

Rail Commons: Haidian Public Space Revival

A3 Proposal Booklet / Conceptual Recommendation

01 Rail Commons: Public-Space Repair Loops

Verified small repairs connect three scope levels; provisional geometry stays in the background

PASS / PAUSE / PARTICIPATE

The proposal does not invent another grand axis. It links entrances, crossings, places to pause, service edges and memory interfaces into reversible, auditable repair loops.

- 01 Field baseline first
- 02 Human and paper fallback
- 03 Stop, restore, retest

- Repair greenway
- Accountable node
- Provisional constraint

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

- Three scope levels, five repair interfaces, human fallback and stop conditions form one accountability chain.

Design Basis and Evidence Boundary

official / provisional / derived / pending

05 Metric Evidence Chain: Known, Derived and Pending

Numbers share one GeoJSON source; they are provisional intake evidence, not statutory controls

PENDING OFFICIAL DATA

Official polygons, FAR, height, road redlines, station anchors, building/ownership survey, heritage controls, utilities, accessibility and resident baselines.

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

- Official tasks and standards set objectives; provisional polygons support intake only; design-derived values are not official controls.

Overall Structure and Land-Use Working Layer

PASS / PAUSE / PARTICIPATE

02 Land Use as a Public-Value Working Layer

Shared-edge cells cover the site; every use remains subject to official polygons and controls

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

■ Shared-edge cells secure topology; public-space repair loops carry everyday experience.

Walking, Cycling and Blue-Green Network

Six operating states

04 Walking, Cycling and Blue-Green Space: Repair Before Expansion

Routes are conceptual relationships; station, road, heritage and drainage evidence remains pending

OPERATING STATES

- 01 日常 / Everyday
- 02 高温 / Heat
- 03 降雨 / Rain
- 04 夜间 / Night
- 05 活动 / Event
- 06 故障 / Failure

STOP CONDITION

No responsible steward, no consent, safety/privacy anomaly, or no non-digital fallback: stop, restore, review.

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

■ Everyday, heat, rain, night, event and failure states retain human takeover and restoration paths.

Detailed Design of Three Key Areas

Scale-free interface reference packages

03 Three Key Areas, Three Public-Realm Responsibilities

Roles follow the brief; provisional rectangles are not station, road or parcel boundaries

01

Zhongzhiyuan

Garden Lab Commons

■

Open protocol desk

■

Reversible test garden

■

Public AI-governance studio

PROV-KEY-001

Re-anchor after official polygon

Every scenario retains human, paper and stop paths

02

Beijing AI Origin Community

Learning Porch

■

Near-campus learning interface

■

Human service fallback

■

Low-disturbance renewal

PROV-KEY-002

Re-anchor after official polygon

Every scenario retains human, paper and stop paths

03

Dazhongsi

Urban Civic Exchange

■

Four-direction walking concept

■

Enterprise and public service

■

Contribution and honor display

PROV-KEY-003

Re-anchor after official polygon

Every scenario retains human, paper and stop paths

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

■ Zhongzhiyuan: Garden Lab Commons; AI Origin: Learning Porch; Dazhongsi: Urban Civic Exchange.

AI Scenarios, Personas and Governance

3 TVS + 9 everyday scenarios

- Six personas: residents/older adults, accessibility users, students/researchers, founders/developers, stewards and visitors.
- Every AI service minimizes data, retains an equivalent non-digital service, and provides appeal and shutdown mechanisms.

Renewal Projects and Reference Phasing

P0 baseline → P1 reversible trial → P2 professional deepening

- Eight projects state who acts, for whom, when, with what resource/threshold, and how outcomes are checked.
- The phasing is not a government commitment; no owner, baseline or recovery plan means NO-GO.

Metrics, Risks and Recalculation

本地 gate: deterministic / spatial / visual / professional

05 Metric Evidence Chain: Known, Derived and Pending

Numbers share one GeoJSON source; they are provisional intake evidence, not statutory controls

PENDING OFFICIAL DATA

Official polygons, FAR, height, road redlines, station anchors, building/ownership survey, heritage controls, utilities, accessibility and resident baselines.

Source: package GeoJSON, metrics and matrices. Provisional constraint; not an official boundary or engineering conclusion.

- When official polygons arrive, replace and recompute the full package, not a single boundary file.
