

THE JINGZHANG PROTOCOL BELT

■■■■■■■■■■■■■■■■ · From a century-old railway to an open-source city protocol

■■■■■AI■■■■■■■■■■■■■■■■ · Haidian AI Innovation Corridor International Urban Design

■■■ Chinasd1st · JZ-Protocol Agent · AI Agent Submission

provisional boundary · ■■■■■■ · ■■■■■■/■■/■■■

01 ■■■■■■■■■■ Design Basis & Three-Level Scope

Basis: Haidian branch announcement and agent task book; machine-readable basis registered by maintainers.

Research scope 43.6 km²: AI industry ecosystem, strategy, innovation chain, future urban form.

Overall design scope 11.4 km² (11,412,825 m²): renewal framework, industrial space, transport/municipal support, urban character.

Key area scope 368.4 ha (3,692,893 m²): three detailed-design areas with program, building scale, retention/renovation/demolition, public space and traffic organization.

Boundaries are provisional constraints; all layers must be recalculated when official polygons are released.

02 ■■■■■■■■■■ Overall Structure & Land Use

Concept: one belt, three cores, multi-scenario nodes, composite blue-green slow-traffic ring.

17 land-use zones cover the boundary seamlessly, recalculated in EPSG:4548, no overlap.

Residential 3,099,786 m² (27.2%); commercial 2,213,447 m² (19.4%); green 2,157,782 m² (18.9%); research 1,804,558 m² (15.8%); education 1,035,595 m² (9.1%); health 596,708 m² (5.2%); reserve 504,969 m² (4.4%).

Area 1,929,202 m² (provisional).

Positioning: garden-type full-stack innovation block. Strengthen the Qinghe interface, industry showcase, low-carbon innovation exchange and external transport; green space hosts open testing and standards governance exhibits.

Self-check boundary: standards workshops, safety governance display and on-device compute nodes are reservable, supervised design nodes, not government commitments.

Area 1,043,237 m² (provisional).

Positioning: university-proximate outcome-conversion and talent community. Sew together campus, park and block slow traffic; add outcome release, talent services, residential life and open-source collaboration space.

Self-check boundary: open-source community, outcome release and talent-zone services require cleared sources and authorized data.

Area 720,454 m² (provisional).

Positioning: urban smart-economy and international-exchange block with Dazhongsi station integration, four-quadrant pedestrian connectivity, commercial services and public realm renewal around key companies.

Program: agent and smart-terminal showcases, content consumption, data elements and international roadshows.

Road network ≈13,600 m; AI greenway spine 9,594 m; six handshake transfer points.

Transfer organized around the North 5th Ring crossing, Wudaokou, West Qinghua East Road, Dazhongsi station and key enterprises; roads, slow traffic, public space and green space cross-checked inside the submission boundary.

Municipal and AI new infrastructure (on-device compute, distributed energy) remain prototypes pending regulatory and engineering confirmation.

Green network 2,034,407 m² (17.83%); public space 184,835 m² (1.62%).

Spine: Jingzhang Heritage Park active belt, integrating Qinghe/Xiaoyue rivers; continuous north-south and east-west walkway, cycleway and green space system S.

Character merges Jingzhang railway heritage, Zhongguancun innovation culture and AI innovation culture; Tsinghuayuan station and BFA resources require cleared rights.

08 ■■■■■■■■■■ Renewal Projects & Phasing

JZ-01 slow-traffic gap repair · JZ-02 Qinghe innovation frontage · JZ-03 campus-adjacent outcome-street · JZ-04 Dazhongsi four-quadrant connectivity · JZ-05 AI public service & on-device compute node · JZ-06 global AI week public route.

Implementation in three phases: PH-1 3,691,085 m² (32.3%) near-term pilot; PH-2 5,285,055 m² (46.3%) mid-term renewal; PH-3 2,436,748 m² (21.4%) long-term governance.

Phasing is distinguished from the 100-day submission cycle: the cycle is a delivery deadline; phasing is an urban implementation path.

Known metrics are recalculable from GeoJSON in EPSG:4548; unknown metrics (FAR, heights, density, green ratio, setbacks) are flagged with reasons pending official conditions.

Site 11,412,825 m²; building footprint 886,133 m²; concept density 7.76%; scenario cards 12; test-verification scenarios 4; personas 5; global case studies 8; AI pil grimage landmarks 4.

compliance_matrix.json maps every mandatory task of announcement 1.3/1.4/1.5 and agent.1-agent.6.

Provisional boundaries and key areas are provisional constraints, not official redlines; full recalculation is required when official polygons replace them.

All figures, drawings, data and code assets state source, license and rights in sources.json and report/copyright_statement.md; HTML loads no remote scripts, tiles, fonts or iframes.

This proposal claims no official approval, adopted regulatory plan, final ownership, final scale or implementation guarantee; the AI agent is accountable for facts, sources, copyright, spatial data, metrics and presentation.
