

Diameter AI Innovation Belt

Centennial Jing-Zhang AI Innovation Belt

Urban Design Proposal

Professional Design Package

Submitter: PKU-FranklinWang

Package Type: Professional Design Package

Version: v5.13.2

Language: English

Date: 2026-09-04

*All spatial implementation suggestions are conceptual proposals, reference plans, or topics for professional teams to further study.
They do not substitute for formal planning or constitute government-approved conclusions.*

Core Concept & Spatial Structure

Figure 1 · Overall Spatial Structure — One Diameter · Three Cores · Two Rings · Multi-Yards

Concept Introduction

The proposal takes "Diameter" as the core concept, upgrading the Jing-Zhang Railway Heritage Park from a linear green belt into the "Jing-Zhang Innovation Diameter" — the technological innovation central axis of western Beijing, forming an east-west symmetry with the eastern traditional ritual central axis. Together they constitute Beijing's dual-central-axis urban pattern: "one ancient, one modern; one cultural, one technological."

Spatial Structure

- One Diameter: Jing-Zhang Heritage Park as the innovation spine, running north-south through Zhongzhiyuan, AI Origin Community, and Dazhongsi
- Three Cores: North Core (Zhongzhiyuan — basic research & incubation), Central Core (AI Origin — technology source & talent vitality), South Core (Dazhongsi — industry transformation & application)
- Two Rings: North Innovation Ring (Xueyuanlu-Gate of Peace), South Industry Ring (Jimen-Dazhongsi)
- Multi-Yards: Distributed innovation courtyards as grassroots innovation units

Theoretical Foundation

Based on New Spatial Economics theory — "spatial quality enhancement → dynamic talent agglomeration → industrial innovation development" — the design uses quality gradient as the core driving mechanism to attract innovative talents and promote knowledge exchange along the diameter.

Note: Spatial structure is conceptual. Final boundaries subject to statutory planning.

Three Key Areas Detailed Designs

Zhongzhiyuan · AI Origin · Dazhongsi

Figure 2 · Three Key Areas Masterplan

A1 Zhongzhiyuan AI Autonomous Innovation Accelerator (192.1 ha)

Positioning: Core bearing area of AI full-stack autonomous innovation system, first stop for university achievement transformation in Xuebei yuan. Low-density, garden-style innovation park with basic research platforms, startup incubation acceleration, university-industry-research integration zones, and young scientist communities.

A2 Beijing AI Origin Community (104.3 ha, Wudaokou + Zhichunlu)

Positioning: Core of AI technology source and talent vitality, energy hub of the innovation diameter, destination for global AI young talents. High-intensity, high-density, high-mixed urban core, 24-hour vibrant district, three-dimensional pedestrian system connecting metro, commerce, offices, and residences.

A3 Dazhongsi AI Industry Cluster (72.0 ha)

Positioning: Gateway for AI industry implementation and application promotion, southern gateway image showcase. Portal landmark image, AI leading enterprise headquarters, AI+ industry application solution center, efficient transport connections.

Note: All area figures are conceptual estimates. Spatial boundaries are for reference only.

Mobility, Slow Traffic & Blue-Green Space System

Figure 3 · Mobility & Blue-Green Space System

Green Transportation System

- Build a "rail-dominated, slow-traffic priority, smart-enabled" green transport system, green travel ratio $\geq 85\%$
- Construct running paths, bike lanes, walking paths + green landscape along Jing-Zhang Heritage Park
- One east-west slow-traffic corridor every 500m, stitching together spaces on both sides of the railway
- Smart signal systems, autonomous driving test roads, dedicated unmanned delivery lanes

Blue-Green Ecological Pattern

- "One Spine, Three Corridors, Multiple Points" ecological pattern: Jing-Zhang Heritage Park green spine + three north-south ecological corridors
- Per capita park green area ≥ 18 sqm/person, 500m park green space service radius coverage 100%
- Sponge city construction, annual runoff total control rate $\geq 85\%$
- 100% of core area buildings reach 2-star green building standard, 100% 3-star in core zone

Note: Metrics are conceptual targets. Actual values subject to detailed planning.

AI Innovation Ecosystem & Key Metrics

Figure 4 · Key Metrics Overview

AI+ Scenario System (≥10 Scenario Cards)

Scenario	Type	Location
AI+ Smart Transport	Transport Testing	AI Origin Community
AI+ Healthcare	Public Service	Zhongzhiyuan
AI+ Education	Talent Cultivation	AI Origin · Wudaokou
AI+ Government	Governance Innovation	Dazhongsi
AI+ Manufacturing	Industry Application	Dazhongsi Cluster
AI+ Art & Culture	Creative Industry	AI Origin · Zhichunlu
AI+ Smart City	Urban Governance	Along the Diameter
AI+ Green Building	Sustainable Design	All Key Areas
AI+ Financial Services	Financial Innovation	AI Origin Community
AI+ Scientific Research	Basic Research	Zhongzhiyuan

Core Innovation Metrics

- AI enterprise count: 3,000+ (target) | AI industry workforce: 250,000+ (target)
- AI unicorn enterprises: 40 | AI+ vertical field leading enterprises: 100
- Green travel ratio ≥ 85% | Per capita park green area ≥ 18 sqm/person
- 15-minute community life circle coverage: 100% | Sponge city compliance: ≥ 85%

Note: All metrics are conceptual targets. Subject to professional assessment.

Implementation Path & Operation Mechanism

Phased Implementation Plan

Phase	Timeframe	Key Tasks
Initiation Phase	2026-2027	• Lay foundation, build image, showcase models • Comprehensive urban design and regulatory planning • Launch landmark demonstration projects • Establish AI innovation governance mechanism
Acceleration Phase	2028-2030	• Full rollout of infrastructure and public space • Accelerate enterprise and talent agglomeration • Complete three core area construction • Form initial innovation ecosystem
Maturation Phase	2031-2035	• Complete full diameter construction • Form world-class AI innovation belt • Operation mechanism fully mature • Become national model for AI urban design

Operation Mechanism

- Government guidance, market operation, multi-party participation — establish a diversified co-governance model
- AI co-creation platform — AI Conjecture Rankings, challenge-based system, innovation achievement sharing
- Public interest priority — ensure innovation dividends benefit all citizens, public space remains 100% open and free
- Human-in-the-loop governance — AI removability, non-smart equivalent paths, manual review as bottom-line guarantee

This proposal is AI-assisted and human-reviewed. All spatial boundaries are conceptual illustrations only (v5.13.2 optimized). All spatial implementation suggestions are conceptual proposals, reference plans, or topics for professional teams to further study. They do not substitute for formal planning or constitute government-approved conclusions.
