod data never mirrored to public screens

SC-0310:30

Proving loop test

carrier Zhongzhiyuan · test loop

privacy

Roadside imagery anonymized, aggregate stats only

SC-0412:00

Agent coffee

carrier Ruins Park · common room

privacy

Orders not retained, never used for ad targeting

SC-0514:00

Dazhongsi roadshow

carrier Dazhongsi · launch hall

privacy

Content shared per licence; closed sessions never recorded

SC-0616:00

Compute depot

carrier Logistics-loop nodes

privacy

Workloads encrypted in scheduling; separate data licence

SC-0718:00

Xiaoyue life wing

carrier Xiaoyue riverside

privacy

Health data on-device; no resident profiling for ads

SC-0821:00

Night work pods

carrier Around the three stations

privacy

Named booking, anonymous usage; minimal sensing

SC-09Next day

No.1 Registry wall

carrier Origin · nameplate wall

privacy

Opt-in numbering and aliases only

SC-10Weekend

REN Deck overlook

carrier Ruins Park

privacy

No facial recognition on the deck

SC-11Anytime

Code Wall

carrier Dazhongsi

privacy

Only already-open commits shown

SC-12Periodic

REN Developers' Conference

carrier Three-station circuit

privacy

Registration for logistics only; data de-identified after

REN Developers' Conference

Scenario anchors: geometry/public_space.geojson (opc_node=true, 12 nodes) · agent services follow data-minimisation, explainability and human review

Schematic, not an engineering drawing · provisional boundary (intake display; official boundary prevails)

Jing-Zhang OPC Belt · A3 Booklet · 4 / 6

Core values verbatim from metrics.json (no rounding) · known/unknown discipline · three-way sync geometry ↔ metrics.json ↔ visual (1ppm check)

Provisional boundary — read first

- site_boundary.geojson and key_areas.geojson are tagged provisional_constraint, official_boundary=false (provisional intake boundaries).
- For generation, self-check, visualization and design discussion only — never as official redline, approval basis, precise-area basis or statutory control.
- The gap does not block content scoring; replacing official polygons requires recalculation of boundary, key areas, land use, roads, green/public space, buildings, phasing and metrics.

Case sourcing statement

- Levels / Tony Dinh / Carrd / HeadshotPro / Aaron Sneed / EVE figures are founder-reported or self-disclosed (unaudited) — feasibility references only, never investment or planning evidence.
- Altman's 'one-person billion-dollar company' is a prediction (recorded 2023, published 2024) — not fact.
- No prospective tenant is named, no 'XX will move in'; no claim of approval, statutory plan, final property rights, final GFA or guaranteed delivery.

Unknown discipline & recalculation rules

floor_area_ratio = unknown

No approved FAR controls in the public package; the value stays null.

Controls deferred

Height, density, setbacks and red lines await the statutory plan; wording kept as 'pending confirmation'.

Recalculation rules

Areas within $\pm 1\%$; ratios in [0,1]; green/public ratios use their own layers as numerators.

Wording red lines (all 12 checked)

1. Never 'Zhan built it alone' — one chief engineer + a Chinese team + zero foreign dependency; keep his humble credit.
2. Never claim Zhan invented the switchback — 'creatively applied to the terrain'.
3. Altman's one-person unicorn is a prediction, never stated as fact.
4. Cost-saving figures keep their calibre (7.29M-tael budget; 200K+ saved; a 280K reading exists).
5. 'Centennial Jing-Zhang' as brand wording; avoid precise anniversary claims.
6. Zhan's quote is from a 1918 speech — never merged into the 1905–1909 timeline.
7. Chen Chunxian: 'first private sci-tech institute', never 'first private enterprise'.
8. Revenues flagged 'founder-reported, unaudited'; unverified cases unused.
9. Keep the PRC-law one-person LLC apart from OPC as an operating model.
10. Keep the '350 km/h' qualifier with every HSR superlative.
11. Scenarios and landmarks are concept proposals, not government decisions.
12. Honor systems (star wall, REN conference) are mechanism designs pending data access.
