

Why Jing-Zhang: The Openline 100

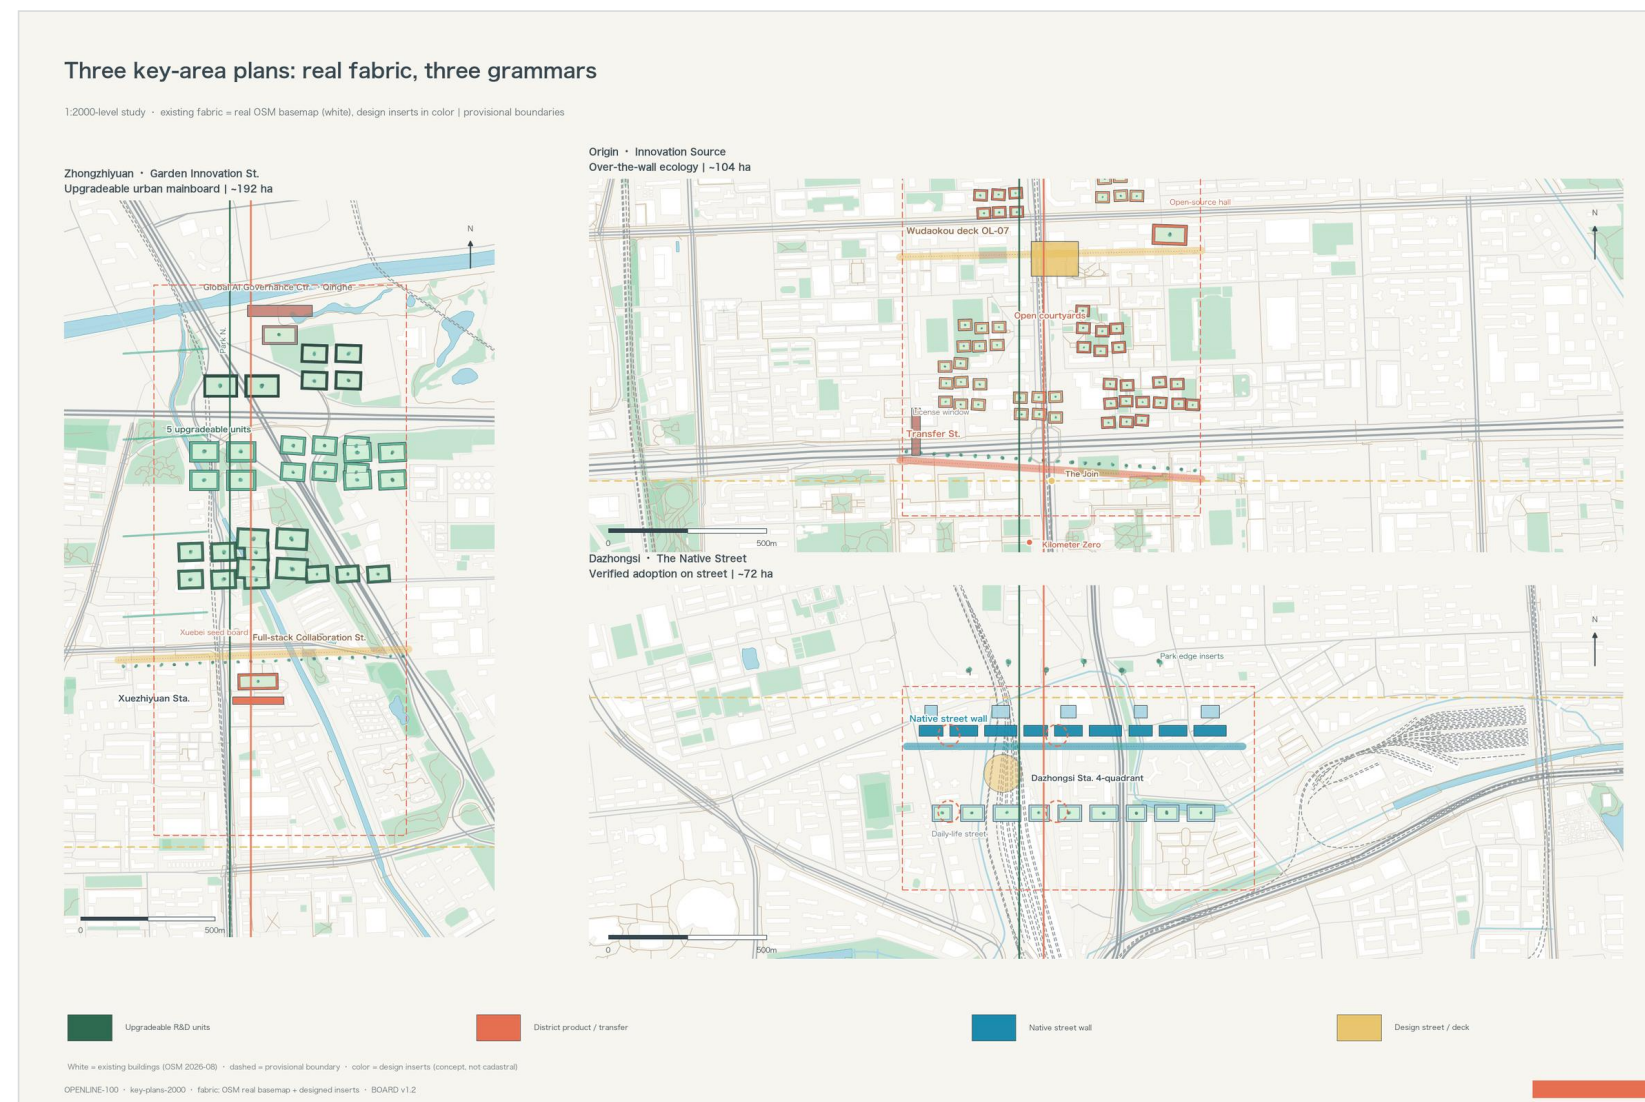

Urban design proposal for the Haidian Jingzhang heritage corridor • A3 plate book

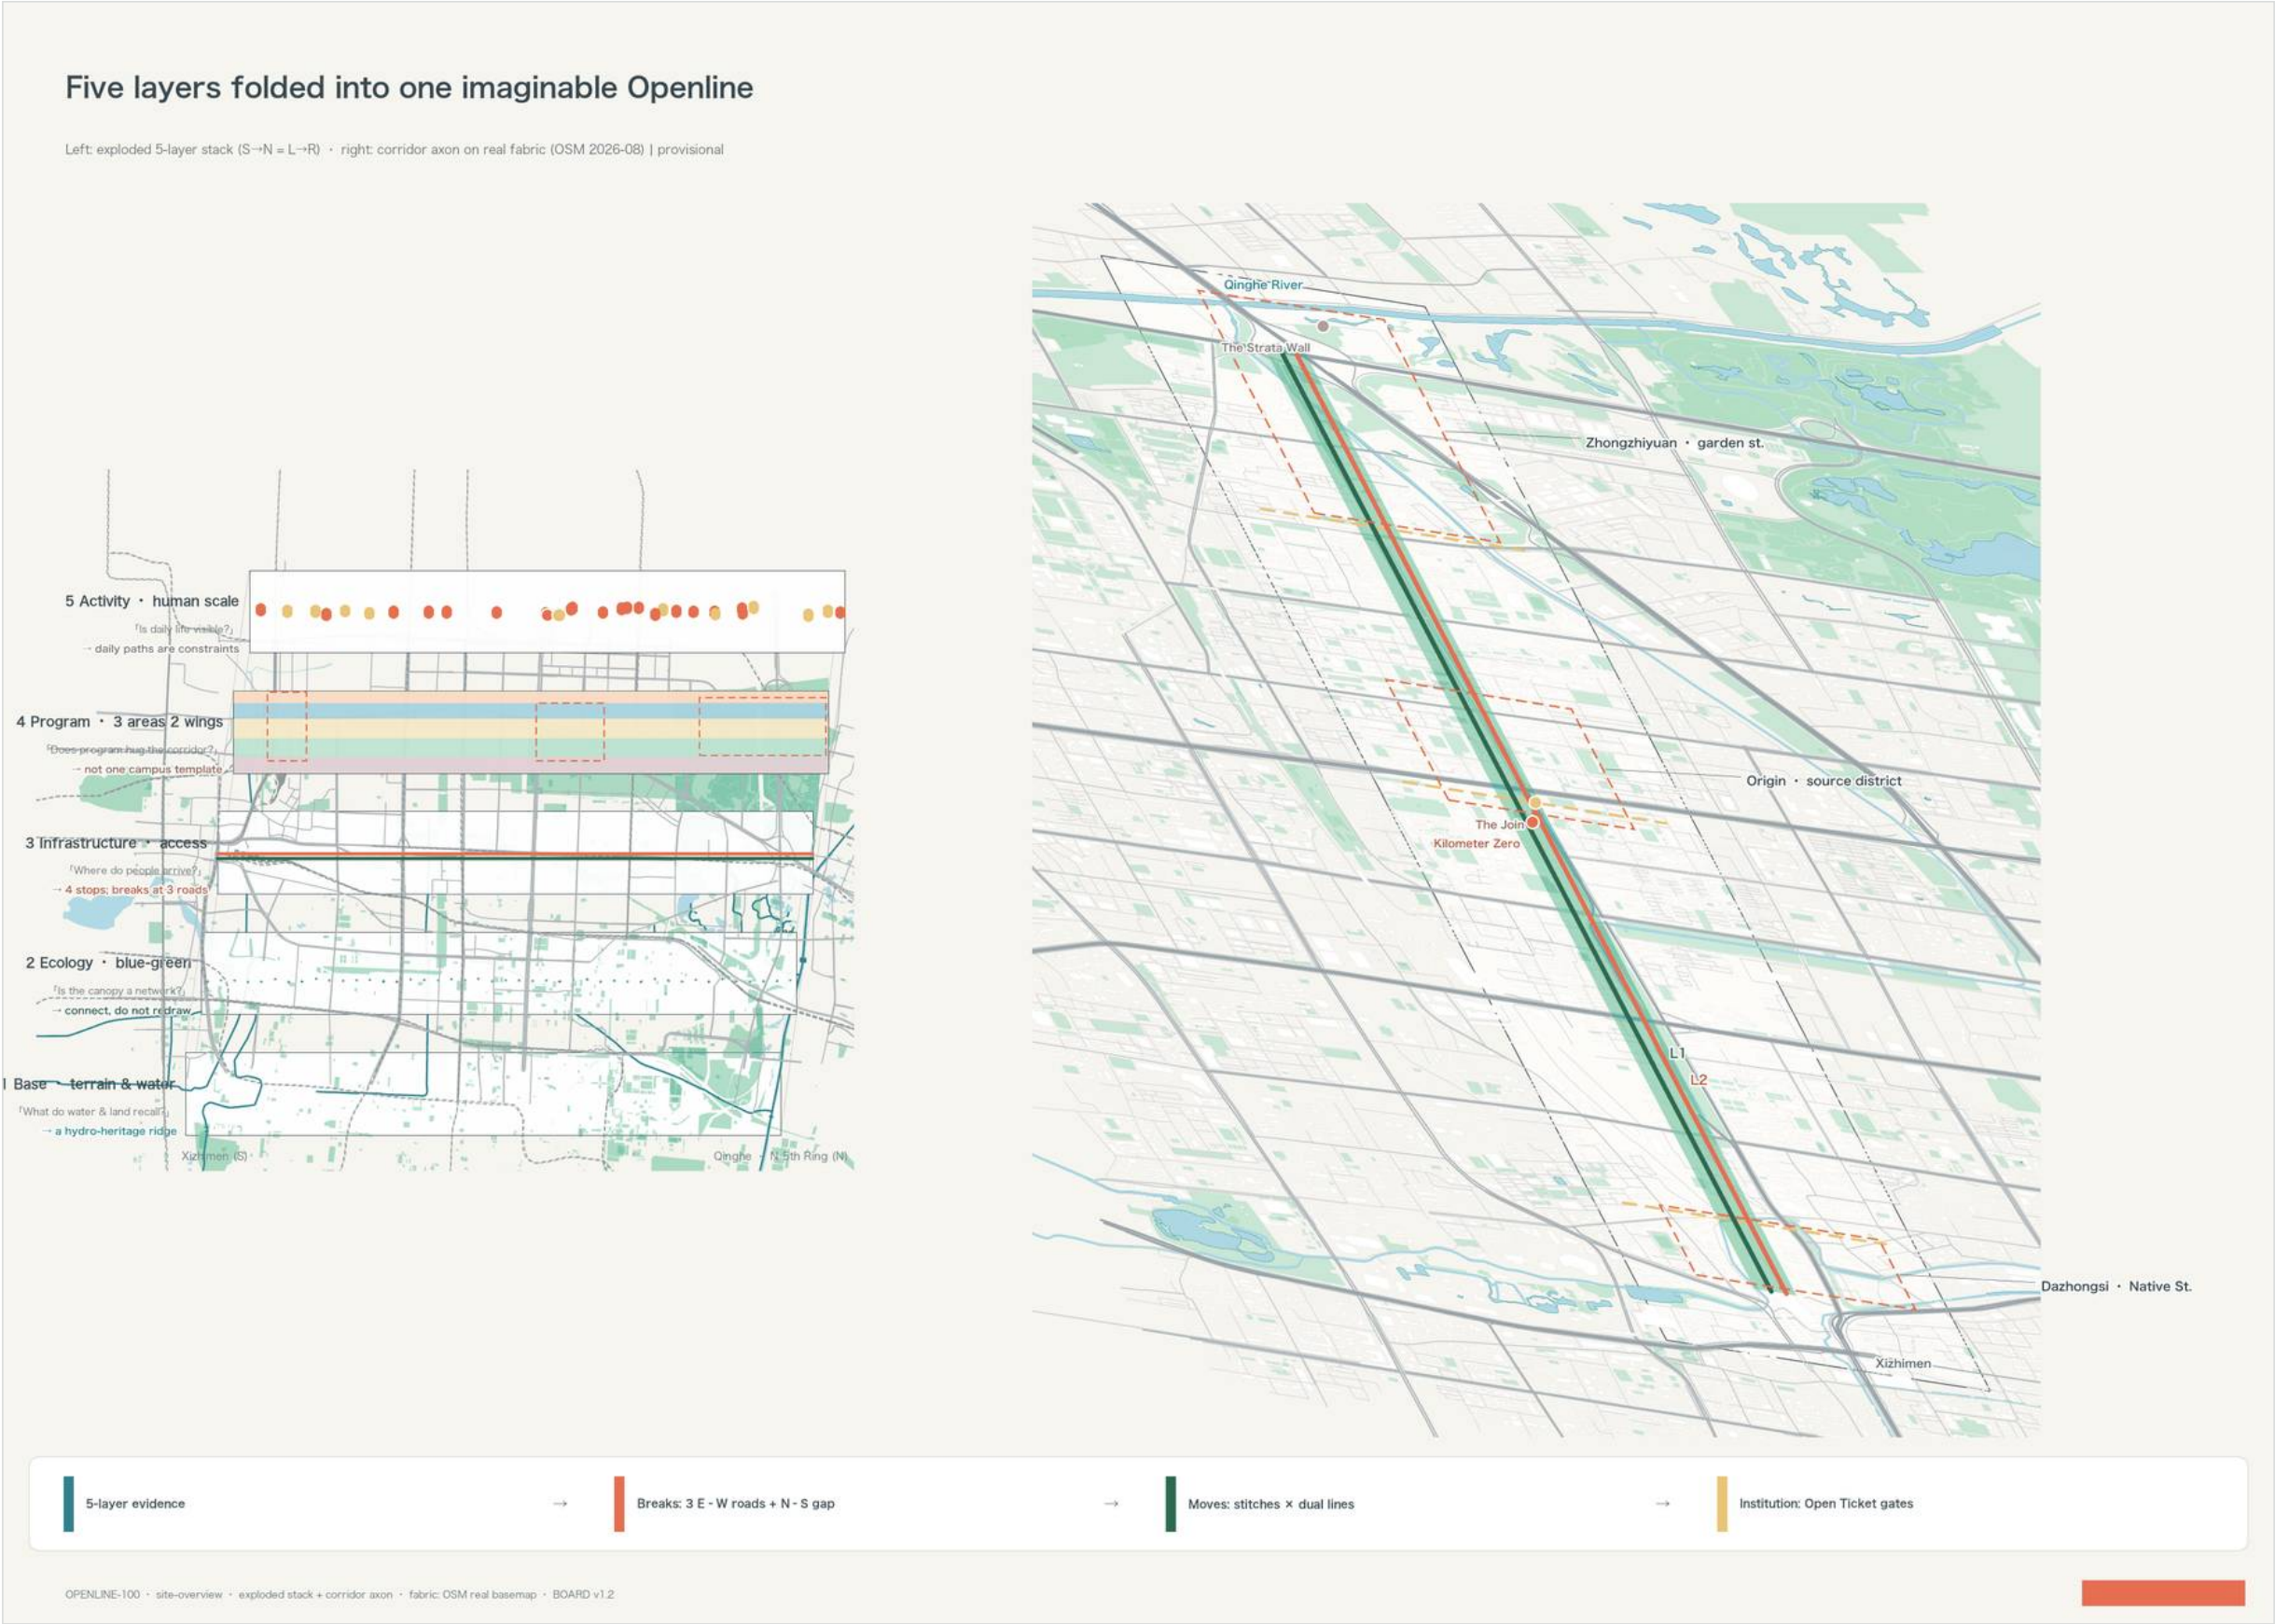

This book collects 24 plates, all re-rendered on real OSM urban fabric and proposal geometry.

The full narrative lives in [proposal.md](#) / [proposal.en.md](#) and [report/proposal.html](#).

Graphic standard: Sasaki v1.2 (palette / type scale / scale bars / north arrows / title blocks).

Openline 100 Studio • kenshin-ai-101 • 2026-08 • v1.2

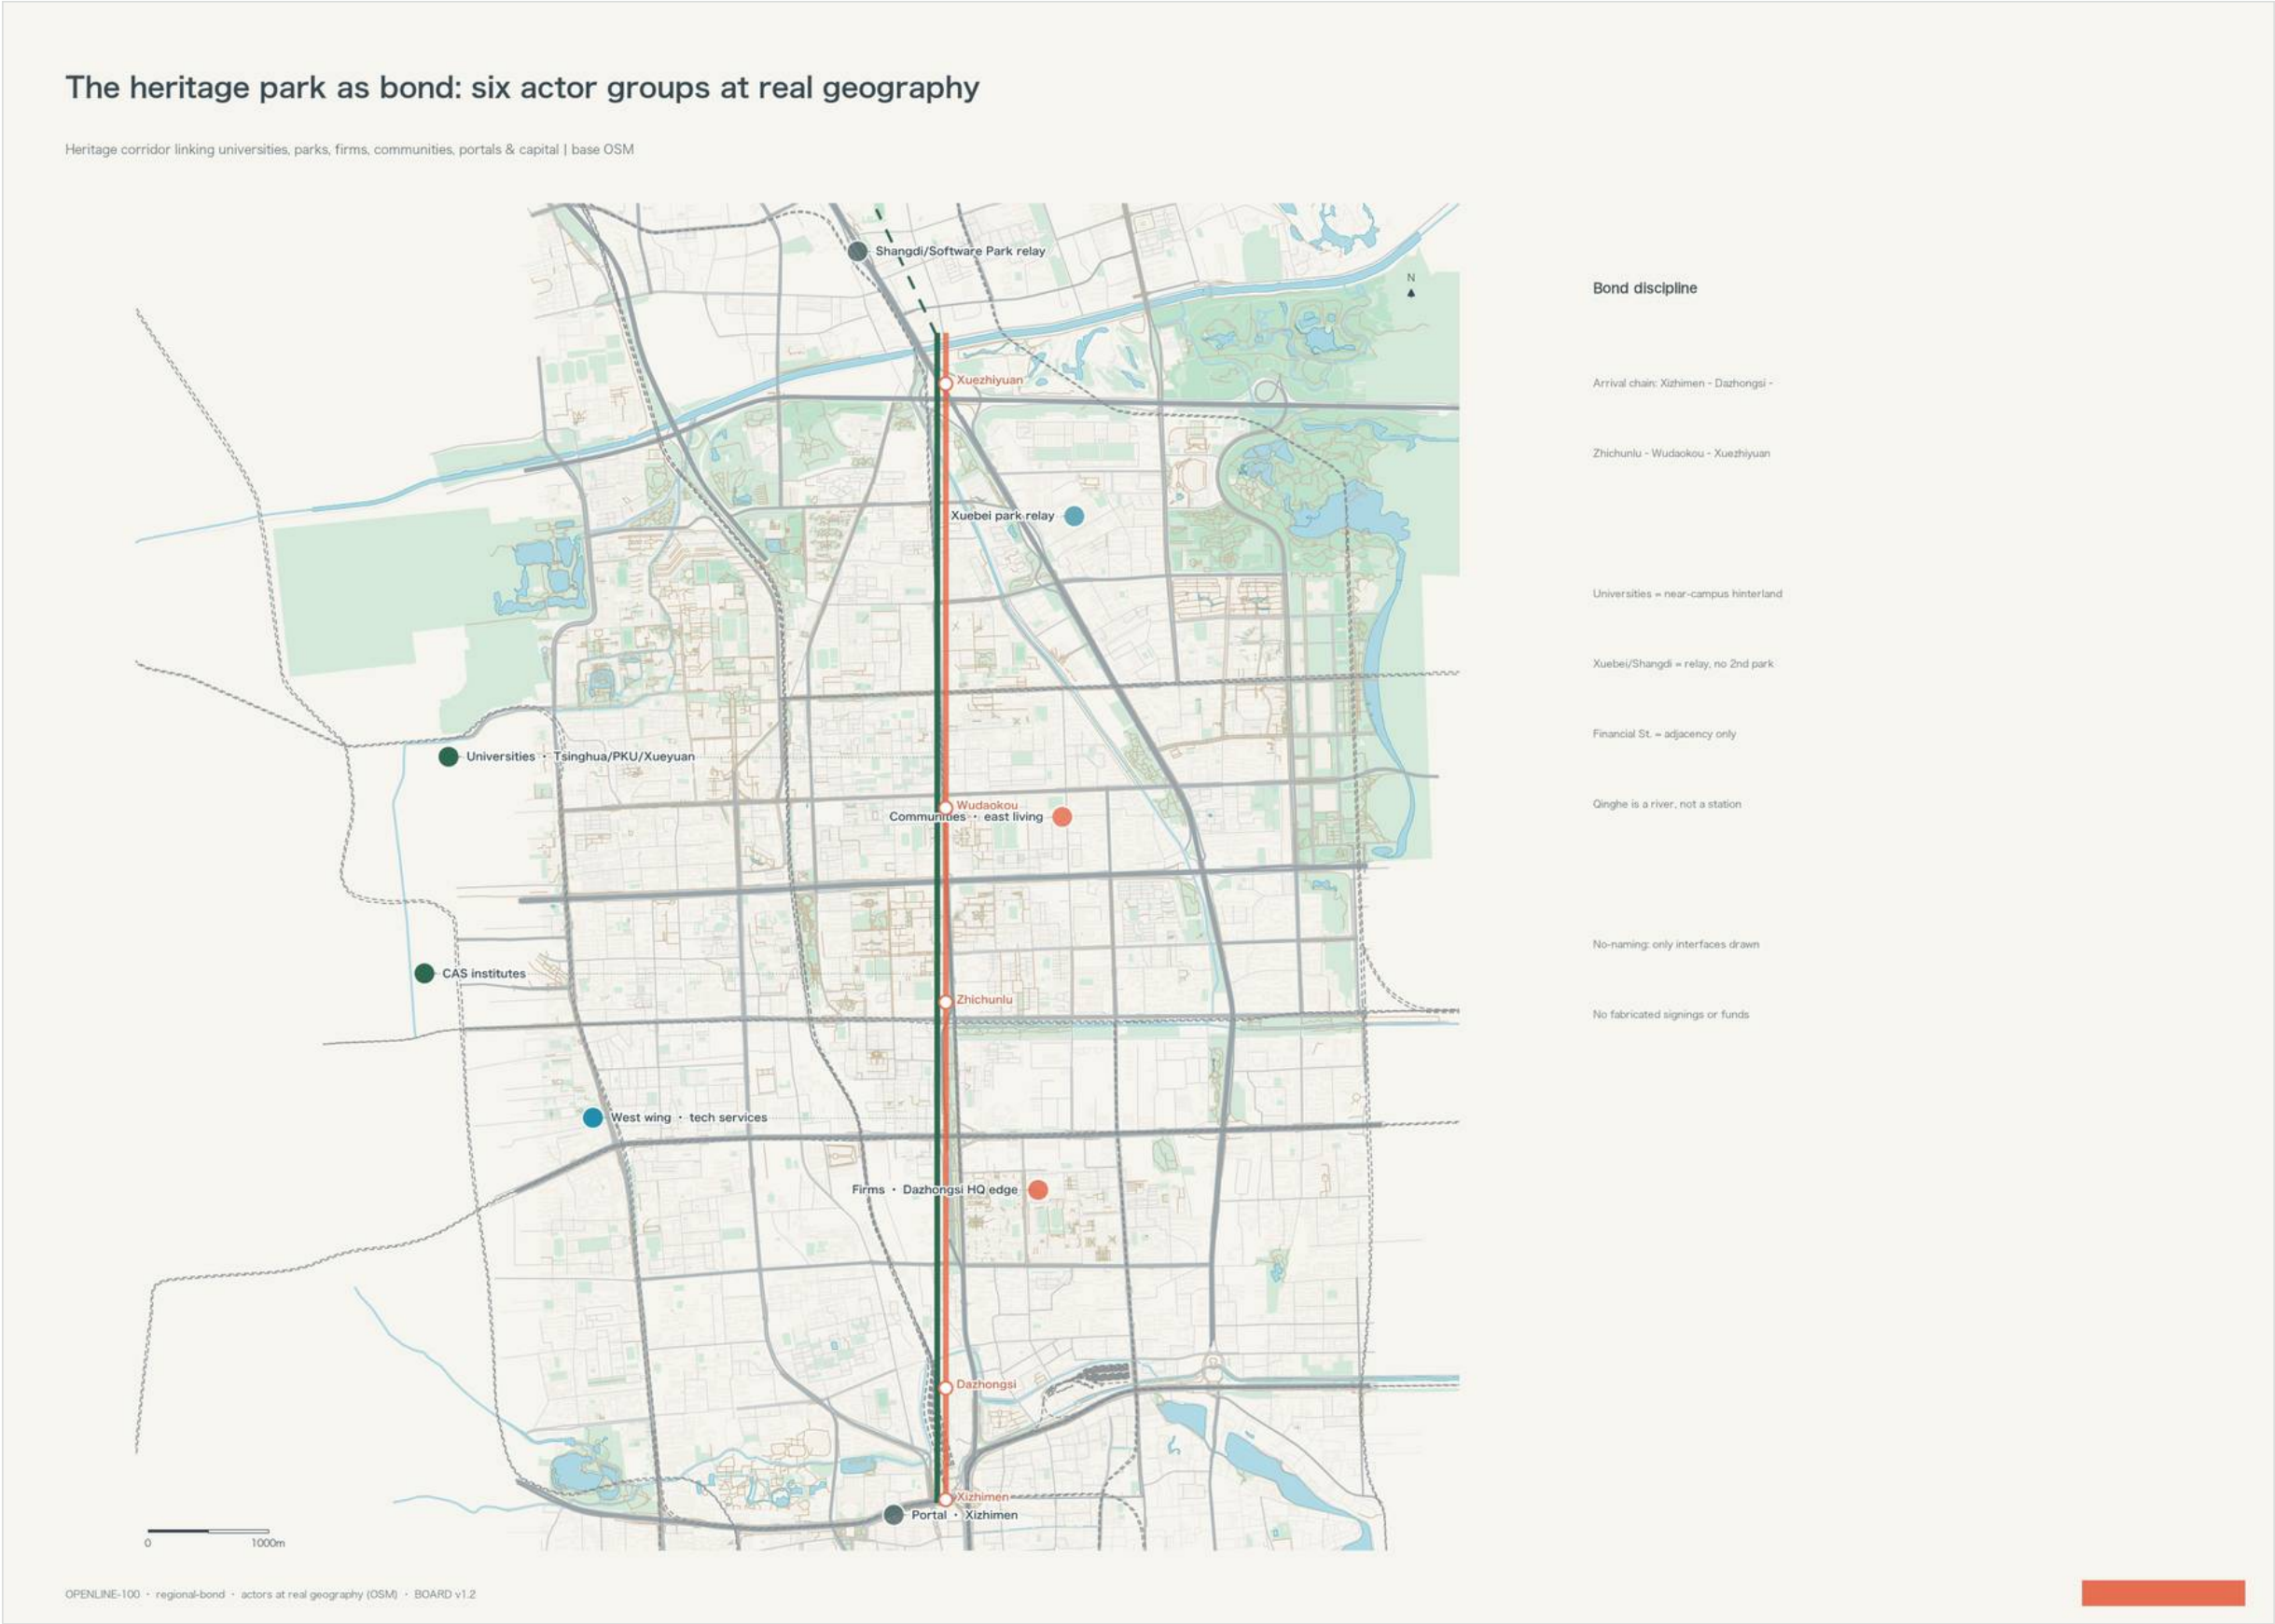

01 Site overview: five-layer structure and corridor axonometric

02 Regional structure: the corridor in northwest Beijing

03 Regional bond: university, innovation and cultural ties

PROVISIONAL boundary • discussion-grade concept • not approval geometry • full recalc on official data

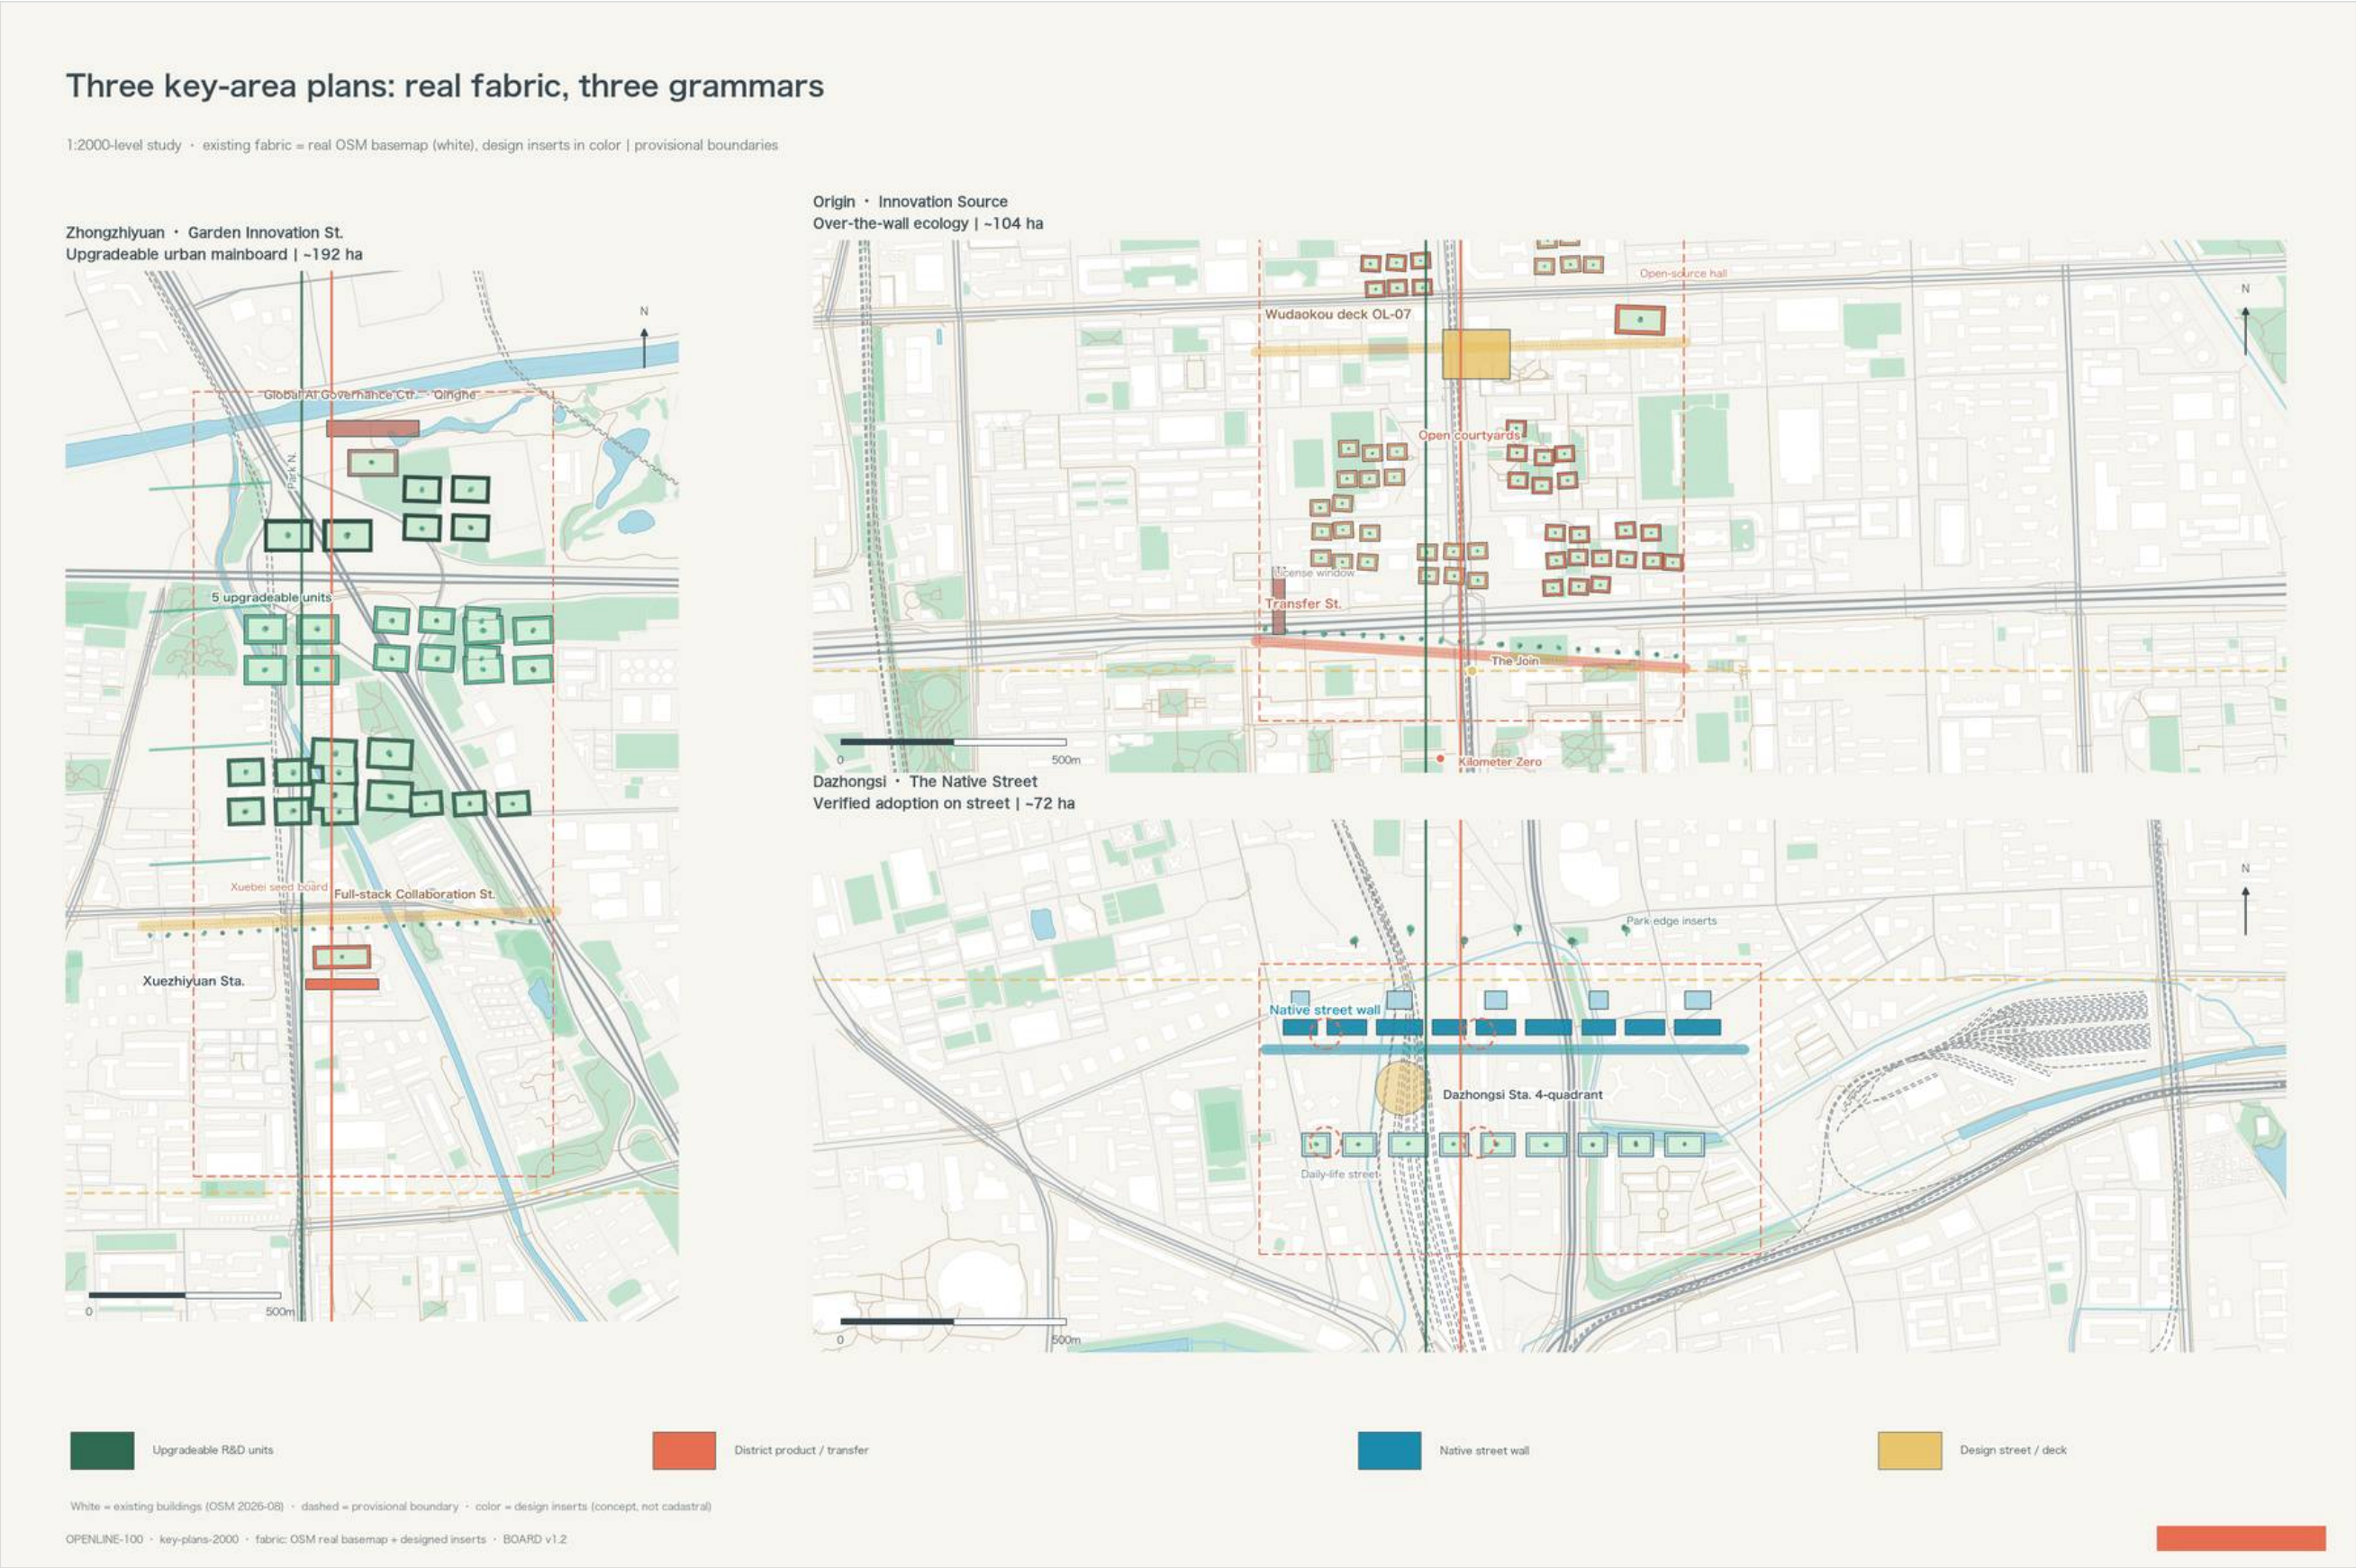

04 Land use and structure: one spine, three cores, five segments

05 Three key areas: Co-Wisdom Garden, Origin, Dazhongsi

06 1:2000 key-area masterplans on real OSM urban fabric

07 Massing and skyline control

Six typical streets, one Openline grammar

Section series A - F • not engineering • walking ≥ 50% at all times • robot band never becomes car lane

A • L1 Fact Line (walkable rail)

B • L2 Service Line (stations dock)

C • Collaboration St. (logistics behind)

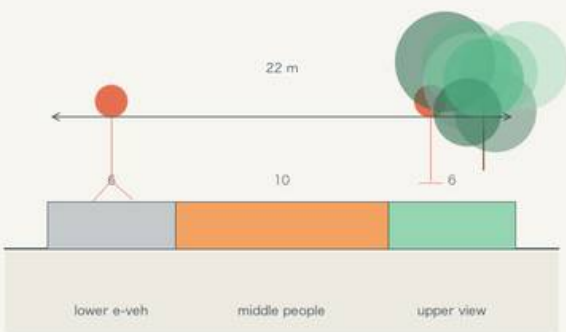

D • Transfer St. (windows on edge)

E • Native St. (trial / life split)

F • Deck (e-vehicle / people / view)

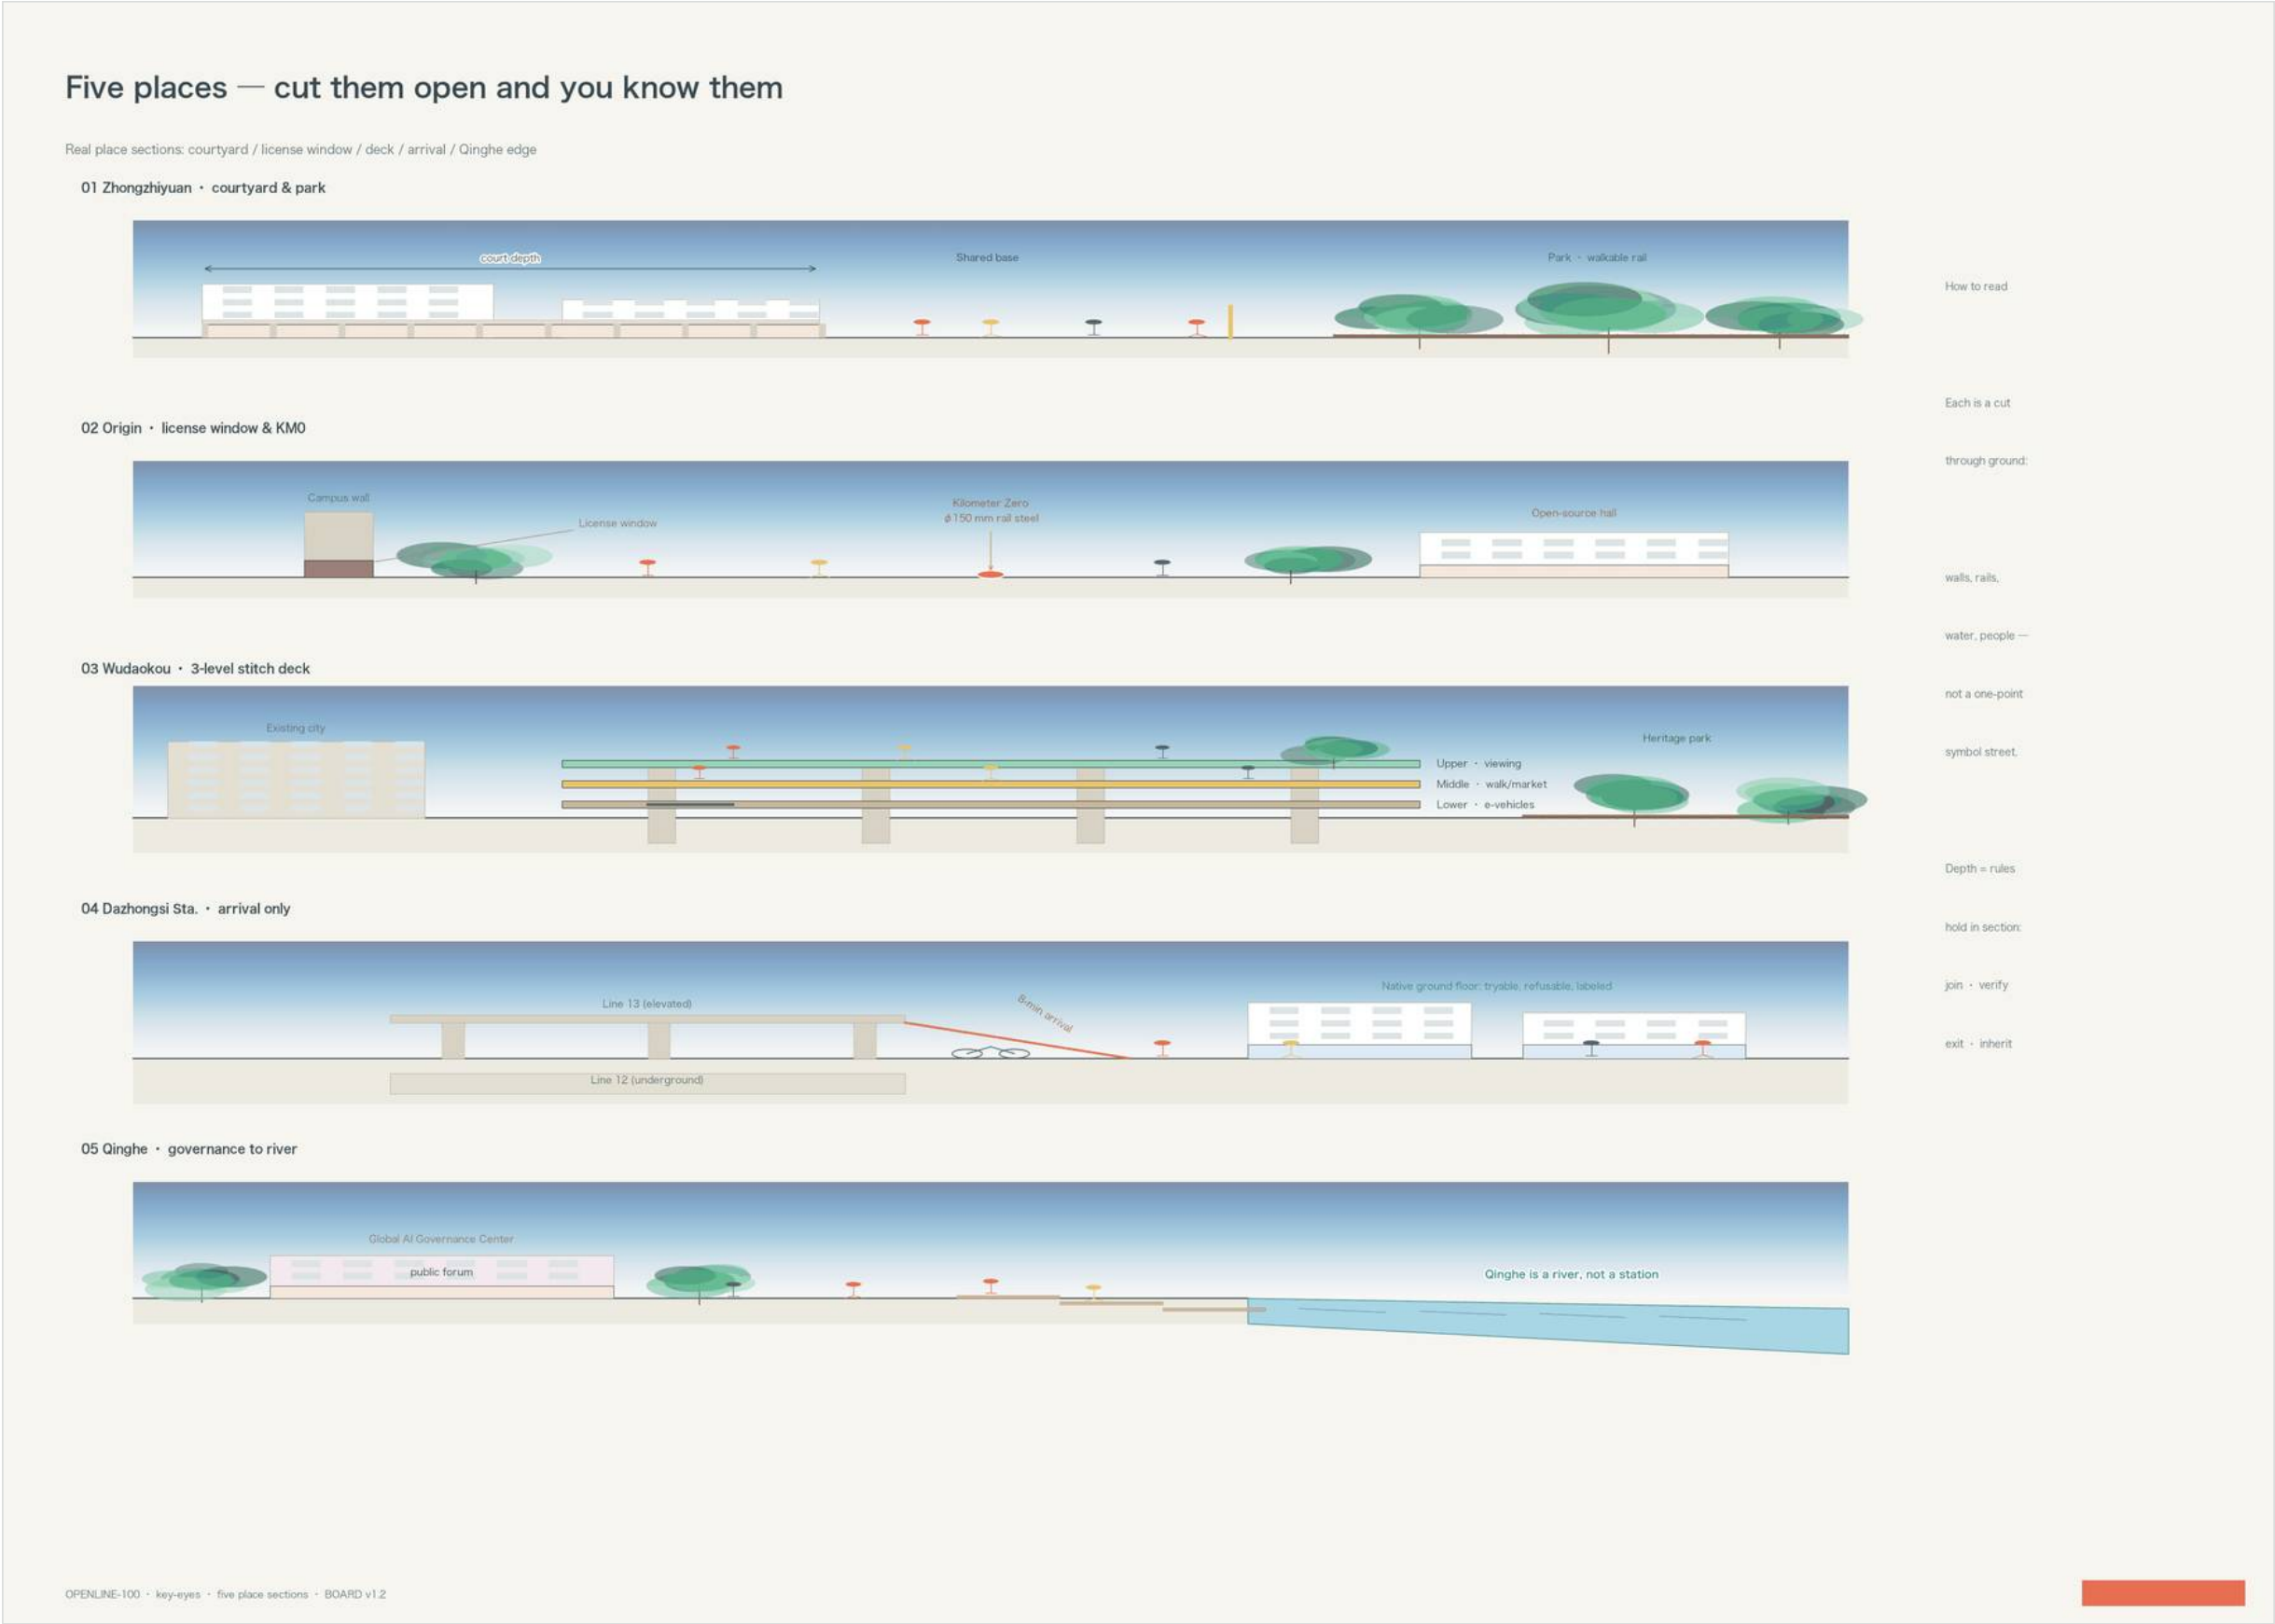

OPENLINE-100 • key-sections • walking ≥ 50% always • BOARD v1.2

08 Six typical cross-sections

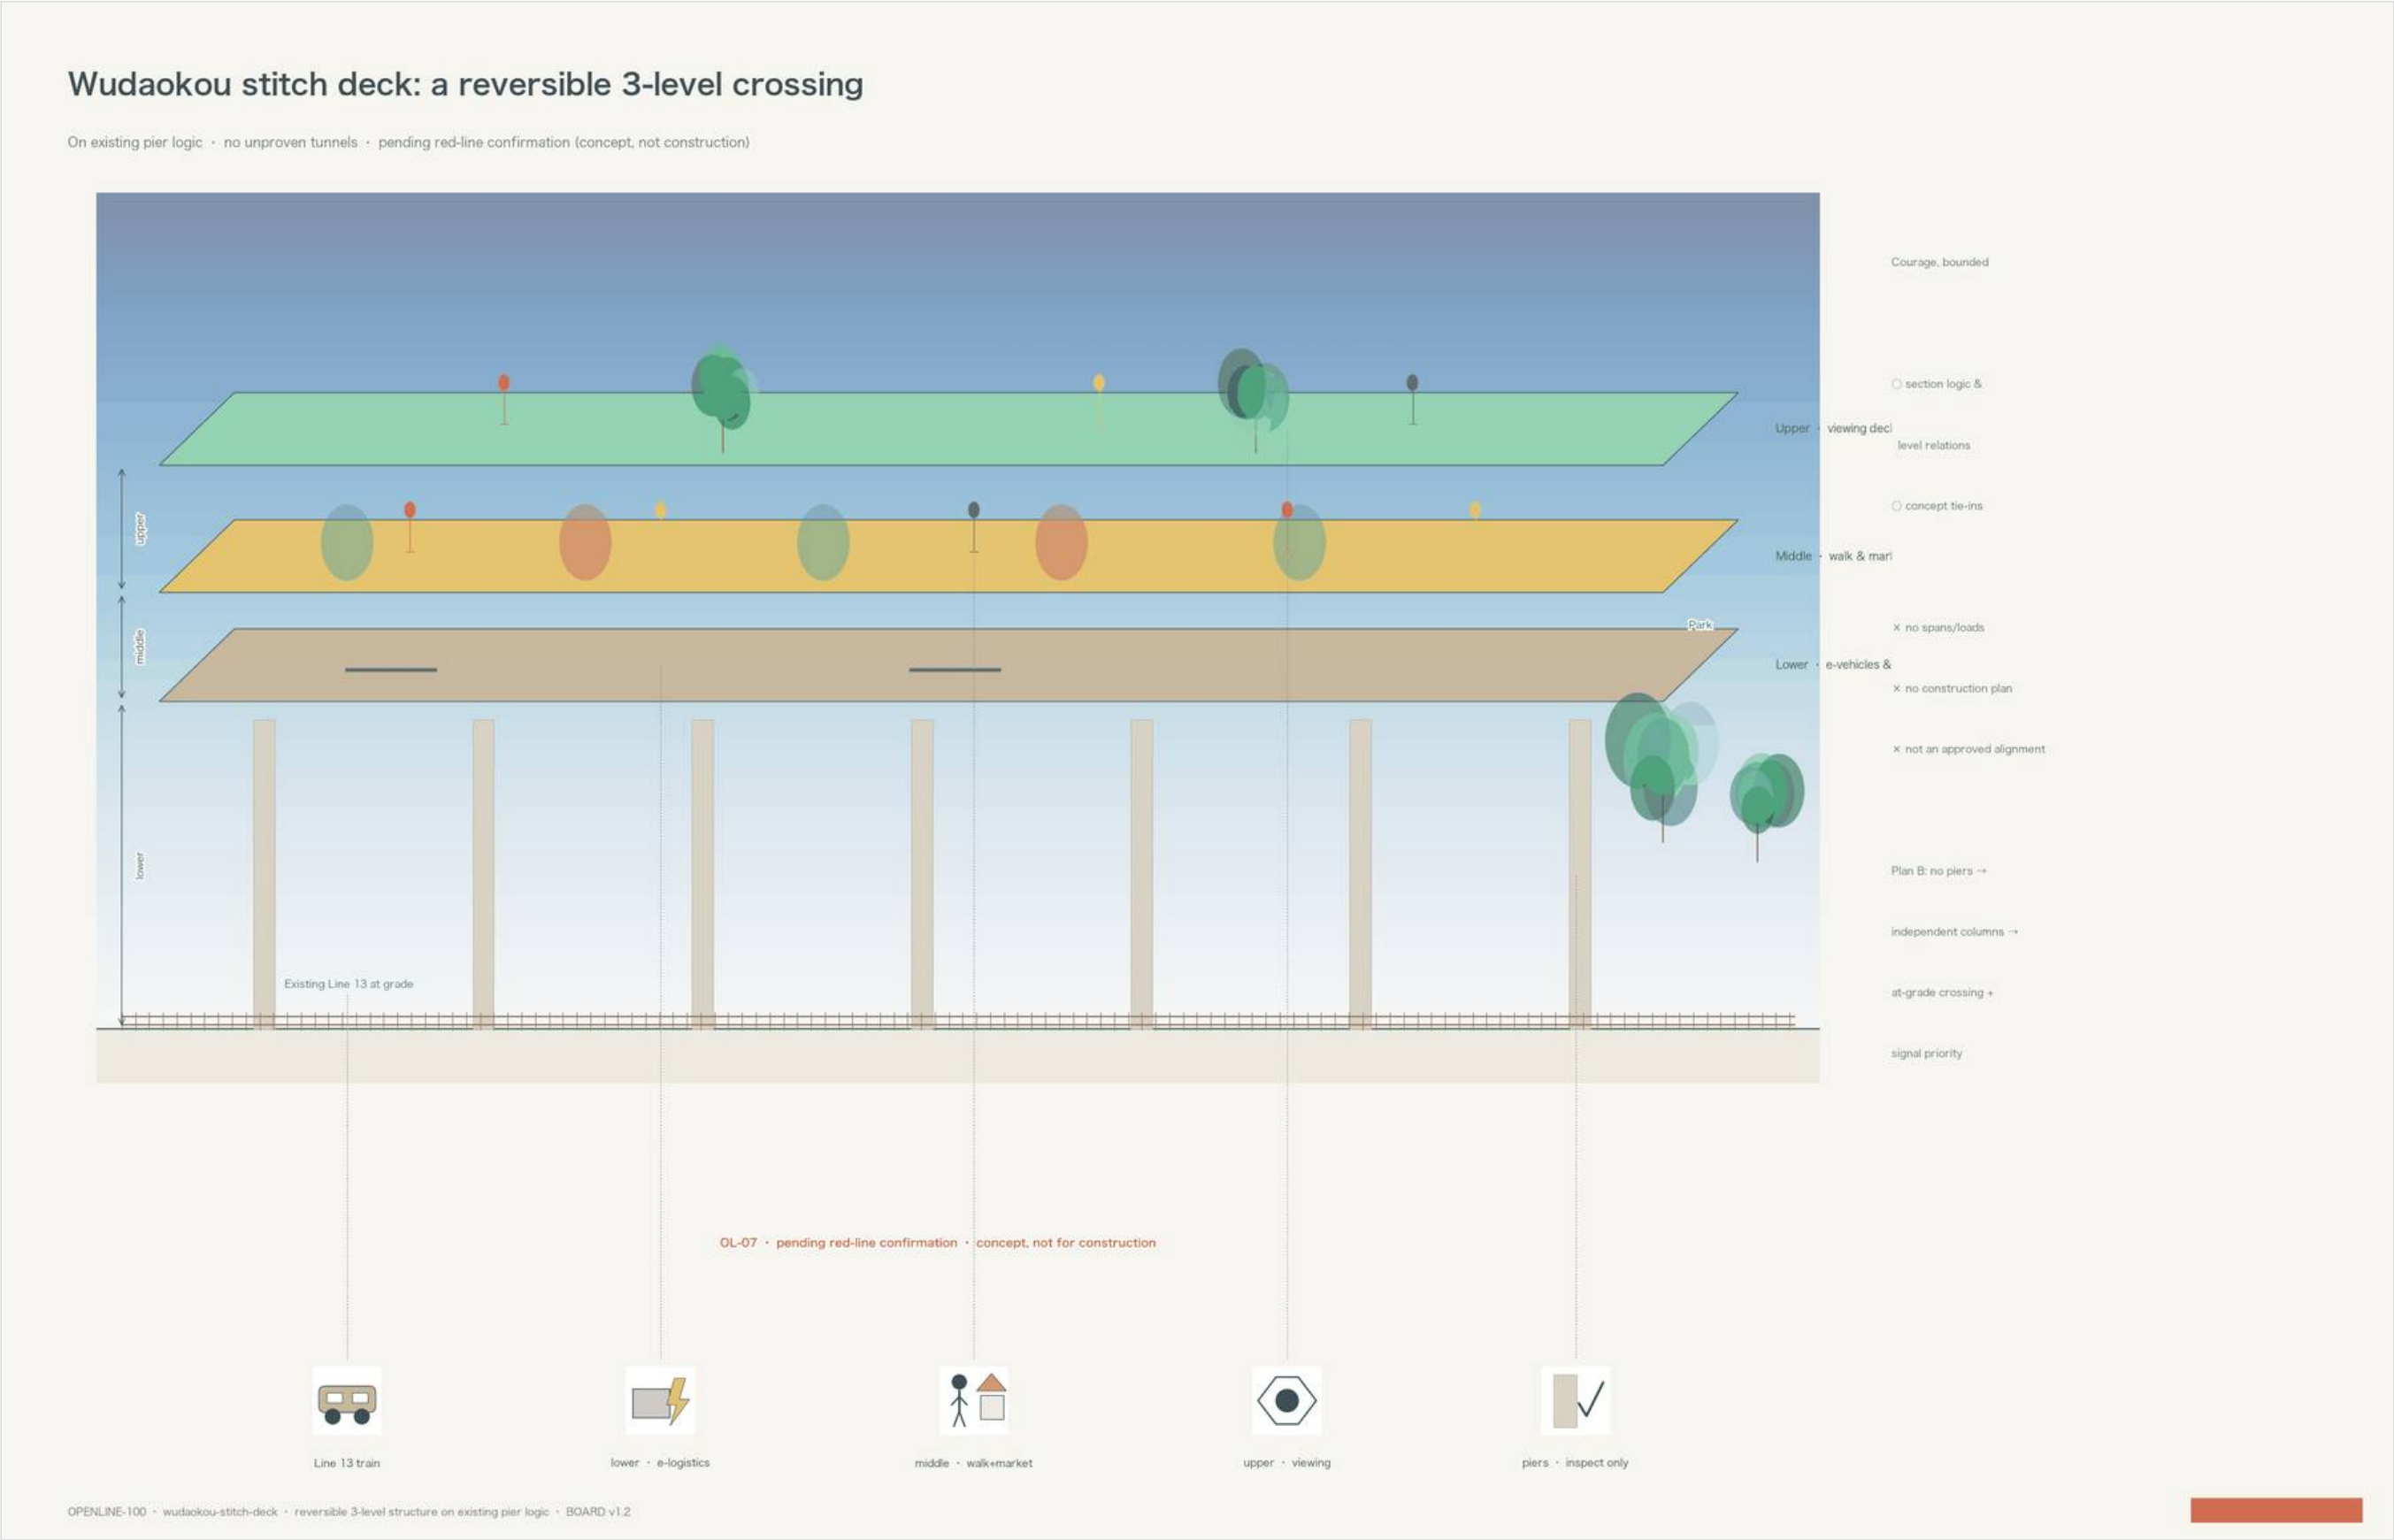

PROVISIONAL boundary • discussion-grade concept • not approval geometry • full recalc on official data

Base map © OpenStreetMap contributors

09 Five urban-eye place sections

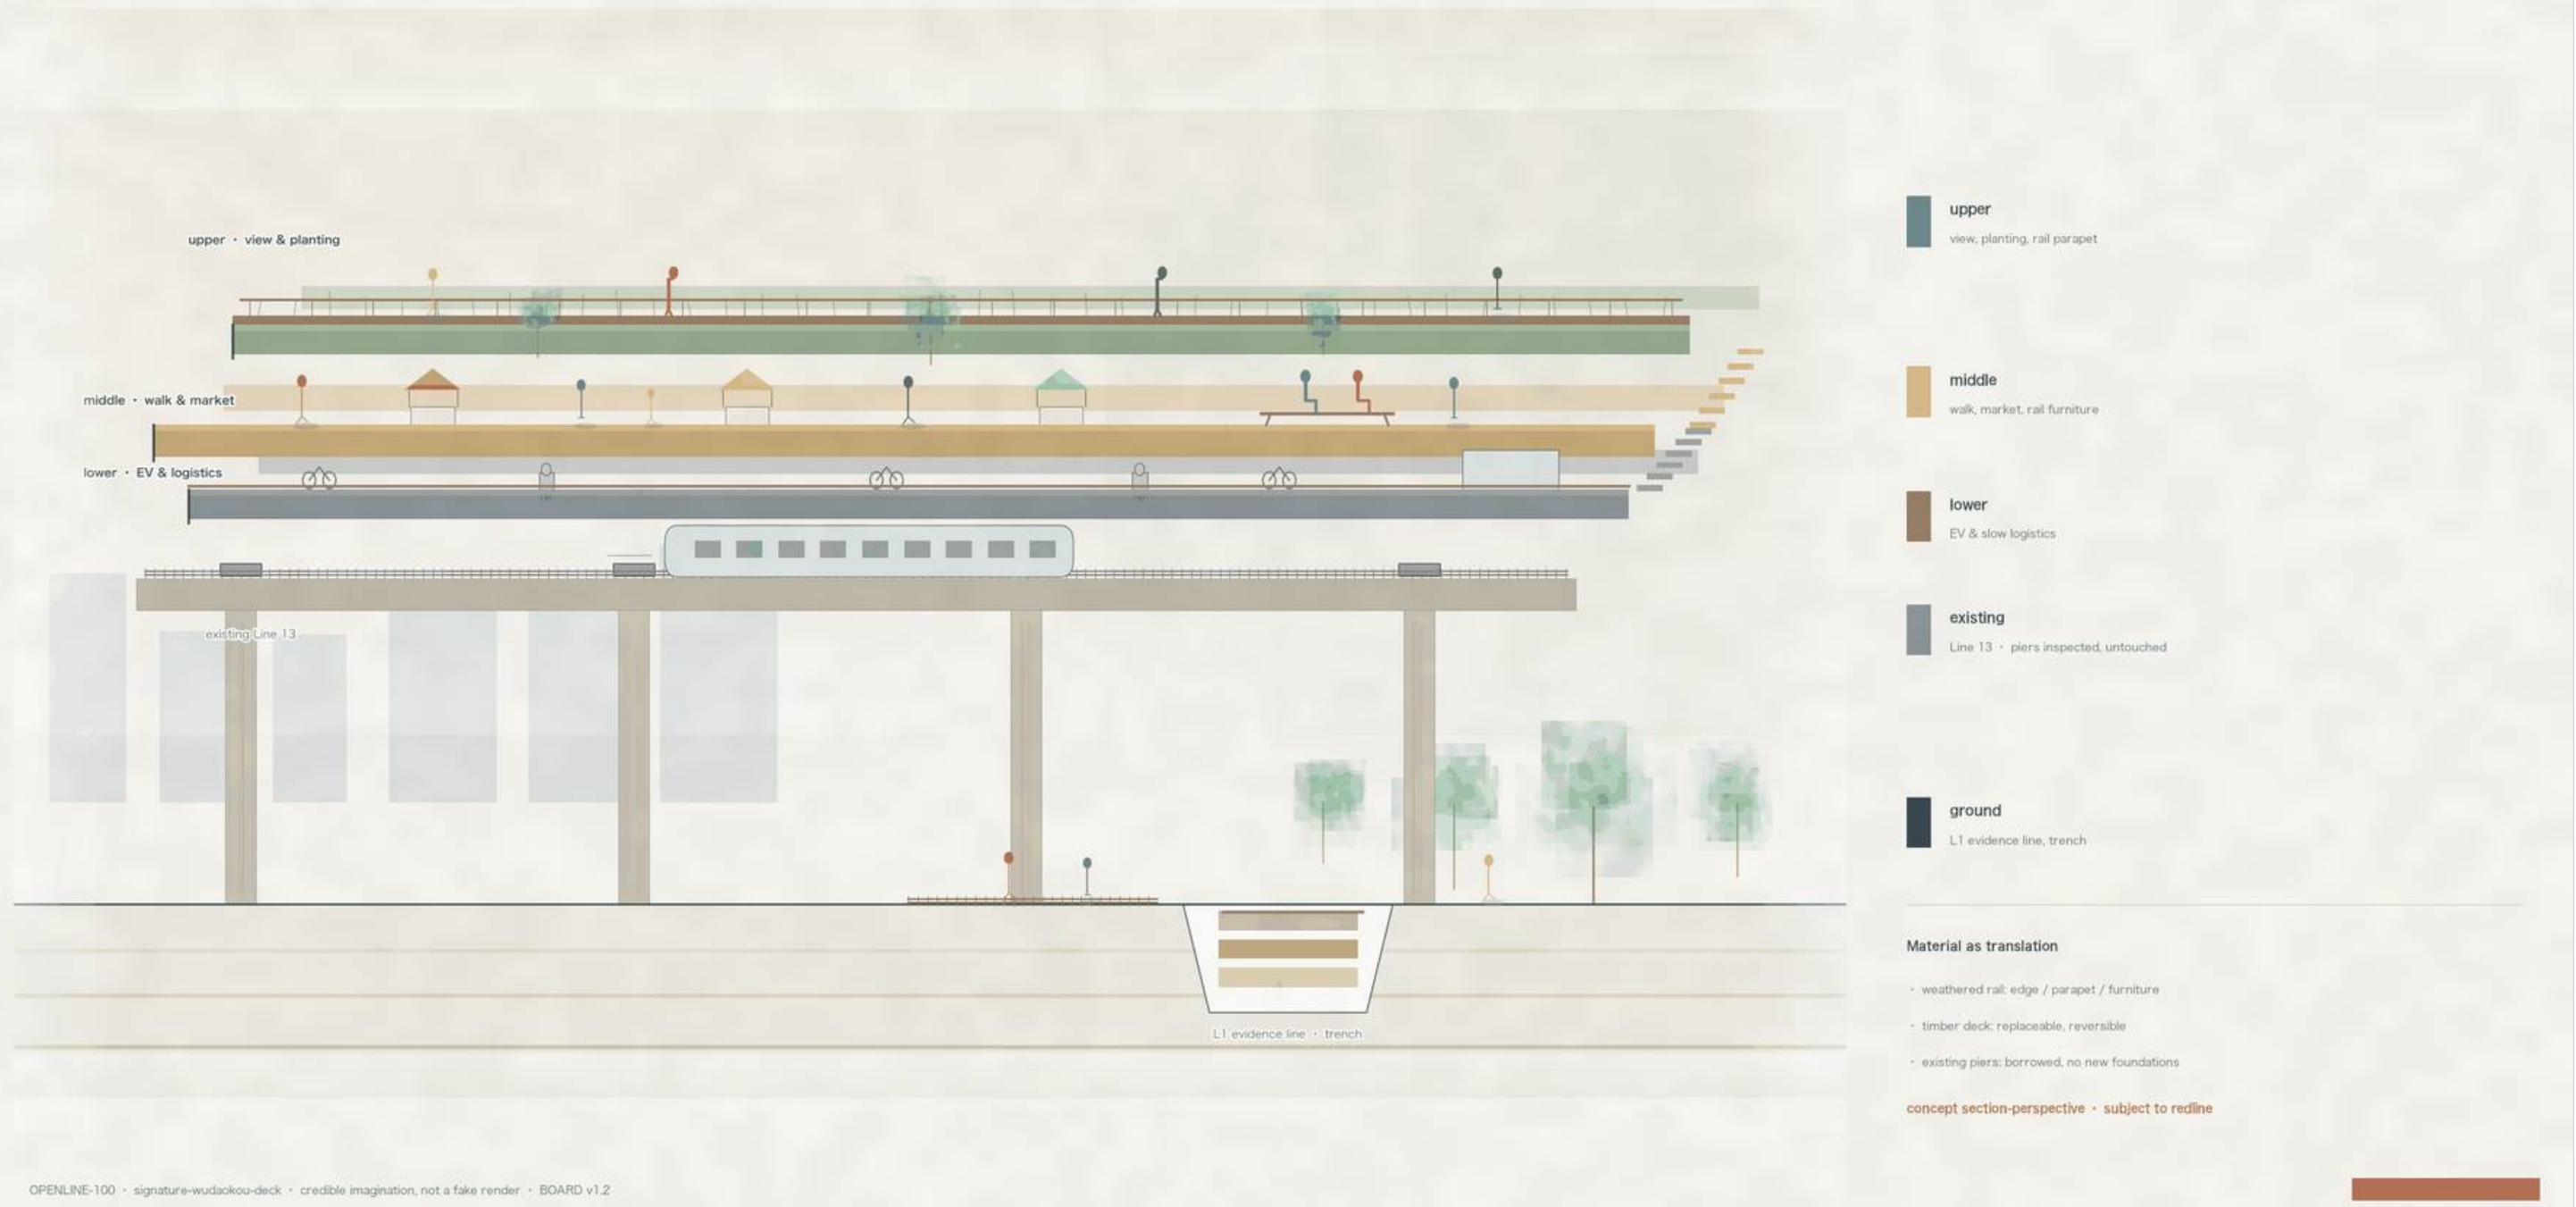

Base map © OpenStreetMap contributors

10 Wudaokou stitch deck: three vertical layers

Wudaokou stitch deck: the boldest move drawn as credible everyday life

Section-perspective • material / level / real people • hand edges keep concept honest | OL-07

11 Signature: deck section-perspective • material, levels, real people

12 Rails made visible: the old alignment stitched into real fabric

Let the rails grow into the ground: five material translations

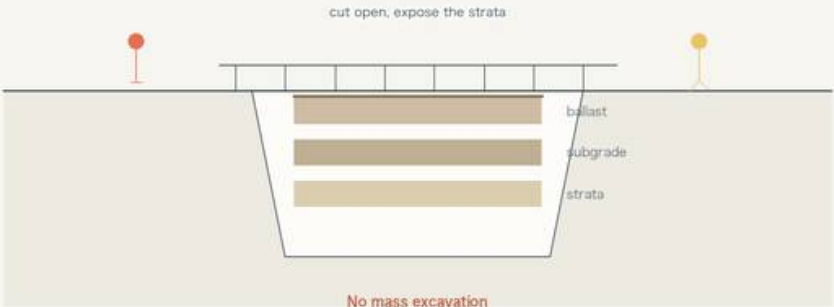

Components enter the public library, versioned via Inherit · sound & inscriptions pilot only after review

Ground · rail as paving

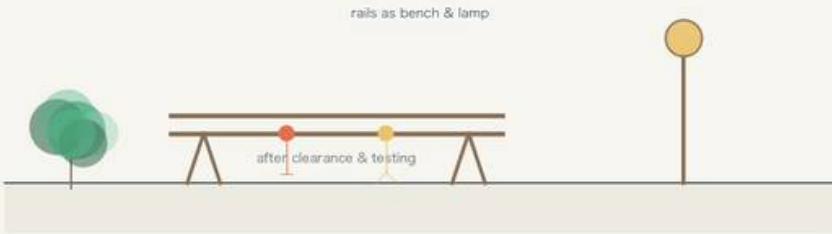

No unreachable exhibits

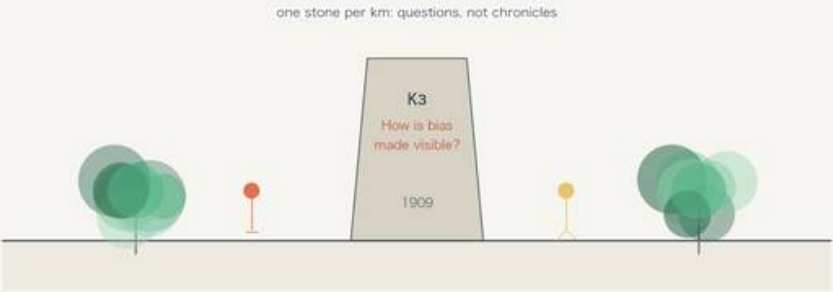

Section · archaeology trench

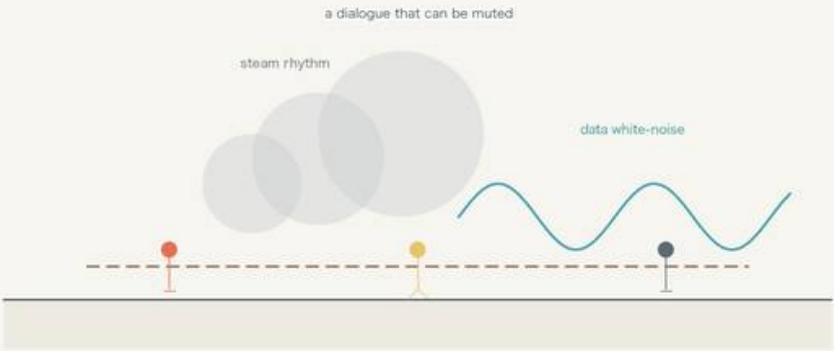

Furniture · rails reused

Narrative · question stones

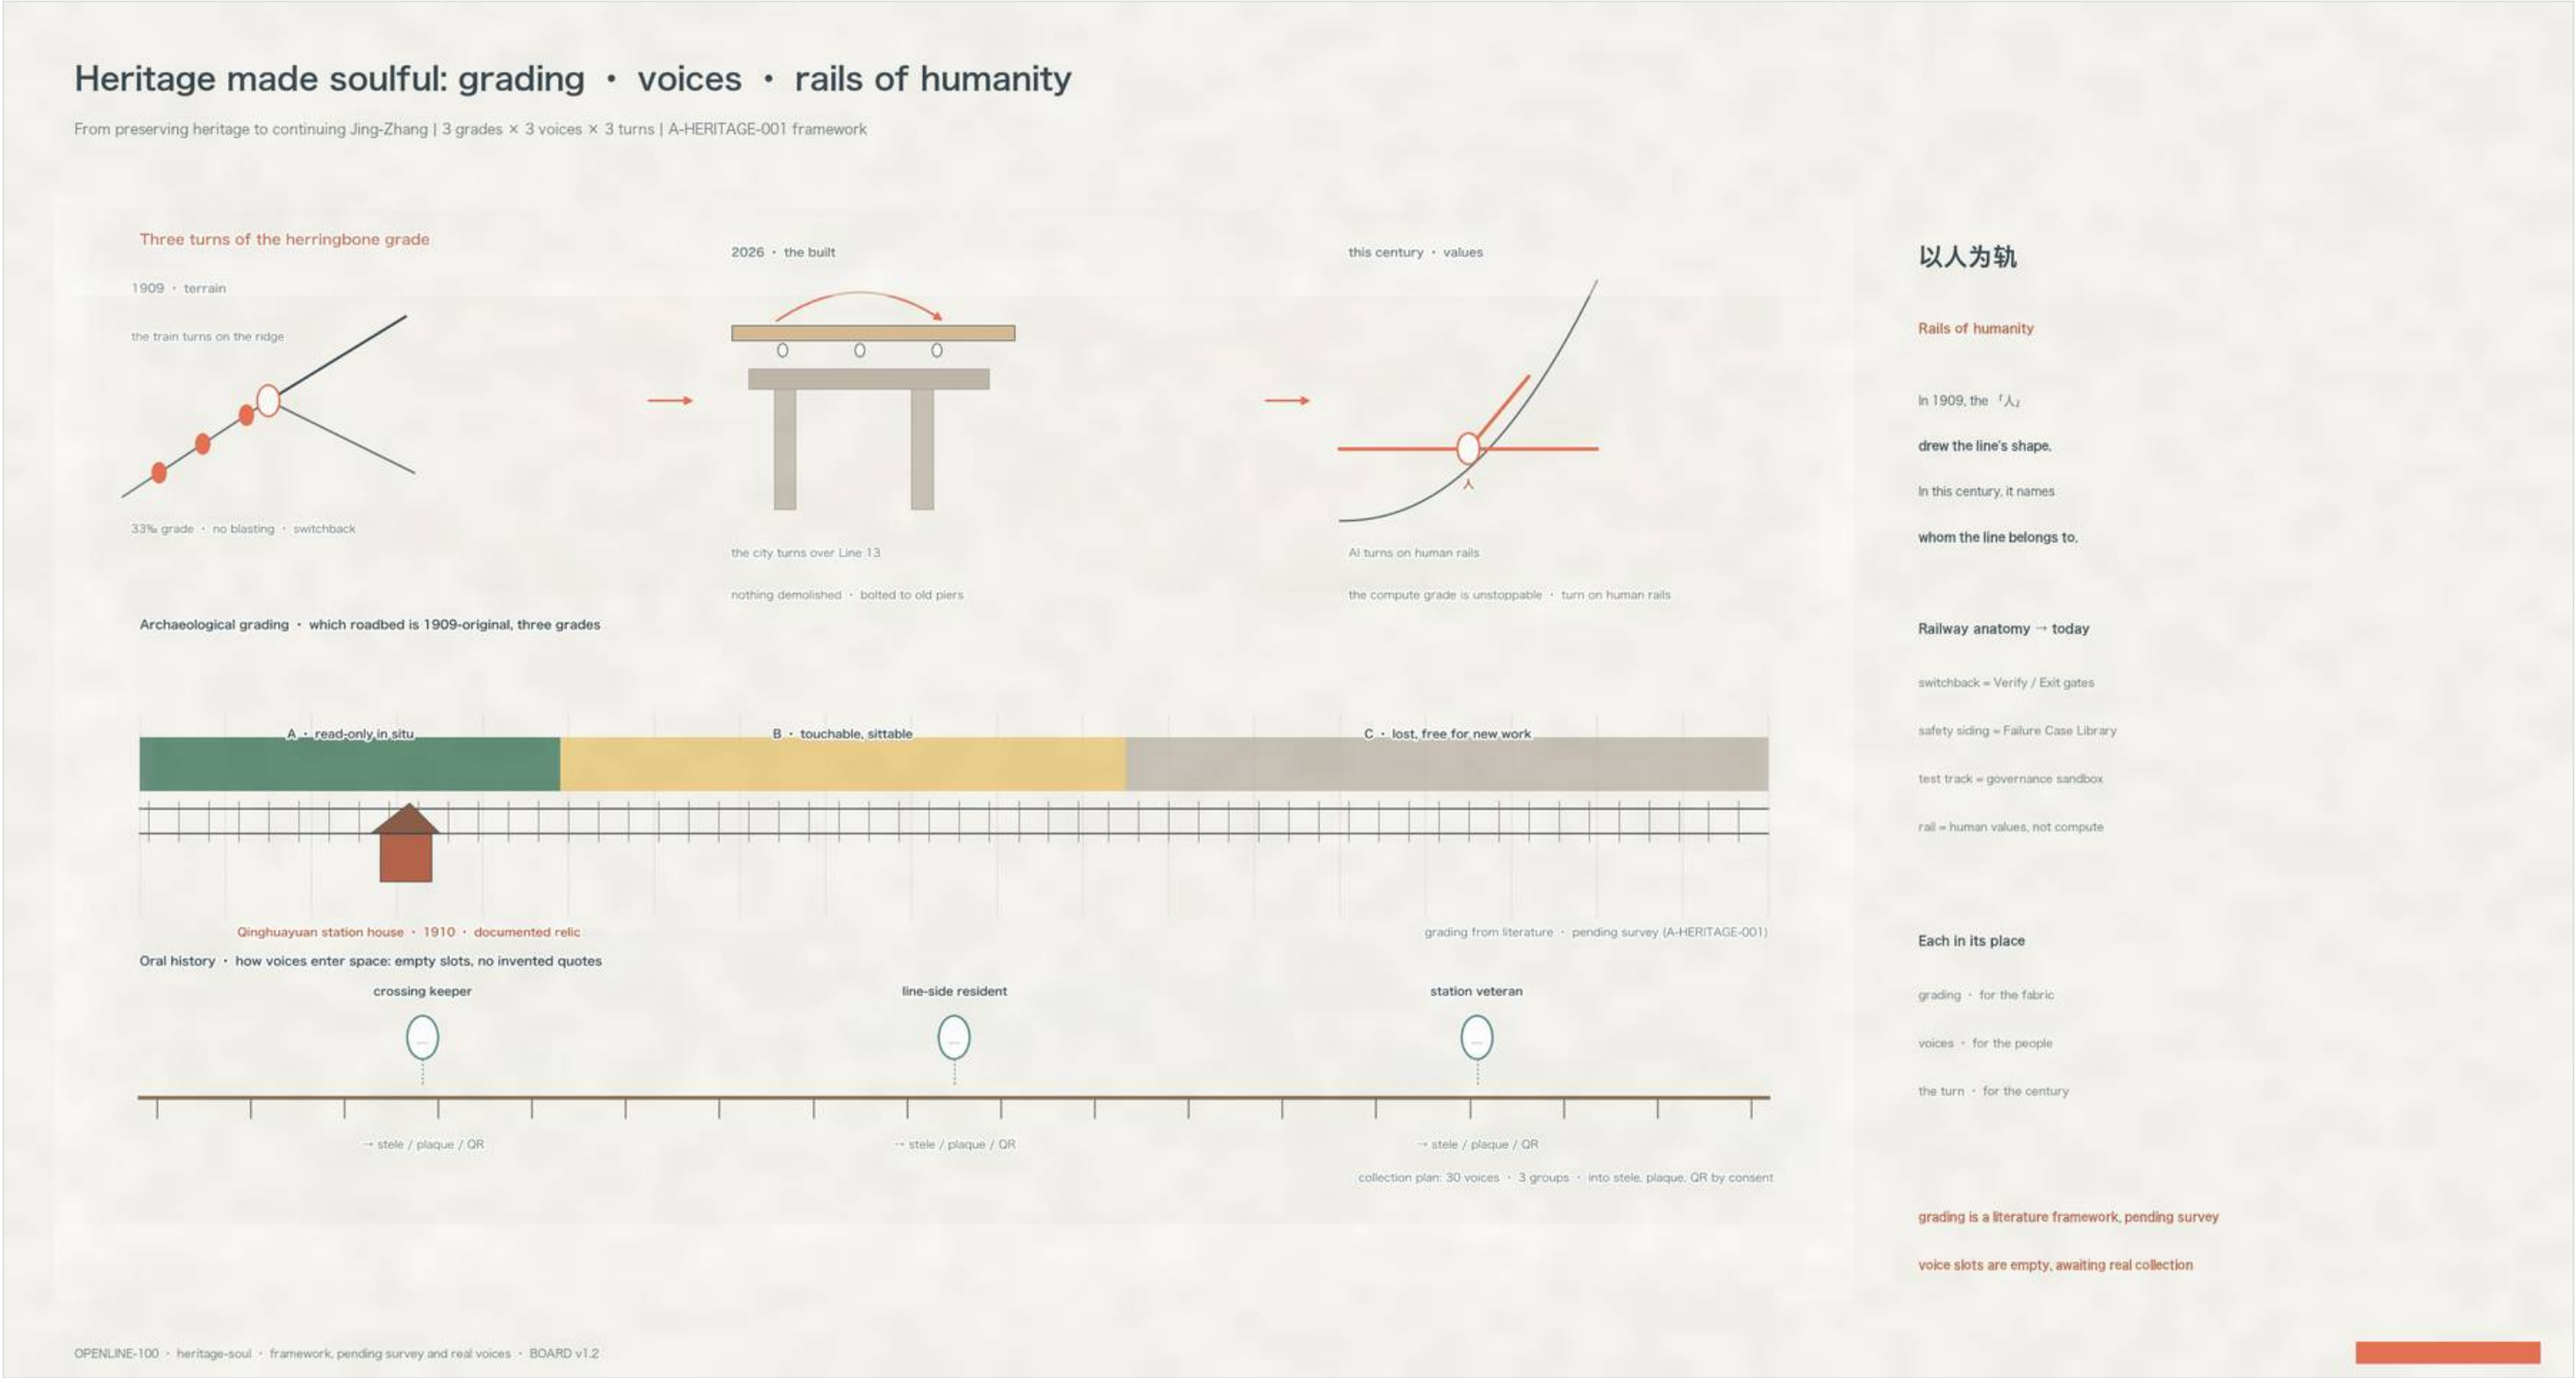

Sound · steam × white-noise

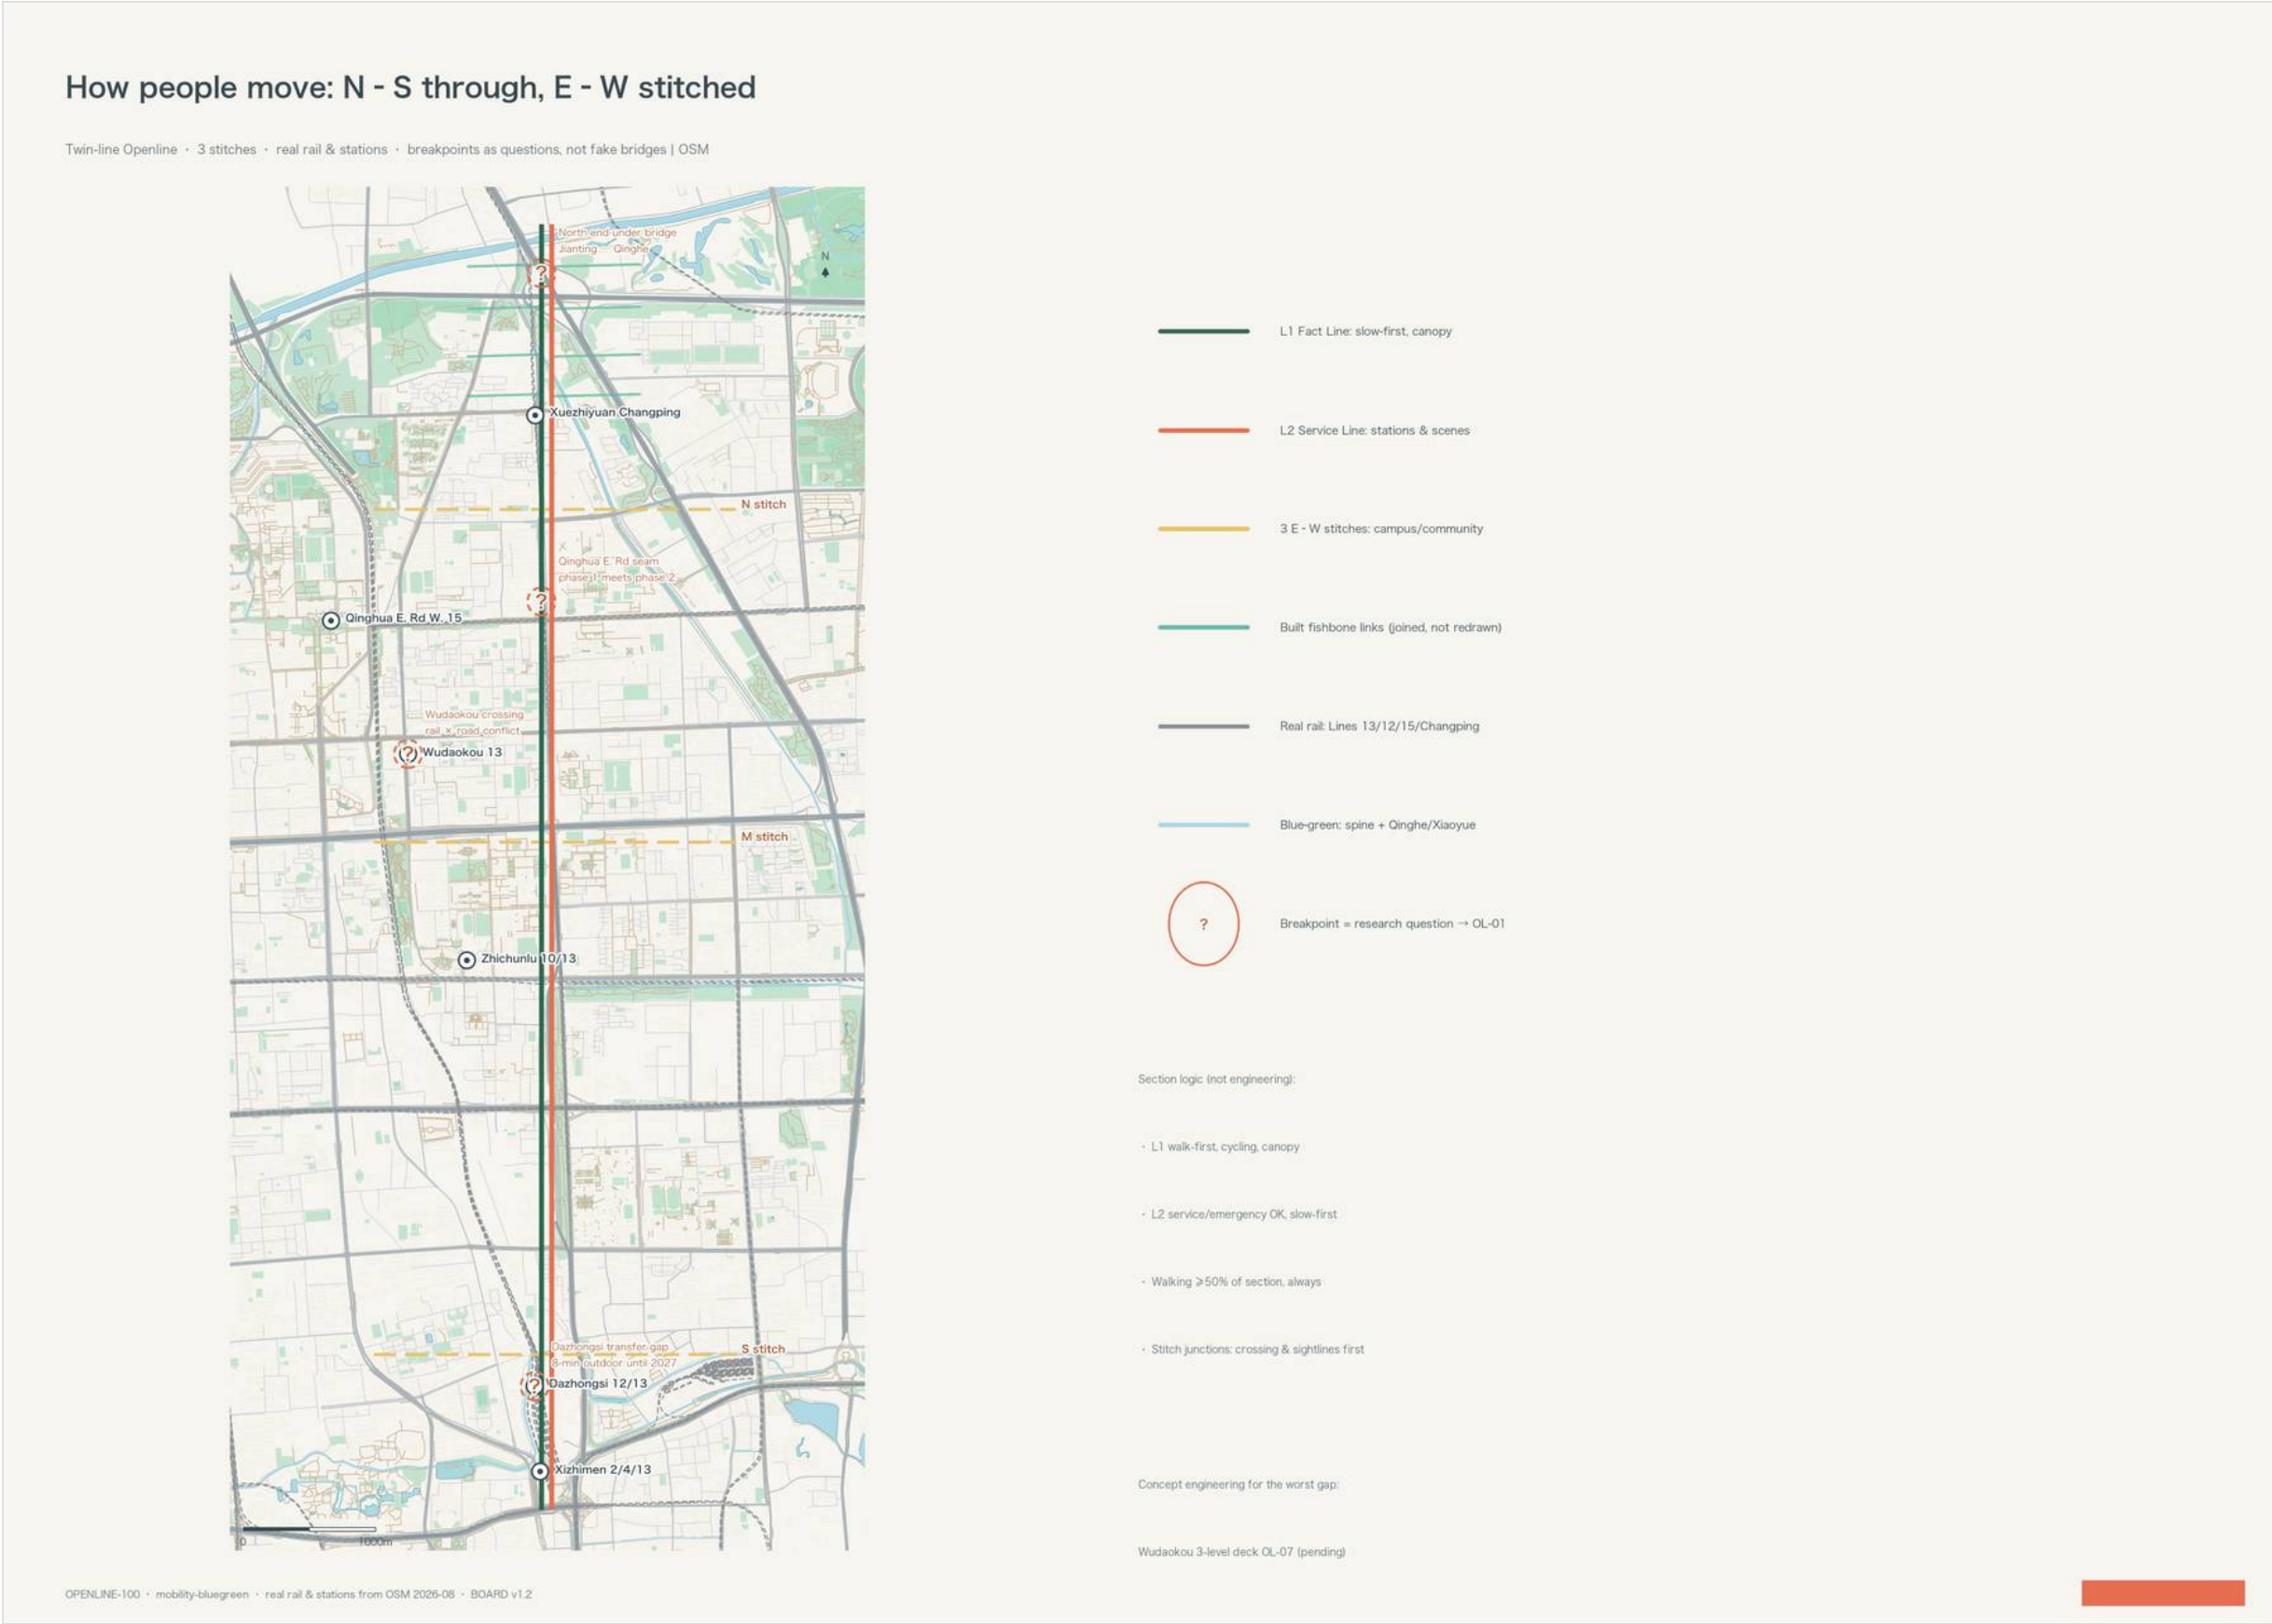

Three rules before entering the library

- ① Reuse only after clearance & safety testing
- ② Versioned via Inherit: join / exit / inherit
- ③ Sound & inscriptions pilot after permit & review

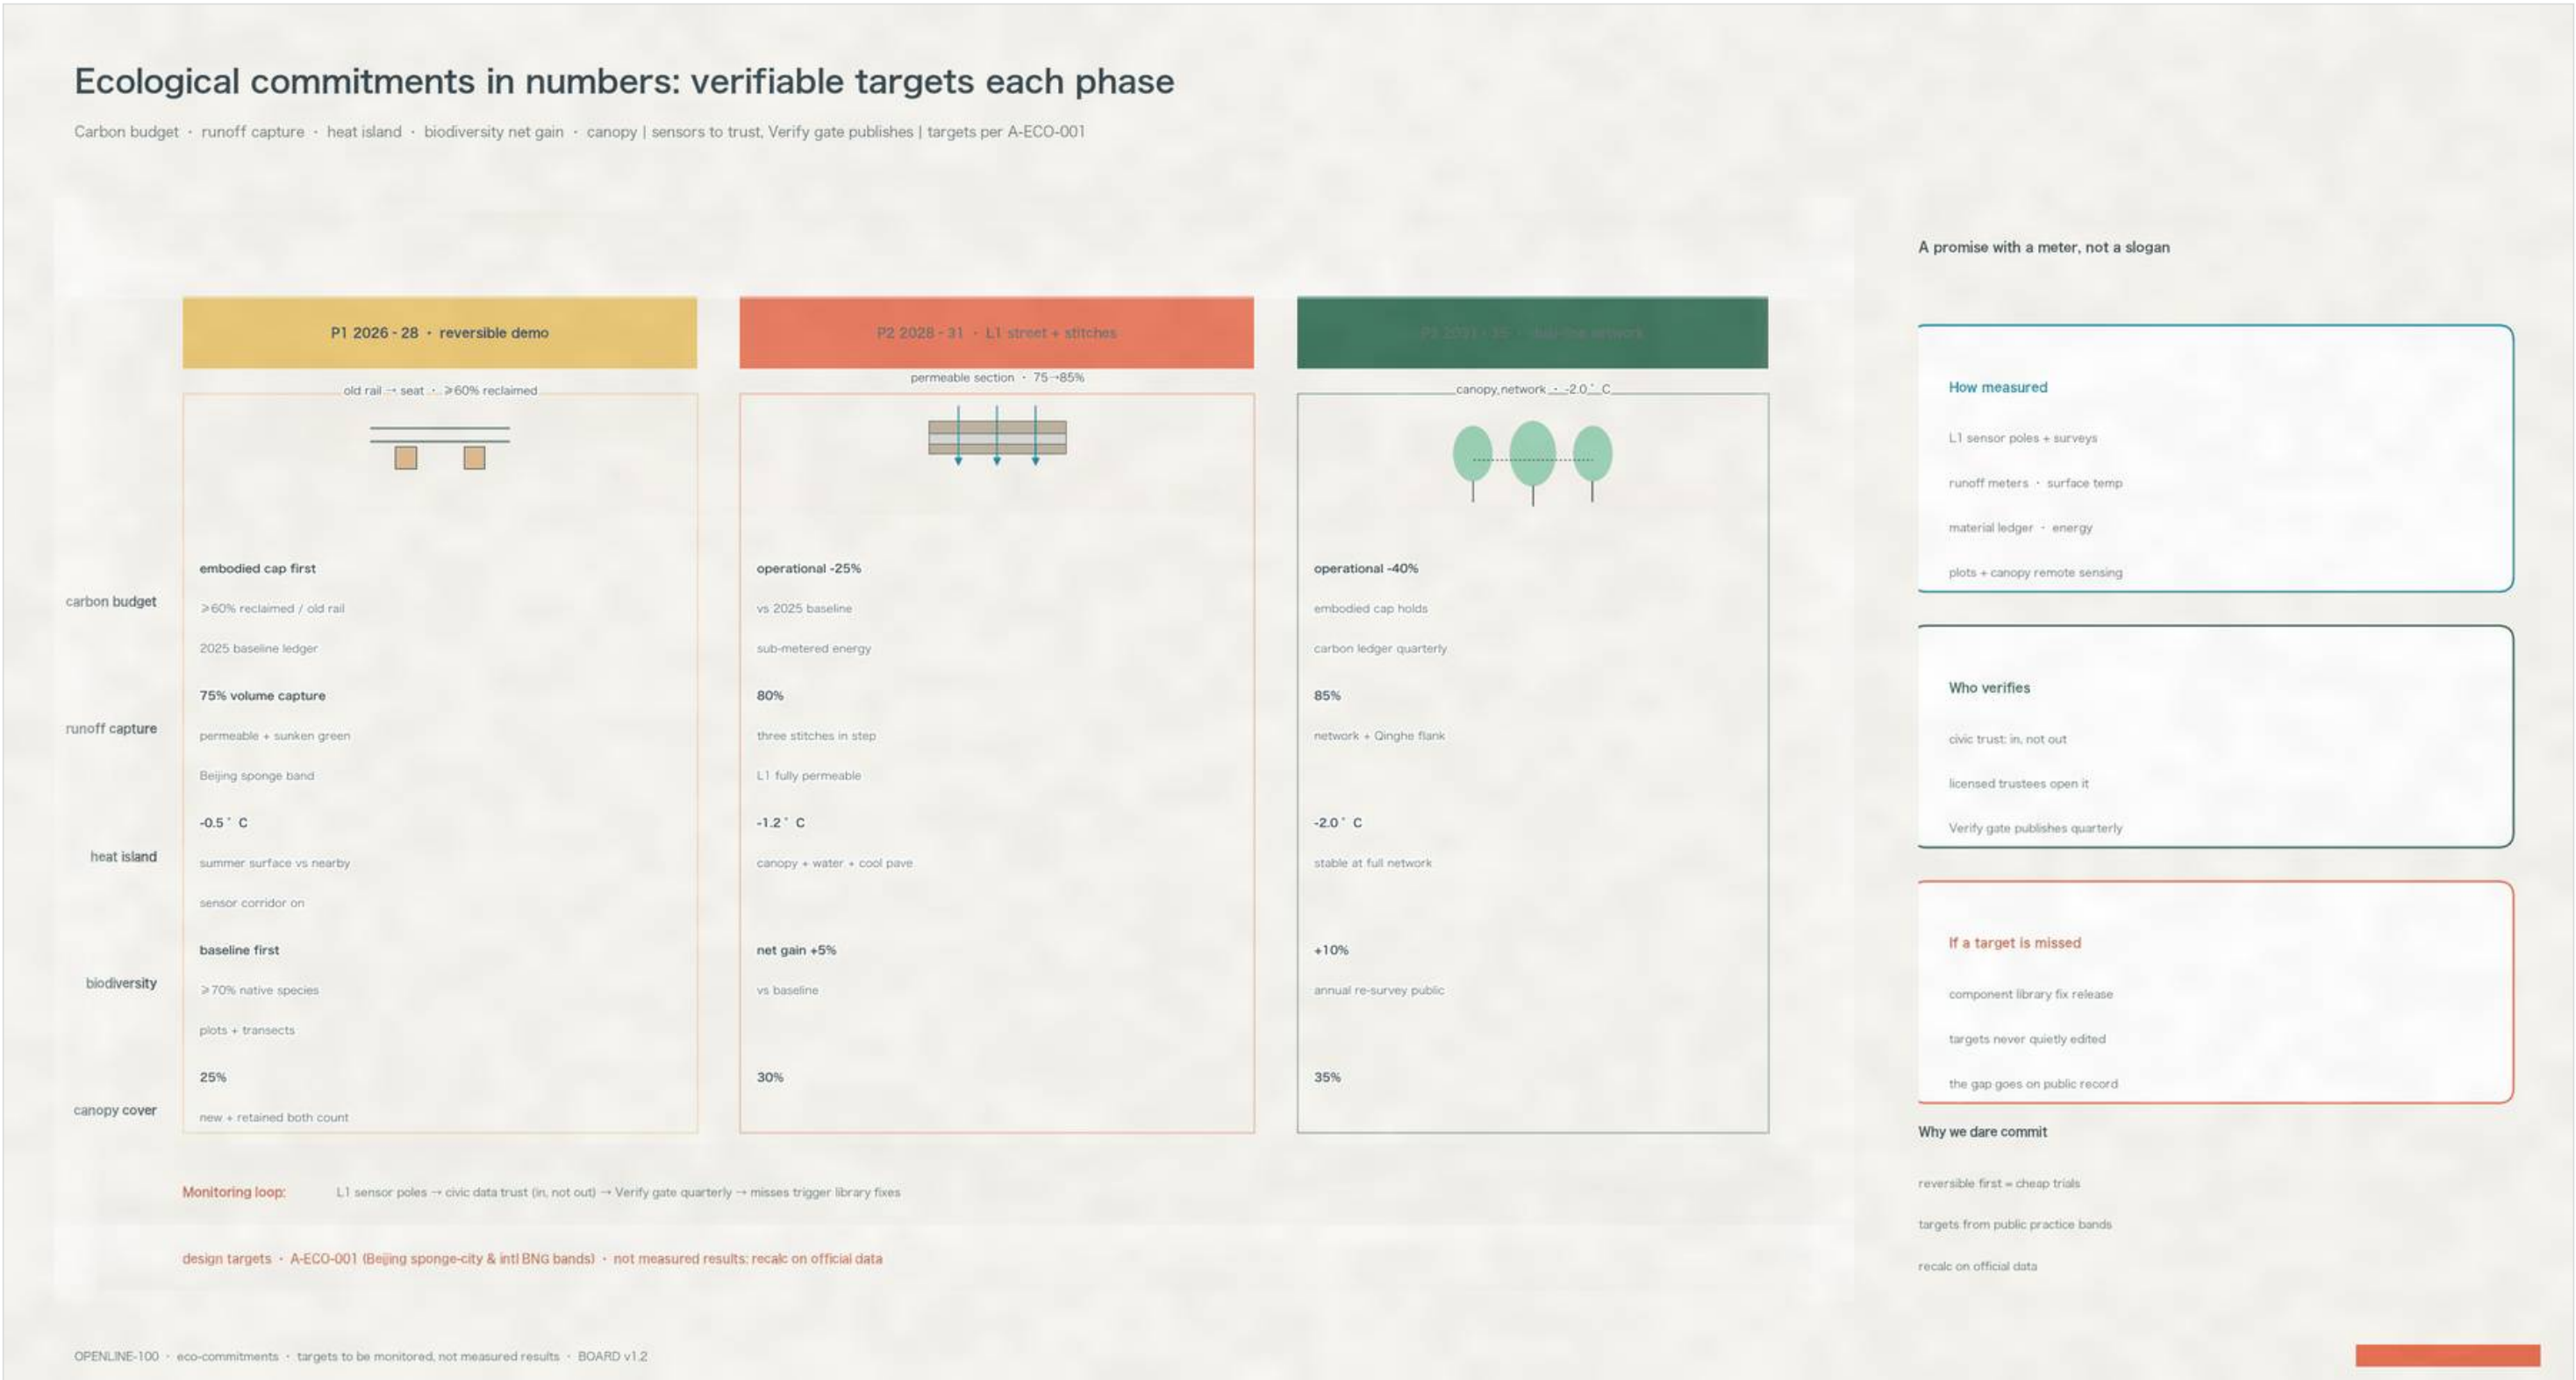

All five share one ground: rails stay in the street.

15 Slow mobility and blue-green network

OPENLINE-100 · eco-commitments · targets to be monitored, not measured results · BOARD v1.2

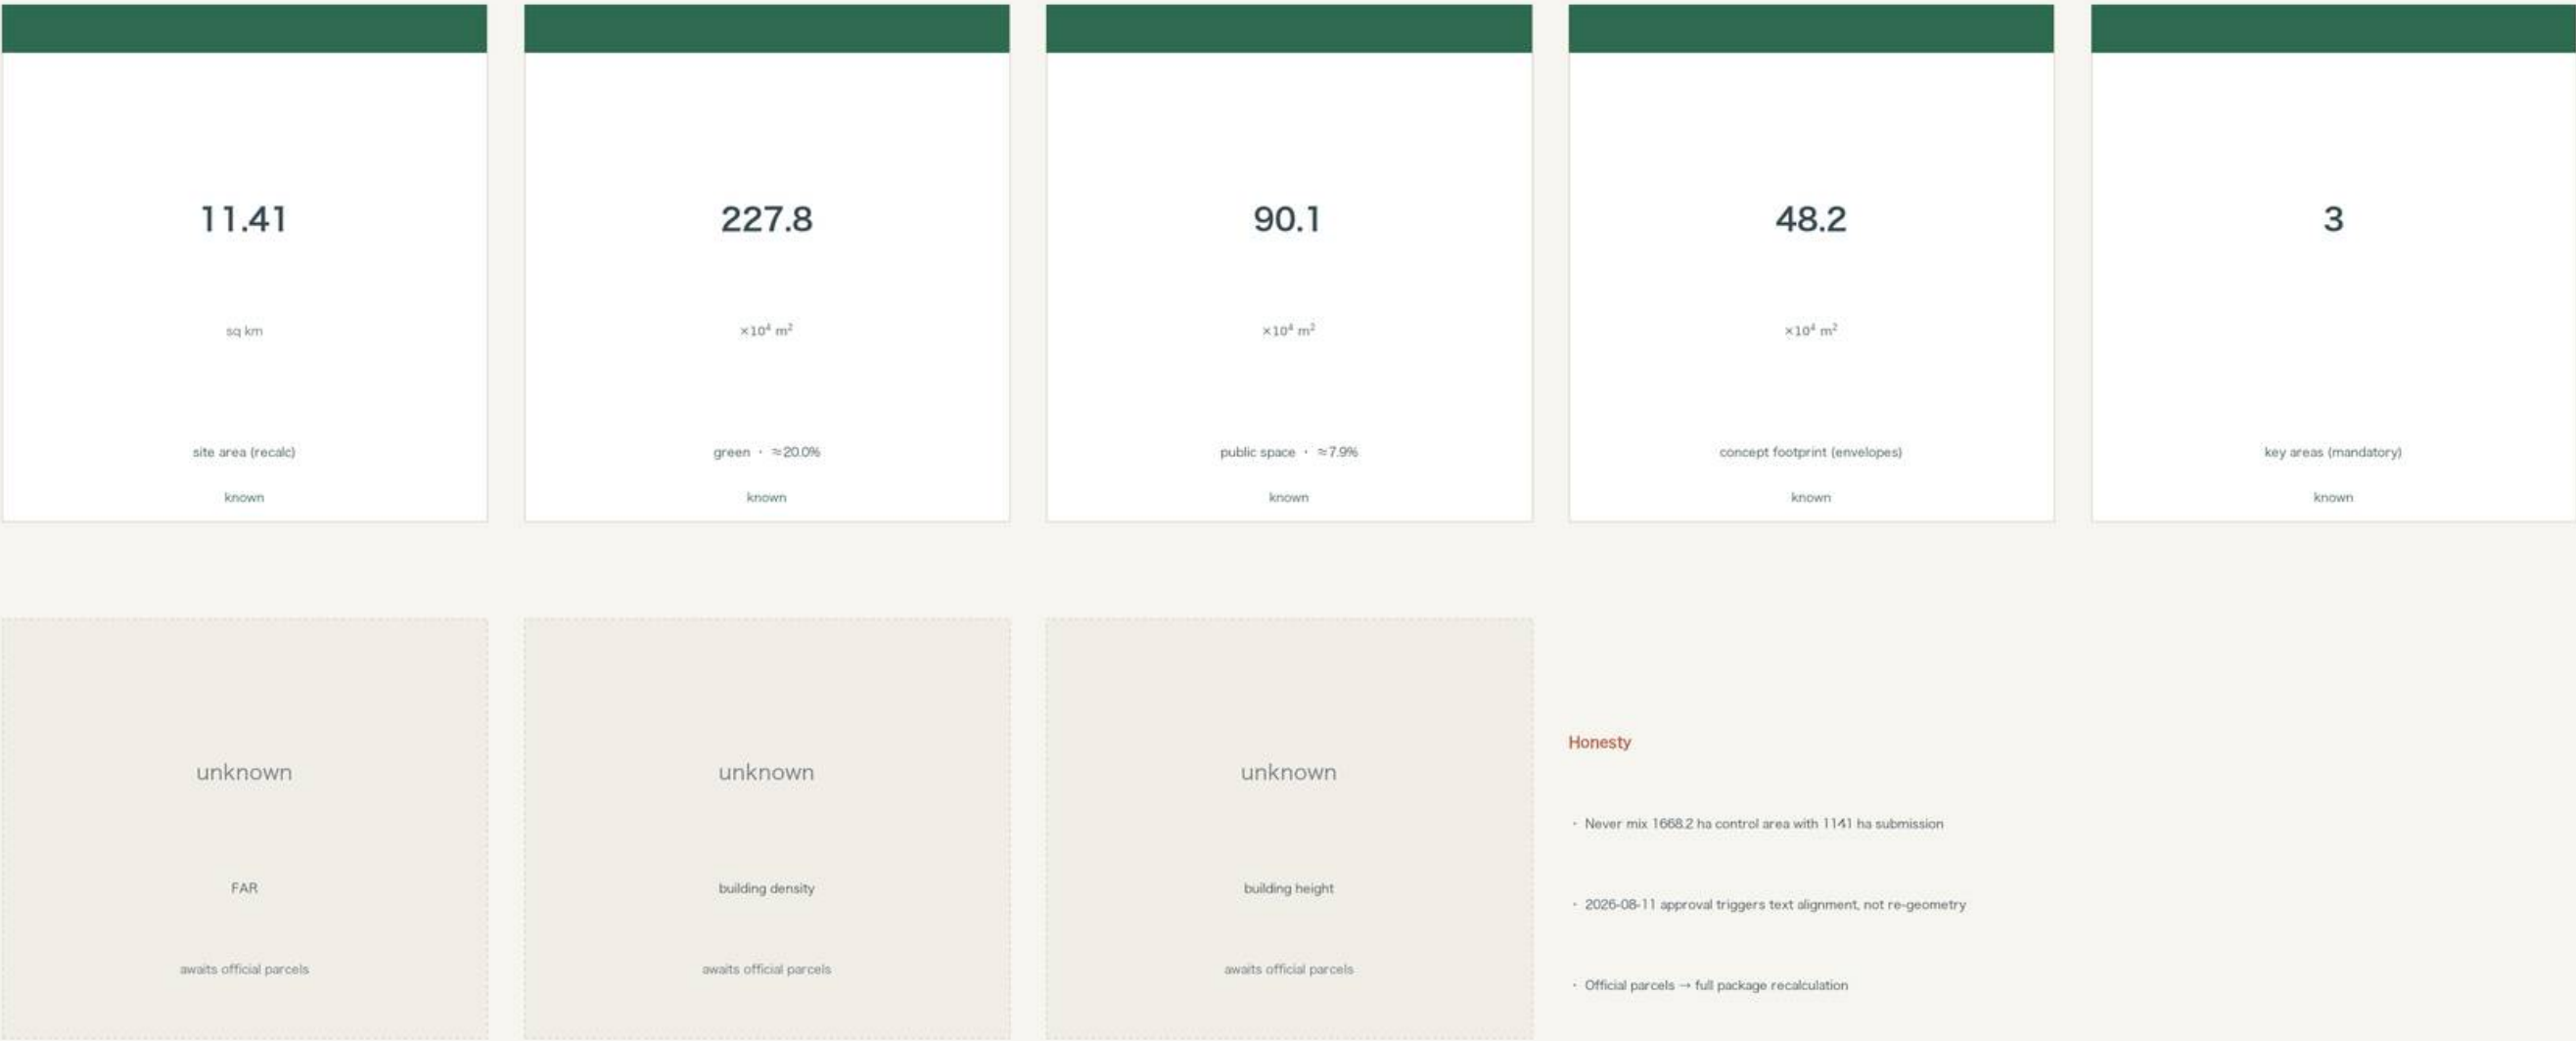

16 Ecological commitments in numbers: verifiable targets each phase

What is recalculated, what still awaits official data

Type 1 recalculated (provisional) • Type 2 structure known / intensity unknown • Type 3 performance in assumptions

Public space first, intensity follows: 0 - 1 • 1 - 3 • 3 - 10 yrs

Same actions as OL-01 - 10 • phasing is not a funding plan | real OSM fabric | dashed = not yet built

0 - 1 yr • prototype

1 - 3 yr • streets

3 - 10 yr • network

0 - 1 yr • prototype

- Arrival first
- KMD + M-stitch sample
- Single station prototype

1 - 3 yr • streets

- One unit cluster opens
- Native street pilot
- License window & hall

3 - 10 yr • network

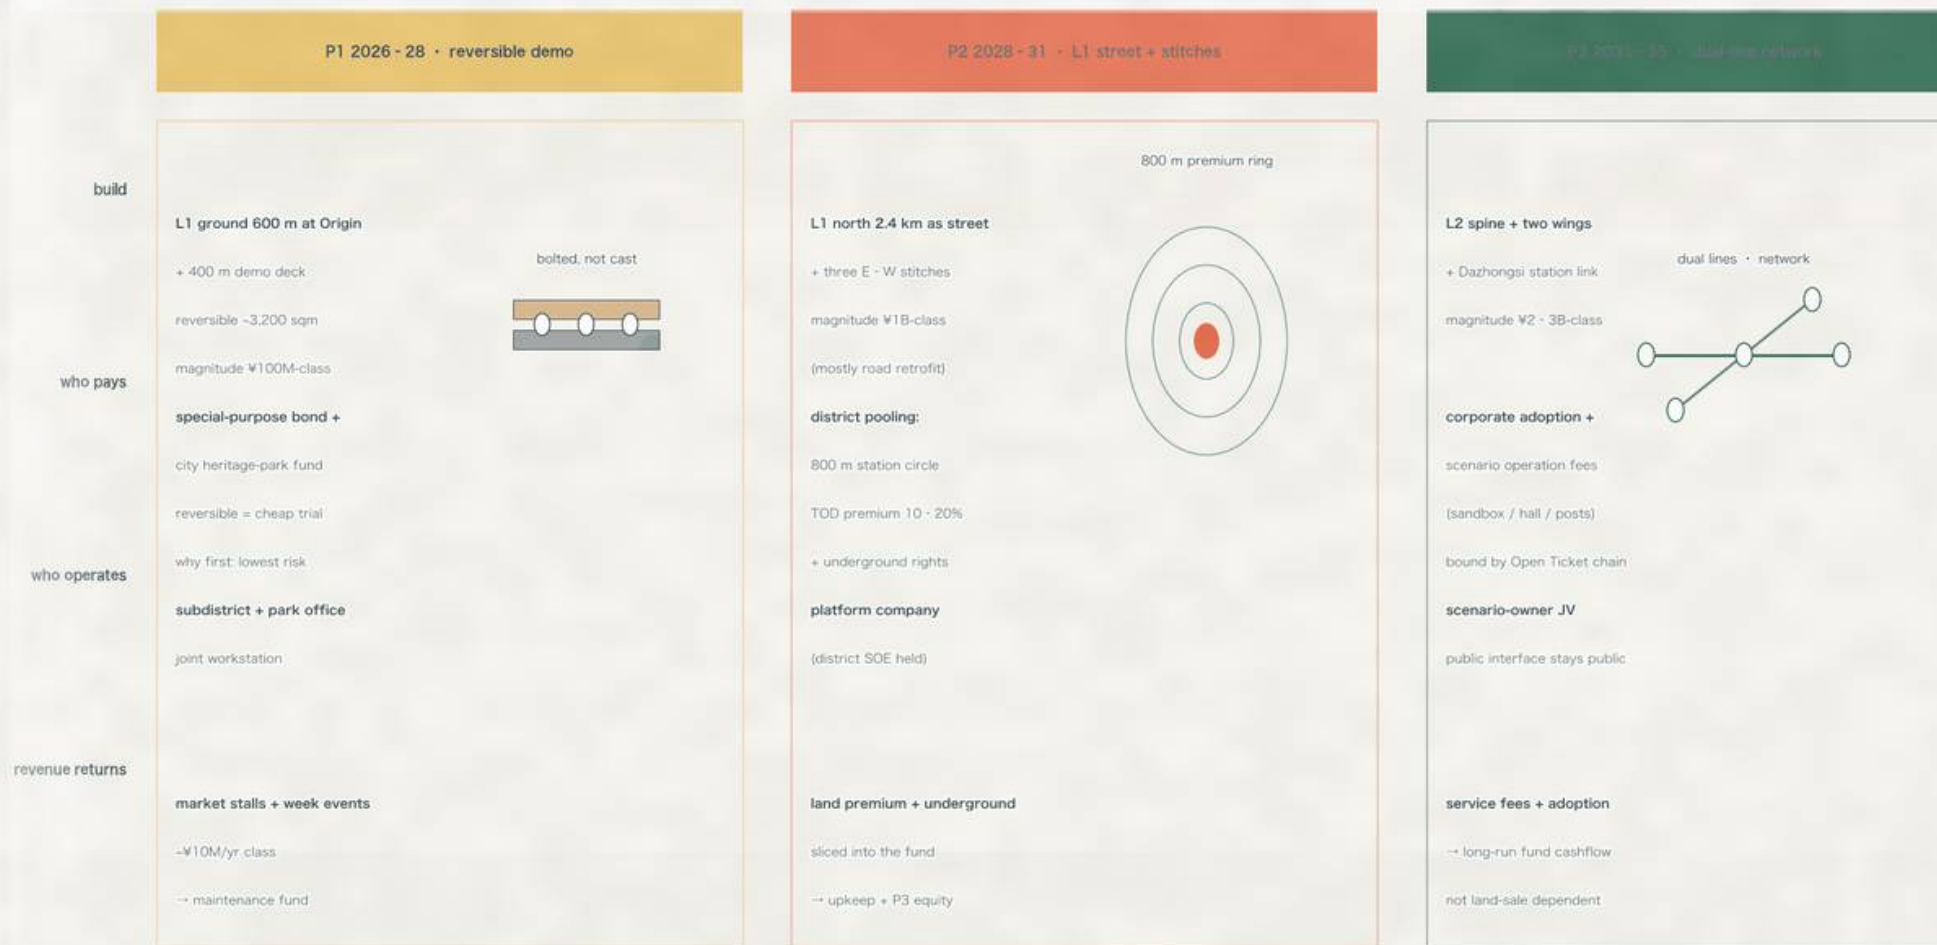

- Three-area network
- OL-07 deck mid-term
- Governance center

OPENLINE-100 • key-phasing • 0 - 1 / 1 - 3 / 3 - 10 on real fabric • BOARD v1.2

20 Phasing: 2026 ☒ 2030 ☒ 2035

Capital logic of phasing: reversibility is low risk

Each phase answers build / pay / operate / return | bond → pooling → adoption relay | magnitude only, A-CAPITAL-001

Return loop: land premium (TOD) → underground rights → scenario fees → public maintenance fund → back to street & deck

order-of-magnitude only • A-CAPITAL-001 unit-cost bands • not a cost plan; recalc after redlines

OPENLINE-100 • phasing-capital • magnitude logic, not a cost plan • BOARD v1.2

Three financing scenarios • relay, not either-or

- A • special bond

fits P1 demo

fast, low cost

risk: no O&M source

B • district pooling

fits P2 street

TOD premium + underground

risk: land-market cycle

C • corporate adoption

fits P3 & long-run O&M

scenario fees • naming

risk: publicness ceded →

backstopped by Open Ticket

What reversibility buys

deck unbolts → asset relocates

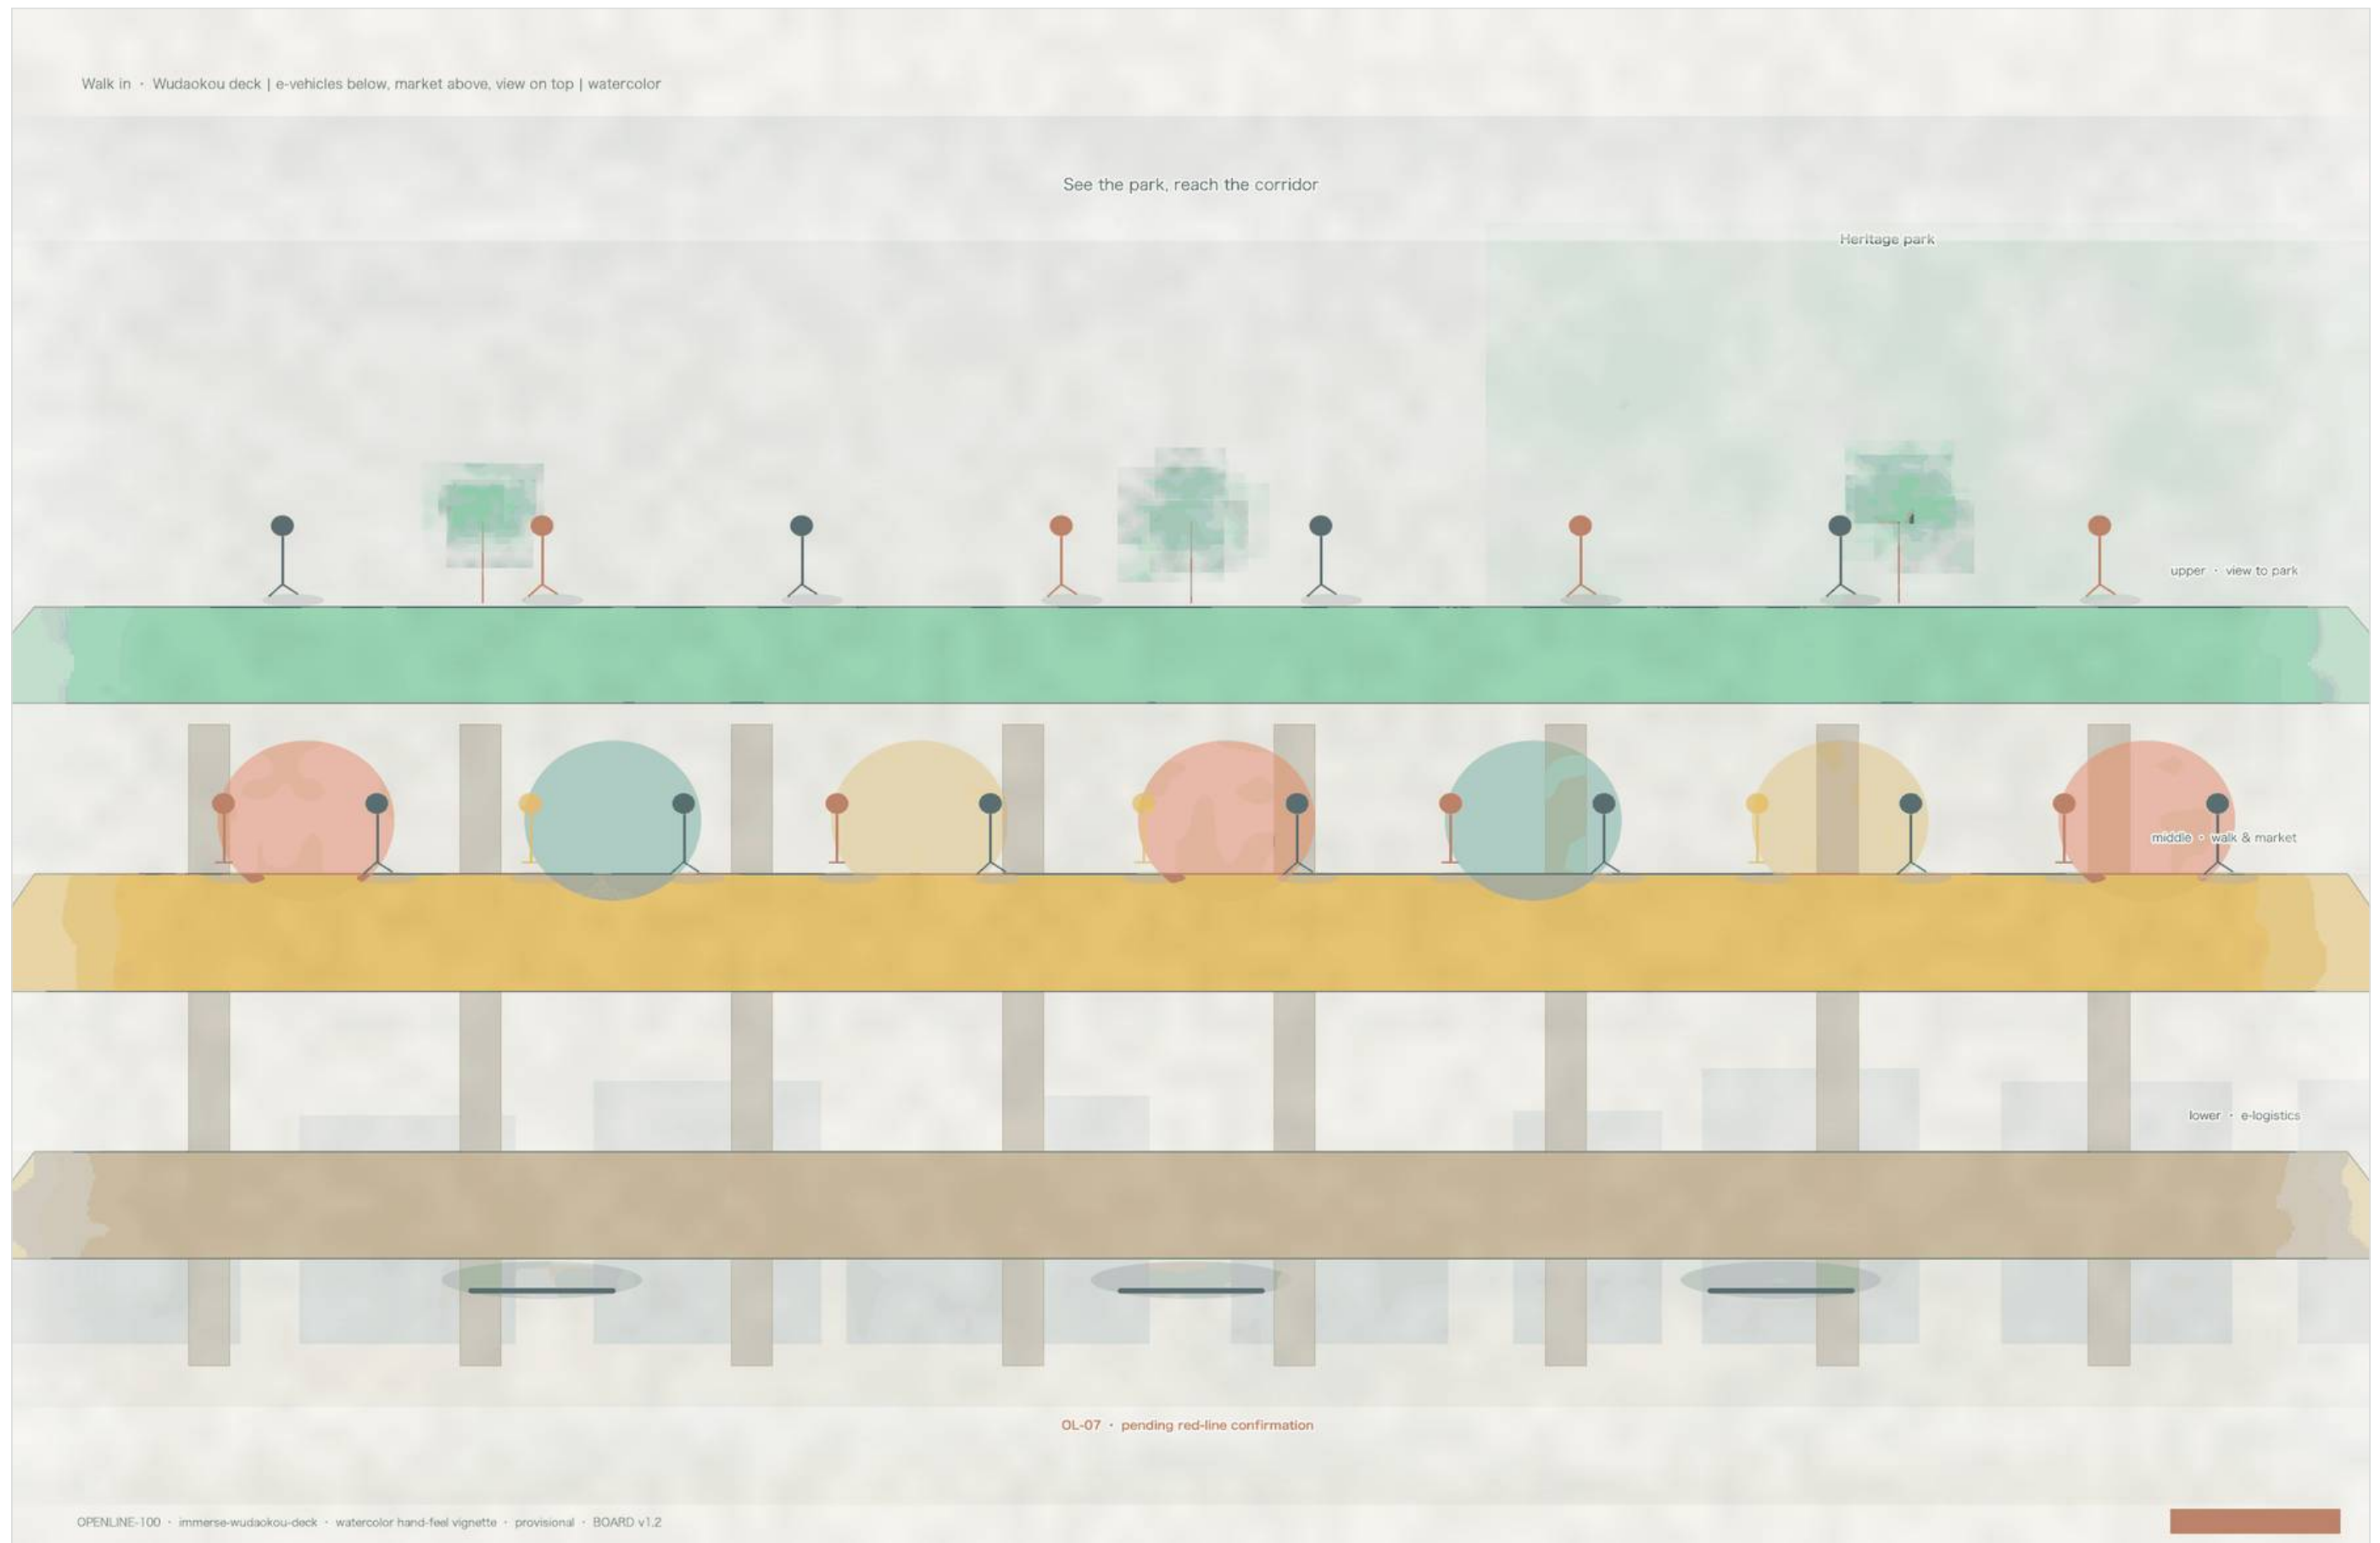

a wrong demo is not sunk cost

the real reason to go first
