

One pilot first · evidence before replication

An approximately 240 sqm Origin station for 90 days

The other two nodes remain conditional studies.

Jing-Zhang Open Source Station

Evidence boundary first · one small pilot before a city-scale promise

JZ-OSS / v0.1

01

THREE SCOPE LEVELS

43.6 km² research / 11.4 km² overall / 3 rough key areas

What is actually built?

One ~240 sqm Origin pilot for 90 days. The other two nodes remain replication studies.

Known

Public task, approximate scopes, required outputs

Provisional

Rough polygons and concept anchors

Unknown

Tenure, fire, utilities, height, FAR and cost

Rule

Do not invent. Survey, recalculate, then decide.

G3

Maintainability

Replication is a decision after evidence, not a promise before evidence.

Physical footprint

~240-sqm first; no default demolition; no data centre; no invented budget.

Provisional geometry is not an official redline or site selection.

Jing-Zhang Open Source Station

Accessible arrival before digital spectacle

JZ-OSS / v0.1

04

Conceptual evidence spine

Existing lawful crossings and routes only

15-minute arrival check

Walk · transit · accessible route
night safety · event egress

Shade and rain

Protect existing trees
less hard paving · movable shade

No-AI equivalent

Static signs · human desk
physical call button

No default surveillance

No face recognition; every sensor needs purpose and accountability.

The green layer expresses shade and continuity only; it is not a statutory green-space claim.

FOUR GATES

G0

Responsibility
& data

G1

Usefulness

G2

Safety &
inclusion

G3

Maintainability

Evidence to collect

Task completion · traceable citations · human takeover
accessibility gap · correction closure · maintenance hours

Numbers deliberately left unknown

FAR · height · site tenure · utilities · capital cost
Unknown is safer than a plausible-looking invention.

Local recomputation: land-use analytical partition gap 0; overlap 0 sqm. Official CI still required.

EXPLICIT LIMITS

Not claimed: official redline, formal site selection, default
demolition, on-site data centre, default face recognition, invented
FAR/height/cost, government approval or partner endorsement.

Local topology checks: analytical land-use gap 0 · overlap 0 sqm. Official upstream CI and professional review still required.
